Mad Cows:

Mad Cows and Mother's Milk, Second Edition William Leiss, Douglas Alan Powell, 2004 The first case study deals with the mad cow fiasco of 1996 one of the most expensive and tragic examples of poor risk management in the last twenty five years For ten years the British government failed to acknowledge the possibility of a link between mad cow disease and Creutzfeldt Jakob disease the human equivalent until increased scientific evidence and public pressure forced them to take action resulting in the slaughter of more than one million cattle The second study looks at what is commonly known as hamburger disease caused by a virulent form of the E coli bacterium which has struck thousands and killed over thirty people in the last few years Despite its widespread effects it is unclear whether scientific knowledge on preventing the disease is reaching the public Other case studies include the use of a genetically engineered hormone to increase milk production in cows health risks associated with silicone breast implants public controversies surrounding dioxins and PCBs and the introduction of agricultural biotechnology These case studies show that institutions routinely fail to communicate the scientific basis of various high profile risks These failures to inform the public make it difficult for governments industry and society to manage risk controversies sensibly and often result in massive costs With its detailed analyses of specific risk management controversies **Mad Cows and Mother's Milk** will help us avoid future mistakes Mad Cow U.S.A. Sheldon Rampton, John Clyde Stauber, 1997 **Mad Cow U S A** shatters the false belief that the government and food industry would never let it happen here Even as tens of thousands of cows died in Britain the government denied the risk to human beings Knowing the similar risk in the U S government and industry have managed a successful public relations offensive to keep Americans in the dark Rampton and Stauber expose for the first time the deadly game of dementia roulette being played with our food supply **How the Cows Turned Mad** Maxime Schwartz, 2003-03-15 A gripping biological detective story that traces the history of mad cow disease and related infectious brain disease of livestock and people The book also illustrates dramatically how scientific progress unfolds as researchers in various countries pursue new ideas and leads in order to identify the cause of and relationship between these enigmatic diseases Mad Cow Disease Carmen Ferreiro, 2009 Explains mad cow disease what it is how it is passed from cows to humans and possible treatment options **Mad Cow Crisis** Scott Ratzan, 2005-08-05 The announcement that BSE might cause a fatal human disease Creutzfeldt Jacob disease CJD triggered enormous media attention public alarm and government wrangling that threatened the future of European integration As Scott Ratzan argues It is my belief that the BSE crisis represents a quintessential case that will go down in history as the Exxon Valdez Union Carbide's Bhopal accident and other such cases of interdisciplinary study This book offers lessons learned from the crisis with contributions from experts with different viewpoints veterinarians Eurocrats public relations experts politicians policy makers journalists and representatives of the beef industry It also offers a compilation of the key reports from governmental bodies as a case study in policy making scientific health discovery and dissemination of

Emotional Terrors in the Workplace: Protecting Your Business' Bottom Line Vali Hawkins Mitchell, 2004-11 Annotation Reasonable variations of human emotions are expected at the workplace People have feelings Emotions that accumulate collect force expand in volume and begin to spin are another matter entirely Spinning emotions

can become as unmanageable as a tornado and in the workplace they can cause just as much damage in terms of human distress and economic disruption All people have emotions Normal people and abnormal people have emotions Emotions happen at home and at work So understanding how individuals or groups respond emotionally in a business situation is important in order to have a complete perspective of human beings in a business function Different people have different sets of emotions Some people let emotions roll off their back like water off a duck Other people swallow emotions and hold them in until they become toxic waste that needs a disposal site Some have small simple feelings and others have large complicated emotions Stresses of life tickle our emotions or act as fuses in a time bomb Stress triggers emotion Extreme stress complicates the wide range of varying emotional responses Work is a stressor Sometimes work is an extreme stressor Since everyone has emotion it is important to know what kinds of emotion are regular and what kinds are irregular abnormal or damaging within the business environment To build a strong well grounded value added set of references for professional discussions and planning for Emotional Continuity Management a manager needs to know at least the basics about human emotion Advanced knowledge is preferable Emotional Continuity Management planning for emotions that come from the stress caused by changes inside business from small adjustments to catastrophic upheavals requires knowing emotional and humanity based needs and functions of people and not just technology and performance data Emergency and Disaster Continuity planners sometimes posit the questions What if during a disaster your computer is working but no one shows up to use it What if no one is working the computer because they are terrified to show up to a worksite devastated by an earthquake or bombing and they stay home to care for their children The Emotional Continuity Manager asks What if no one is coming or no one is producing even if they are at the site because they are grieving or anticipating the next wave of danger What happens if employees are engaged in emotional combat with another employee through gossip innuendo or out and out verbal warfare And what if the entire company is in turmoil because we have an Emotional Terrorist who is just driving everyone bonkers The answer is that in terms of bottom line thinking productivity is productivity and if your employees are not available because their emotions are not calibrated to your industry standards then fiscal risks must be considered Human compassion needs are important And so is money Employees today face the possibility of biological nuclear incendiary chemical explosive or electronic catastrophe while potentially working in the same cubicle with someone ready to suicide over personal issues at home They face rumors of downsizing and outsourcing while watching for anthrax amidst rumors that co workers are having affairs An employee coughs someone jokes nervously about SARS or teases a co worker about their hamburger coming from a Mad Cow someone laughs someone worries and productivity can falter as minds are not on tasks Emotions run rampant in human lives and therefore at work sites High demand emotions demonstrated by complicated workplace relationships time consuming divorce proceedings addiction behaviors violence illness and death are common issues at work sites which people either manage well or do not manage well Low demand emotions demonstrated by
