Introduction to International Relations Georg Sørensen, Jørgen Møller, Robert H. Jackson, 2022. What are the challenges facing international cooperation to mitigate climate change? Was US foreign policy under President Trump all that different from his predecessors? Are we witnessing world order or world chaos? With an emphasis on theoretical approaches and their application to the real world, this book is the definitive guide to answering such key questions in international relations. Throughout the text, the authors encourage you to engage critically with essential theories by highlighting their strengths, weaknesses, and the major points of contention, helping you to understand how contemporary debates in the discipline are connected with each other and how they are shaping the world in which we live. New to this edition: A new three-part structure brings into clearer focus how theories meet real-world developments. A new final chapter on world order provides a current analysis of international turbulence, encouraging you to connect theory to your own lived experience. Chapter 11 now includes a detailed discussion of climate change and how we can spotlight the environment in international relations through Green Theory approaches. Thoroughly refreshed and updated, further reading recommendations support you in finding diverse and current scholarship to enhance your learning. Book jacket.
