Big Data, Little Data, No Data
Christine L. Borgman, 2017-02-03 An examination of the uses of data within a changing knowledge infrastructure offering analysis and case studies from the sciences social sciences and humanities Big Data is on the covers of Science Nature the Economist and Wired magazines on the front pages of the Wall Street Journal and the New York Times But despite the media hyperbole as Christine Borgman points out in this examination of data and scholarly research having the right data is usually better than having more data little data can be just as valuable as big data In many cases there are no data because relevant data don't exist cannot be found or are not available Moreover data sharing is difficult incentives to do so are minimal and data practices vary widely across disciplines Borgman an often cited authority on scholarly communication argues that data have no value or meaning in isolation they exist within a knowledge infrastructure an ecology of people practices technologies institutions material objects and relationships After laying out the premises of her investigation six provocations meant to inspire discussion about the uses of data in scholarship Borgman offers case studies of data practices in the sciences the social sciences and the humanities and then considers the implications of her findings for scholarly practice and research policy To manage and exploit data over the long term Borgman argues requires massive investment in knowledge infrastructures at stake is the future of scholarship
