The Authentic Constitution Arthur E. Palumbo, 2009 In 2008 Alan Keyes a Republican presidential candidate in 1996 and 2000 described the relationship between the Declaration of Independence and the Constitution of the United States in the following way The doctrine of unalienable rights is to the Constitution what the laws of physics are to architecture or engineering Those laws are not repeated in every plan or architect s drawing but they are assumed and must be respected or the results will be defective and dangerous It is clear that the founding principles of the Declaration are intimately connected with the Constitution and it

Causality and Objectivity in Macroeconomics Tobias Henschen, 2023-09-29 Central banks and other policymaking institutions use causal hypotheses to justify macroeconomic policy decisions to the public and public institutions These hypotheses say that changes in one macroeconomic aggregate e g aggregate demand cause changes in other macroeconomic aggregates e g in inflation An important perhaps the most important goal of macroeconomists is to provide conclusive evidence in support of these hypotheses If they cannot provide any conclusive evidence then policymaking institutions will be unable to use causal hypotheses to justify policy decisions and then the scientific objectivity of macroeconomic policy analysis will be questionable The book analyzes the accounts of causality that have been or can be proposed to capture the type of causality that underlies macroeconomic policy analysis the empirical methods of causal inference that contemporary macroeconomists have at their disposal and the conceptions of scientific objectivity that traditionally play a role in economics The book argues that contemporary macroeconomists cannot provide any conclusive evidence in support of causal hypotheses and that macroeconomic policy analysis doesn t qualify as scientifically objective in any of the traditional meanings The book also considers a number of steps that might have to be taken in order for macroeconomic policy analysis to become more objective The book addresses philosophers of science and economics as well as macro economists econometricians and statisticians who are interested in causality and macro econometric methods of causal inference and their wider philosophical and social context

Beyond Energy: Inflationary Effects of Metals Price Shocks in Production Networks Jorge Miranda-Pinto,Mr. Andrea Pescatori,Martin Stuermer,Xueliang Wang,2024-10-22 We examine the role of metals as economic inputs by using a production network model calibrated for various countries using input output I O tables Empirically we employ local projections to study how metal shocks influence inflation testing country level heterogeneity in the sensitivity to these shocks Our findings indicate that metals price shocks have significant and persistent effects on core and headline inflation with particularly pronounced effects on countries that are highly exposed to metals in their production networks This is in contrasts to oil supply shocks which predominantly affect headline inflation A shift of the global economy towards a higher relative metals intensity due to the energy transition could lead to commodity price shocks increasingly influencing core rather than headline inflation This could make commodity price shocks less visible on impact but more persistent Central banks should consider this shift when assessing inflation dynamics and risks
