Macroeconomic Measurement Versus Macroeconomic Theory Merijn Knibbe,2019-12-06 Ideally scientific theory and scientific measurement should develop in tandem but in recent years this has not been the case in

economics There used to be a time when leading economists or their students established or led statistical offices and took care that the measurements were consistent with the theory and vice versa Not anymore Macroeconomic theorists and macroeconomic statisticians do not even speak the same language any longer They do use the same words such as consumption investments or unemployment but the meanings can often be different This book maps the differences between macroeconomic theory and measurement and explores them in some detail while also tracking their intellectual historical and in some cases ideological origins It also explores the possible policy implications In doing so the book draws on two separate strands of literature which are seldom used in unison macro statistical manuals and theoretical macro papers By doing so the book contributes to the effort to bridge the gap between them without compromising on the idea that a meaningful science of economics should in the end be based upon individual people and households and their social and cultural embedding instead of a representative consumer or Robinson Crusoe figure This work is essential reading for students economists statisticians and professionals
