Serial Rings:

Serial Rings G. Puninski, 2012-12-06 The main theme in classical ring theory is the structure theory of rings of a particular kind For example no one text book in ring theory could miss the Wedderburn Artin theorem which says that a ring R is semisimple Artinian iff R is isomorphic to a finite direct sum of full matrix rings over skew fields This is an example of a finiteness condition which at least historically has dominated in ring theory If we would like to consider a requirement of a lattice theoretical type other than being Artinian or Noetherian the most natural is uni seriality Here a module M is called uni serial if its lattice of submodules is a chain and a ring R is uni serial if both R_R and ${}_R R$ are uni serial modules The class of uni serial rings includes commutative valuation rings and is closed under homomorphic images But it is not closed under direct sums nor with respect to Morita equivalence a matrix ring over a uni serial ring is not uni serial There is a class of rings which is very close to uni serial but closed under the constructions just mentioned serial rings A ring R is called serial if R_R and ${}_R R$ is a direct sum necessarily finite of uni serial modules Amongst others this class includes triangular matrix rings over a skew field Also if F is a finite field of characteristic p and G is a finite group with a cyclic normal p Sylow subgroup then the group ring FG is serial

Algebras, Rings and Modules Michiel Hazewinkel, Nadiya Gubarenko, V.V. Kirichenko, 2006-01-18

Associative rings and algebras are very interesting algebraic structures In a strict sense the theory of algebras in particular noncommutative algebras originated from a single example namely the quaternions created by Sir William R Hamilton in 1843 This was the first example of a noncommutative numbers system During the next forty years mathematicians introduced other examples of noncommutative algebras began to bring some order into them and to single out certain types of algebras for special attention Thus low dimensional algebras division algebras and commutative algebras were classified and characterized The first complete results in the structure theory of associative algebras over the real and complex fields were obtained by T Molien E Cartan and G Frobenius Modern ring theory began when J H Wedderburn proved his celebrated classification theorem for finite dimensional semisimple algebras over arbitrary fields Twenty years later E Artin proved a structure theorem for rings satisfying both the ascending and descending chain condition which generalized Wedderburn structure theorem The Wedderburn Artin theorem has since become a cornerstone of noncommutative ring theory The purpose of this book is to introduce the subject of the structure theory of associative rings This book is addressed to a reader who wishes to learn this topic from the beginning to research level We have tried to write a self contained book which is intended to be a modern textbook on the structure theory of associative rings and related structures and will be accessible for independent study

endomorphism rings quantum groups Morita contexts generalizations of injectivity and Cartan matrices Advances in Ring Theory S.K. Jain, Rizvi S. Tariq, 2012-12-06 **Foundations of Module and Ring Theory** Robert Wisbauer, 2018-05-11 This volume provides a comprehensive introduction to module theory and the related part of ring theory including original results as well as the most recent work It is a useful and stimulating study for those new to the subject as well as for researchers and serves as a reference volume Starting from a basic understanding of linear algebra the theory is presented and accompanied by complete proofs For a module M the smallest Grothendieck category containing it is denoted by $\mathcal{O}M$ and module theory is developed in this category Developing the techniques in $\mathcal{O}M$ is no more complicated than in full module categories and the higher generality yields significant advantages for example module theory may be developed for rings without units and also for non associative rings Numerous exercises are included in this volume to give further insight into the topics covered and to draw attention to related results in the literature **Index of Trademarks Issued from the United States Patent Office**, 1952 Handbook of Algebra, 2003-10-15 Handbook of Algebra **FPF Ring Theory** Carl Faith, Stanley Page, 1984-04-26 This work includes all known theorems on the subject of noncommutative FPF rings

Module Theory Alberto Facchini, 2012-02-03 This book presents topics in module theory and ring theory some such as Goldie dimension and semiperfect rings are now considered classical and others more specialized such as dual Goldie dimension semilocal endomorphism rings serial rings and modules **Index of Trademarks Issued from the United States Patent and Trademark Office**, 1950 Noncommutative Rings and Their Applications Steven Dougherty, Alberto Facchini, Andre Gerard Leroy, Edmund Puczyłowski, Patrick Sole, 2015-02-20 Contains the Proceedings of an International Conference on Noncommutative Rings and Their Applications held July 1-4 2013 at the Universite d Artois Lens France It presents recent developments in the theories of noncommutative rings and modules over such rings as well as applications of these to coding theory enveloping algebras and Leavitt path algebras *Algebra* I.B.S. Passi, 2012-12-06 The Indian National Science Academy has planned to bring out monographs on special topics with the aim of providing accessible surveys reviews of topics of current research in various fields Prof S K Malik FNA Editor of Publications INSA asked me in October 1997 to edit a volume on algebra in this series I invited a number of algebraists several of them working in group rings and it is with great satisfaction and sincere thanks to the authors that I present here in Algebra Some Recent Advances the sixteen contributions received in response to my invitations I B S Passi On Abelian Difference Sets K r Arasu and Surinder K Sehgal 1 Introduction We review some existence and nonexistence results new and old on abelian difference sets Recent surveys on difference sets can be found in Arasu 1990 Jungnickel 1992a b Pott 1995 Jungnickel and Schmidt 1997 and Davis and Jedwab 1996 Standard references for difference sets are Baumert 1971 Beth et al 1998 and Lander 1983 This article presents a flavour of the subject by discussing some selected topics Difference sets are very important in combinatorial design theory and in communication engineering while designing sequences with good correlation properties Our extended bibliography

covers a wide variety of papers written in the area of difference sets and related topics **Model Theory of Modules, Algebras and Categories** Alberto Facchini, Lorna Gregory, Sonia L'Innocente, Marcus Tressl, 2019-05-31 This volume contains the proceedings of the international conference Model Theory of Modules Algebras and Categories held from July 28 August 2 2017 at the Ettore Majorana Foundation and Centre for Scientific Culture in Erice Italy Papers contained in this volume cover recent developments in model theory module theory and category theory and their intersection

Semidistributive Modules and Rings A.A. Tuganbaev, 2012-12-06 A module M is called distributive if the lattice $\text{Lat } M$ of all its submodules is distributive i.e. $F \cap G \cap H = (F \cap G) \cap H = F \cap (G \cap H)$ for all submodules F, G and H of the module M A module M is called uniserial if all its submodules are comparable with respect to inclusion i.e. the lattice $\text{Lat } M$ is a chain Any direct sum of distributive resp. uniserial modules is called a semidistributive resp. serial module The class of distributive resp. semidistributive modules properly contains the class of all uniserial resp. serial modules In particular all simple resp. semisimple modules are distributive resp. semidistributive All strongly regular rings for example all factor rings of direct products of division rings and all commutative regular rings are distributive all valuation rings in division rings and all commutative Dedekind rings e.g. rings of integral algebraic numbers or commutative principal ideal rings are distributive A module is called a Bezout module or a locally cyclic module if every finitely generated submodule is cyclic If all maximal right ideals of a ring A are ideals e.g. if A is commutative then all Bezout A modules are distributive **Rings and Categories of Modules** Frank W. Anderson, Kent R. Fuller, 2012-12-06 This book is intended to provide a reasonably self contained account of a major portion of the general theory of rings and modules suitable as a text for introductory and more advanced graduate courses We assume the familiarity with rings usually acquired in standard undergraduate algebra courses Our general approach is categorical rather than arithmetical The continuing theme of the text is the study of the relationship between the one sided ideal structure that a ring may possess and the behavior of its categories of modules Following a brief outline of set theoretic and categorical foundations the text begins with the basic definitions and properties of rings modules and homomorphisms and ranges through comprehensive treatments of direct sums finiteness conditions the Wedderburn Artin Theorem the Jacobson radical the hom and tensor functions Morita equivalence and duality de composition theory of injective and projective modules and semi perfect and perfect rings In this second edition we have included a chapter containing many of the classical results on artinian rings that have helped to form the foundation for much of the contemporary research on the representation theory of artinian rings and finite dimensional algebras Both to illustrate the text and to extend it we have included a substantial number of exercises covering a wide spectrum of difficulty There are of course many important areas of ring and module theory that the text does not touch upon Methods in Module Theory Abrams, 1992-10-16 A collection of articles embodying the work presented at the 1991 Methods in Module Theory Conference at the University of Colorado at Colorado Springs facilitating the explanation and cross fertilization of new techniques that were developed to answer a

variety of module theoretic questions

Semilocal Categories and Modules with Semilocal Endomorphism Rings

Alberto Facchini, 2019-10-23 This book collects and coherently presents the research that has been undertaken since the author's previous book *Module Theory* 1998. In addition to some of the key results since 1995 it also discusses the development of much of the supporting material. In the twenty years following the publication of the Capps-Dicks theorem the work of Facchini, Herbera, Shamsuddin, Puninski, Prihoda and others has established the study of serial modules and modules with semilocal endomorphism rings as one of the promising directions for module theoretic research. Providing readers with insights into the directions in which the research in this field is moving as well as a better understanding of how it interacts with other research areas the book appeals to undergraduates and graduate students as well as researchers interested in algebra.
