Korfhage, 2013-11-11 The interface between the user of a computer based information system and the system itself has been evolving at a rapid rate The use of a video screen with its color and graphics capabilities has been one factor in this evolution The development of light pens mice and other screen image manipulation devices has been another With these capabilities has come a natural desire to find more effective ways to make use of them In particular much work has gone into the development of interface systems that add visual elements such as icons and graphics to text The desire to use these visual elements effectively in communication between the user and the system has resulted in a healthy competition of ideas and discussion of the principles governing the development and use of such elements The present volume chronicles some of the more significant ideas that have recently been presented The first volume in this series on the subject Visual Languages Chang Ichikawa and Ligomenides eds Plenum 1986 covered work done in the early days of the field of visual languages Here we represent ideas that have grown out of that early work arranged in six sections Theory Design Systems Visual Programming Algorithm Animation Simulation Animation and Applications I THEORY Fundamental to the concept of visual languages is the conviction that diagrams and other visual representations can aid understanding and communication of ideas We begin this volume with a chapter by Fanya S      **InfoWorld**, 1986-03-03 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects      **Sleep Related Disorders and Internal Diseases** Jörg H. Peter, Thomas Podszus, P.v. Wichert, 2013-11-11 The normal function of the organism in various stages of activity can be seen as a process of mutual interaction of different regulation mechanisms building up the behaviour of the organism in changing situations and or ages and or levels of health or disease Insights into these very complex relations which steer the action of the organism are particularly important for the study of internal medicine They can be seen as directly related to the understanding of pathological conditions Recently the medical community has focused its interest on the physiology and pathophysiology of events which happen during sleep Although some information on pathological regulation during sleep was collected in the 1930s the modern technology of registration methods is required to analyse the phenomena of sleep related physiological and pathophysiological patterns It is intere

sting that the modern research in this field developed from neuropsychiatry and is now expanding into other fields of medicine although some problems for instance the Pickwickian syndrome were also for a long time considered part of the field of internal medicine It becomes clearer that sleep is not only a neuro psychiatric phenomenon but also has profound consequences for other physio logical circuits perhaps even an important role in pathogenesis Sleep also has profound consequences for internal diseases This was shown very clearly recently by many groups although their data have not yet received the attention which they deserve     *InfoWorld* ,1983-12-26 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects     *InfoWorld* ,1983-12-26 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects     *InfoWorld* ,1994-06-27 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects     **Artificial Behavior** Gene D. parameter variations and uncertainties in system order of elastic structures Fast real time signal processing Generating high dynamic control forces and providing the necessary control power Reliability and safety concepts taking into account the growing role of software within the system The objective of the Symposium has been to present methods that contribute to the solutions of such problems Typical examples are demonstrating the state of the art It intends to evaluate the limits of performance that can be achieved by controlling the dynamics and it should point to gaps in present research and areas for future research Mainly it has brought together leading experts from quite different areas presenting their points of view The International Union of Theoretical and Applied Mechanics IUTAM has initiated and sponsored in cooperation with the International Federation of Automatic Control IFAC this Symposium on Dynamics of Controlled Mechanical Systems held at the Swiss Federal Institute of Technology ETH in Zurich Switzerland May 30 June 3 1988
