masses larger than schools of killer whales the beetles engineered one of the world's greatest forest die offs since the deforestation of Europe by peasants between the eleventh and thirteenth centuries The beetle didn't act alone Misguided science out of control logging bad public policy and a hundred years of fire suppression created a volatile geography that released the world's oldest forest manager from all natural constraints Like most human empires the beetles exploded wildly and then crashed leaving in their wake grieving landowners humbled scientists hungry animals and altered watersheds Although climate change triggered this complex event human arrogance assuredly set the table With little warning an ancient insect pointedly exposed the frailty of seemingly stable manmade landscapes And despite the billions of public dollars spent on control efforts the beetles burn away like a fire that can't be put out Drawing on first hand accounts from entomologists botanists foresters and rural residents award winning journalist Andrew Nikiforuk investigates this unprecedented beetle plague its startling implications and the lessons it holds
