---

Macroeconomics is the social science and the controlled experiment is impossible. Besides, economic phenomena are very complex. That's why economists use models.

**Economic model** is a stylized representation of the economy, a generalization and abstraction of reality that seeks to isolate a few of the most important determinants (causes) of an economic event in order to provide a better understanding of that event.

Economic models are constructed and used

- to **simplify** the analysis of complex economic reality;
- to **examine** the relationship between economic phenomena and the regularity of their development;
- to **understand** what goes on in the economy and how the economy works;
- to **develop policies** that might prevent, correct, or alleviate economic problems and improve the situation in the economy;
- to **forecast** future development of economic process.
