Body Dialectics in the Age of Goethe, 2016-08-09 In opposition to an essentialist conceptualization the social construct of the human body in literature can be analyzed and described by means of effective methodologies that are based on Discourse Theory Theory of Cultural Transmission and Ecology System Theory and Media Theory In this perspective the body is perceived as a complex arrangement of substantiation substitution and omission depending on demands expectations and prohibitions of the dominant discourse network The term Body Dialectics stands for the attempt to decipher and for a moment freeze the web of such discursive arrangements that constitute the fictitious notion of the body in the framework of a specific historic environment here in the Age of Goethe

Capitalism, Citizenship and the Arts of Thinking Kathryn Dean, 2014-03-26 Capitalism Citizenship and the Arts of Thinking proposes a historical materialist ethic of human flourishing understood in terms of the practice of citizenship It focuses on the ways in which capitalism s necessary mode of thinking analytical thinking impedes the nurturing of capabilities for citizenship as understood from a Marxian Aristotelian point of view It includes a systematic discussion of the Aristotelian resonances in Marx s critique of capitalism as well as an elaboration and critique of Alfred Sohn Rethel s account of the origins of analytical thinking in his book Intellectual and Manual Labor A Critique of Epistemology Dean s critique of this book draws on the language theories of Lev Vygotsky Alexander Luria Jack Goody Eric Havelock and Walter Ong so as to identify the origins of analytical thinking in literacy rather than in monetised exchange relations as claimed by Sohn Rethel Having traced the development of analytical thinking so as to bring out the ways in which this thinking was a condition of possibility for the division of head and hand in nineteenth century England Dean brings the analysis into the contemporary world by examining the changes effected by digitalised communication in terms citizenship capabilities now drawing on the work of Michael Hardt and Antonio Negri in order to do so The book s

ground breaking content is in the fusion of Marxian Aristotelian and linguistic elements to develop a critique of capitalism s hegemonic mode of thinking analytical thinking as manifested in the modern sciences and to show how the draining of intelligibility from the everyday world permitted by this thinking becomes an obstacle to the practice of meaningful citizenship Its main appeal will be to Marxist thinkers whose main concern is with the alienating as opposed to exploitative character of capitalist modes of life It is written to complement the work of such Marxists these being in the main writers such as Michael Hardt and Antonio Negri and is pitched at researchers in the field It could be used on post graduate courses in political theory as well as social and cultural theory *How Modern Science Came into the World* Floris

Cohen,2025-10-01 Once upon a time The Scientific Revolution of the 17th century was an innovative concept that inspired a stimulating narrative of how modern science came into the world Half a century later what we now know as the master narrative serves rather as a strait jacket so often events and contexts just fail to fit in No attempt has been made so far to replace the master narrative H Floris Cohen now comes up with precisely such a replacement Key to his path breaking analysis cum narrative is a vision of the Scientific Revolution as made up of six distinct yet narrowly interconnected revolutionary transformations each of some twenty five to thirty years duration This vision enables him to explain how modern science could come about in Europe rather than in Greece China or the Islamic world It also enables him to explain how half way into the 17th century a vast crisis of legitimacy could arise and in the end be overcome Building forth on his earlier *The Scientific Revolution A Historiographical Inquiry* 1994 his new book takes the latest researches duly into account while connecting these in highly innovative ways It is meant throughout as a constructive effort to break up all too deeply frozen patterns of thinking about the history of science **Translating Nature** Jaime Marroquin Arredondo,Jaime

Marroquín Arredondo,Ralph Bauer,2019-03-26 *Translating Nature* recasts the era of early modern science as an age not of discovery but of translation As Iberian and Protestant empires expanded across the Americas colonial travelers encountered translated and reinterpreted Amerindian traditions of knowledge knowledge that was later translated by the British reading from Spanish and Portuguese texts Translations of natural and ethnographic knowledge therefore took place across multiple boundaries linguistic cultural and geographical and produced through their transmissions the discoveries that characterize the early modern era In the process however the identities of many of the original bearers of knowledge were lost or hidden in translation The essays in *Translating Nature* explore the crucial role that the translation of philosophical and epistemological ideas played in European scientific exchanges with American Indians the ethnographic practices and methods that facilitated appropriation of Amerindian knowledge the ideas and practices used to record organize translate and conceptualize Amerindian naturalist knowledge and the persistent presence and influence of Amerindian and Iberian naturalist and medical knowledge in the development of early modern natural history Contributors highlight the global nature of the history of science the mobility of knowledge in the early modern era and the foundational roles that Native

Sha,2021-03-02 How did the idea of the imagination impact Romantic literature and science 2018 Winner Jean Pierre Barricelli Book Prize The International Conference on Romanticism Richard C Sha argues that scientific understandings of the imagination indelibly shaped literary Romanticism Challenging the idea that the imagination found a home only on the side of the literary as a mental vehicle for transcending the worldly materials of the sciences Sha shows how imagination helped to operationalize both scientific and literary discovery Essentially the imagination forced writers to consider the difference between what was possible and impossible while thinking about how that difference could be known Sha examines how the imagination functioned within physics and chemistry in Percy Bysshe Shelley s Prometheus Unbound neurology in Blake s Vala or The Four Zoas physiology in Coleridge s Biographia Literaria and obstetrics and embryology in Mary Shelley s Frankenstein He also demonstrates how the imagination was called upon to do aesthetic and scientific work using primary examples taken from the work of scientists and philosophers Davy Dalton Faraday Priestley Kant Mary Somerville Oersted Marcet Smellie Swedenborg Blumenbach Buffon Erasmus Darwin and Von Baer among others Sha concludes that both fields benefited from thinking about how imagination could cooperate with reason but that this partnership was impossible unless imagination s penchant for fantasy could be contained **Nominalism and Constructivism in Seventeenth-Century Mathematical**

Philosophy David Sepkoski,2013-05-24 What was the basis for the adoption of mathematics as the primary mode of discourse for describing natural events by a large segment of the philosophical community in the seventeenth century In answering this question this book demonstrates that a significant group of philosophers shared the belief that there is no necessary correspondence between external reality and objects of human understanding which they held to include the objects of mathematical and linguistic discourse The result is a scholarly reliable but accessible account of the role of mathematics in the works of amongst others Galileo Kepler Descartes Newton Leibniz and Berkeley This impressive volume will benefit scholars interested in the history of philosophy mathematical philosophy and the history of mathematics
