The Secret Is Selling Not Closing. Closing Is the Result of Effective Selling. Joel Pinero, 2016-04-28. My intention in this book is to provide an innovative perspective and approach of what is a must in the sales process so that you, the sales professional, can be more effective in closing deals in today's market. The information in this book shies away from the high-pressure, old sales tactics. The sales principles that I will share when applied correctly will give you the power to change your sales career and financial future forever. The strategies I will share with you in this book will increase your opportunities of achieving more easily closed sales. The book will show you that we, as sales professionals, need to get out of the way of making the sale by following the correct sales sequence. In many of my coaching sessions we have found that the reason the prospects don't purchase is the salesperson. Let me be your coach on why people buy, why people buy today, and why people buy now. Highlights: The name of the game is selling, not closing. There are no new words in sales. The magic of selling is on the sequence. Telling is not selling; selling is influencing. Objections: The difference between pressure and urgency are they the same? The battle of the guilts. Breaking the old myths.

life case studies **Life's Greatest Secret** Matthew Cobb, 2015-07-07 Everyone has heard of the story of DNA as the story of Watson and Crick and Rosalind Franklin but knowing the structure of DNA was only a part of a greater struggle to understand life's secrets. Life's Greatest Secret is the story of the discovery and cracking of the genetic code, the thing that ultimately enables a spiraling molecule to give rise to the life that exists all around us. This great scientific breakthrough has had far-reaching consequences for how we understand ourselves and our place in the natural world and for how we might take control of our and life's future. Life's Greatest Secret mixes remarkable insights, theoretical dead ends, and ingenious experiments with the swift pace of a thriller. From New York to Paris, Cambridge Massachusetts to Cambridge England and London to Moscow, the greatest discovery of twentieth-century biology was truly a global feat. Biologist and historian of science Matthew Cobb gives the full and rich account of the cooperation and competition between the eccentric characters, mathematicians, physicists, information theorists, and biologists who contributed to this revolutionary new science. And while every new discovery was a leap forward for science, Cobb shows how every new answer inevitably led to new questions that were at least as difficult to answer. Just ask anyone who had hoped that the successful completion of the Human Genome Project was going to truly yield the book of life or that a better understanding of epigenetics or junk DNA was going to be the final piece of the puzzle. But the setbacks and unexpected discoveries are what make the science exciting, and it is Matthew Cobb's telling that makes them worth reading. This is a riveting story of humans exploring what it is that makes us human and how the world works, and it is essential reading for anyone who'd like to explore those questions for themselves.
