na Andreas Reichenbach,Andreas Bringmann,2011-02-18 M ller cells make up just 0 005% of the cells in our central nervous system They do not belong to the more esteemed family of neuronal cells but to the glia a family of cells that until recently were seen as mere filling material between the neurons Now however all that has changed Sharing the insights of more than a quarter century of research into M ller cells Drs Andreas Reichenbach and Andreas Bringmann of Leipzig University make a compelling case for the central role M ller cells play Everyone agrees that the eye is a very special and versatile sense organ yet it has turned out in recent years that M ller cells

are peculiar and multipotent glial cells In the retina of most vertebrates and even of many mammals Müller cells are the only type of macro glial cells thus they are responsible for a wealth of neuron supportive functions that in the brain rely upon a division of labour among astrocytes oligodendrocytes and ependymal cells Even beyond such a role in the central nervous system as model glia Müller cells are adapted to several exciting roles in support of vision They deliver the light stimuli to the photoreceptor cells in the inverted vertebrate retina aid the processing of visual information and are responsible for the homeostatic maintenance of the retinal extracellular milieu In Müller Cells in the Healthy and Diseased Retina aimed not just at neurobiologists but at anyone concerned with retinal degeneration every angle of Müller cells is covered from an introduction to their basic properties through their roles as light cables and shock absorbers to the part they play in diseases and disorders of the eye Once these have all been covered in detail the authors move on to discuss the future direction of research into these small but potent cellular phenomena About the Authors Dr Andreas Reichenbach was born in 1950 in Leipzig Germany He studied medicine and specialized as a physiologist working on the mammalian retina Since 1984 he has focused his efforts and those of a growing number of fellows in his team on Müller cell research He has held a professorship at Leipzig University since 1994 After studying biology Dr Andreas Bringmann 1960 worked in the field of systemic neurophysiology until he was inspired in 1996 by Andreas Reichenbach to research the most interesting cell the Müller cell He is now in the Department of Ophthalmology of the University of Leipzig where he is the head of the Basic Research Laboratory

The Fovea Andreas Bringmann, Peter Wiedemann, 2021-08-28 The Fovea Structure Function Development and Disease summarizes the current biological knowledge regarding the two types of the vertebrate fovea and its main structural elements the Müller cells This information is then used to explain different aspects of human vision foveal development and macular disorders Sections give an overview of the retinal structure and the different types of retinal glia survey the structure and function of the primate and non mammalian fovea types discuss foveal development with a focus on the human fovea cover the roles of Müller cells and astrocytes in the pathogenesis and regeneration of various human macular disorders are described Using a translational approach this reference is a valuable text for scientists clinicians and physicians interested in the fovea Readers will gain a new understanding of the cellular basics of the fovea which is the most important part of the eye Adopts a translational approach summarizing the biological knowledge regarding the structure and function of the fovea the roles of Müller cells in mediating the structural integrity and function of the fovea Provides overviews of both basic types of the vertebrate fovea countering the popular belief that there is only one type of the vertebrate fovea the human fovea Thoroughly shows the mechanisms involved in the development of the fovea that explain the rapid improvement of visual acuity in newborns Explains pathological changes in the foveal structure and function with evaluation pointing toward possible prevention and or cure

The Primate Visual System Jan Kremers, 2005-12-13 Many recent developments in the field in recording staining genetic and stimulation techniques in vivo and in vitro have

significantly increased the amount of available data on the primate visual system Written with contributions from key neurobiologists in the field The Primate Visual System will provide the reader with the latest developments examining the structure function and evolution of the primate visual system The book takes a comparative approach as a basis for studying the physiological properties of primate vision and examines the phylogenetic relationship between the visual systems of different primate species Taken from a neurobiologist's perspective this book provides a unique approach to the study of primate vision as a basis for further study into the human visual system Altogether an important overview of the structure function and evolution of the primate visual system from a neurobiologist's perspective written specifically for higher level undergraduate and graduate students taking courses in neuroscience physiology optics visual science as well as a valuable read to researchers new to the field

Vitreous J. Sebag, 2014-10-01 The vitreous body long has been the most mysterious of all ocular structures owing perhaps to its seeming simplicity There have been few concerted sustained efforts to unravel the mysteries of how vitreous is composed and what role it plays in normal physiology as well as pathology Over the years however many studies have produced important findings concerning vitreous biochemistry structure physiology and pathobiology Published on the 25th anniversary of Sebag's first book on Vitreous this second installment is nearly five times longer than its predecessor reflecting how much has been learned in the past quarter century This well constructed compendium not only addresses the most current scientific knowledge but also reviews clinical perspectives in a manner that lends richness to the scope of the book Written by 90 authors this book has 56 chapters organized into 7 sections Biochemistry Anatomy Development and Aging Pathology Pathobiology Physiology and Pharmacotherapy Posterior Vitreo Retinal Surgery Peripheral Vitreo Retinal Surgery and Pharmacologic Vitreolysis With a foreword by Coleman Lincoff and an introduction by Wallace Foulds Sebag's latest tome on vitreous is destined to be the authoritative text for years to come
