Mathematical Models As A Tool For Social Sciences:

Mathematical Models as a Tool for Social Sciences Bruce J. West, 1980 **Qualitative Mathematics for the Social Sciences** Lee Rudolph, 2013 This book combines psychological and mathematical perspectives to analyse how qualitative mathematics can be used to create models of social and psychological processes *Mathematical Structures and Mathematical Modelling* Isaak Moiseevich Āglom, 1986 A substantial amount of this book is devoted to general questions including significant material from the history of science allowing one to follow the formation of modern attitudes on the essence of mathematics and the methods of its applications only chapters 5 and 6 are devoted to a survey of the basic algebraic structures and a more detailed analysis of a structure associated with some geometric considerations are of a more concrete character **Mathematical Modelling** Murray S. Klamkin, 1987-01-01 Mathematics of Computing Miscellaneous

Social Science Methodology John Gerring, 2001-09-10 This book offers a one volume introduction to social science methodology relevant to the disciplines of anthropology economics history political science psychology and sociology It is written for beginning students long time practitioners and methodologists and applies to work conducted in qualitative and quantitative styles It synthesizes the vast and diverse field of methodology in a way that is clear concise and comprehensive While offering a handy overview of the subject the book is also an argument about how we should conceptualize methodological problems Tasks and criteria the author argues not fixed rules of procedure best describe the search for methodological adequacy Thinking about methodology through this lens provides a new framework for understanding work in the social sciences [Mathematical Models for Neglected Tropical Diseases: Essential Tools for Control and Elimination, Part A](#), 2015-03-10 First published in 1963 *Advances in Parasitology* contains comprehensive and up to date reviews in all areas of interest in contemporary parasitology *Advances in Parasitology* includes medical studies of parasites of major influence such as *Plasmodium falciparum* and trypanosomes The series also contains reviews of more traditional areas such as zoology taxonomy and life history which shape current thinking and applications The 2013 impact factor is 4.36 *Informs* and updates on all the latest developments in the field Contributions from leading authorities and industry experts

Mathematical Models for Society and Biology Edward Beltrami, 2002 *Mathematical Modeling for Society and Biology* engagingly relates mathematics to compelling real life problems in biology and contemporary society It shows how mathematical tools can be used to gain insight into these modern common problems to provide effective real solutions Beltrami's creative non threatening approach draws on a wealth of interesting examples pertaining to current social and biological issues Central ideas appear again in different contexts throughout the book showing the general unity of the modeling process The models are strikingly novel and based on issues of real concern Most have never appeared in book form Through the relevance of these models mathematics becomes not just figures and numbers but a means to a more refined understanding of the world **Qualitative Theory of Dynamical Systems, Tools and Applications for**

Economic Modelling Gian Italo Bischi, Anastasiia Panchuk, Davide Radi, 2016-06-02 The book presents the lectures delivered during a short course held at Urbino University in summer 2015 on qualitative theory of dynamical systems included in the activities of the COST Action IS1104 The EU in the new economic complex geography models tools and policy evaluation It provides a basic introduction to dynamical systems and optimal control both in continuous and discrete time as well as some numerical methods and applications in economic modelling Economic and social systems are intrinsically dynamic characterized by interdependence nonlinearity and complexity and these features can only be approached using a qualitative analysis based on the study of invariant sets equilibrium points limit cycles and more complex attractors together with the boundaries of their basins of attraction which requires a trade off between analytical geometrical and numerical methods Even though the early steps of the qualitative theory of dynamical systems have been in continuous time models in economic and social modelling discrete time is often used to describe event driven often decision driven evolving systems The book is written for Ph D and master s students post doctoral fellows and researchers in economics or sociology and it only assumes a basic knowledge of calculus However it also suggests some more advanced topics **Mathematical Models for Neglected Tropical Diseases: Essential Tools for Control and Elimination, Part B**, 2016-10-16 Mathematic Modelling Improving the Implementation Monitoring and Evaluation of Interventions Part B the latest volume in the Advances in Parasitology series contains comprehensive and up to date reviews in the field of mathematic modeling and its implementation within parasitology The series includes medical studies of parasites of major influence such as Plasmodium falciparum and trypanosomes along with reviews of more traditional areas such as zoology taxonomy and life history all of which shape current thinking and applications Informs and updates on all the latest developments in mathematic modeling Contains contributions from leading authorities and industry experts Latest installment in the Advances in Parasitology series The Social Science Encyclopedia Adam Kuper, Jessica Kuper, 2004-10-14 The Social Science Encyclopedia first published in 1985 to acclaim from social scientists librarians and students was thoroughly revised in 1996 when reviewers began to describe it as a classic This third edition has been radically recast Over half the entries are new or have been entirely rewritten and most of the balance have been substantially revised Written by an international team of contributors the Encyclopedia offers a global perspective on key issues within the social sciences Some 500 entries cover a variety of enduring and newly vital areas of study and research methods Experts review theoretical debates from neo evolutionism and rational choice theory to poststructuralism and address the great questions that cut across the social sciences What is the influence of genes on behaviour What is the nature of consciousness and cognition What are the causes of poverty and wealth What are the roots of conflict wars revolutions and genocidal violence This authoritative reference work is aimed at anyone with a serious interest in contemporary academic thinking about the individual in society **Tools and Techniques for Social Science Simulation** Ramzi Suleiman, Klaus G. Troitzsch, Nigel Gilbert, 2012-12-06 The use of computer simulations to study social

phenomena has grown rapidly during the last few years. Many social scientists from the fields of economics, sociology, psychology and other disciplines now use computer simulations to study a wide range of social phenomena. The availability of powerful personal computers, the development of multidisciplinary approaches and the use of artificial intelligence models have all contributed to this development. The benefits of using computer simulations in the social sciences are obvious. This holds true for the use of simulations as tools for theory building and for its implementation as a tool for sensitivity analysis and parameter optimization in application oriented models. In both simulation provides powerful tools for the study of complex social systems especially for dynamic and multi agent social systems in which mathematical tractability is often impossible. The graphical display of simulation output renders it user friendly to many social scientists that lack sufficient familiarity with the language of mathematics. The present volume aims to contribute in four directions: 1) To examine theoretical and methodological issues related to the application of simulations in the social sciences. By this we wish to promote the objective of designing a unified user friendly simulation toolkit which could be applied to diverse social problems. While no claim is made that this objective has been met, the theoretical issues treated in Part 1 of this volume are a contribution towards this objective.

Proceeding of the International Science and Technology Conference "FarEastCon 2021" Denis B. Solovov, Viktor V. Savalev, Alexander T. Bekker, Valery I. Petukhov, 2022-02-26. Mathematical Models in the Social Sciences John G. Kemeny, James Laurie Snell, 1962. Doing Quantitative Research in the Social Sciences Thomas R. Black, 1999-03-30. This original textbook provides a comprehensive and integrated approach to using quantitative methods in the social sciences. Thomas R. Black guides the student and researcher through the minefield of potential problems that may be confronted and it is this emphasis on the practical that distinguishes his book from others which focus exclusively on either research design and measurement or statistical methods. Focusing on the design and execution of research, key topics such as planning, sampling, the design of measuring instruments, choice of statistical test and interpretation of results are examined within the context of the research process. In a lively and accessible style, the student is introduced to research design issues alongside statistical procedures and encouraged to develop analytical and decision making skills.

Limits Of Mathematical Modeling In The Social Sciences, The: The Significance Of Godel's Incompleteness Phenomenon Francisco Antonio Doria, 2017-05-30. Current mathematical models are notoriously unreliable in describing the time evolution of unexpected social phenomena from financial crashes to revolution. Can such events be forecast? Can we

compute probabilities about them Can we model them This book investigates and attempts to answer these questions through Gödel's two incompleteness theorems and in doing so demonstrates how influential Gödel is in modern logical and mathematical thinking Many mathematical models are applied to economics and social theory while Gödel's theorems are able to predict their limitations for more accurate analysis and understanding of national and international events This unique discussion is written for graduate level mathematicians applying their research to the social sciences including economics social studies and philosophy and also for formal logicians and philosophers of science Scientific Discovery in the Social Sciences Mark Addis, Peter C. R. Lane, Peter D. Sozou, Fernand Gobet, 2019-09-12 This volume offers selected papers exploring issues arising from scientific discovery in the social sciences It features a range of disciplines including behavioural sciences computer science finance and statistics with an emphasis on philosophy The first of the three parts examines methods of social scientific discovery Chapters investigate the nature of causal analysis philosophical issues around scale development in behavioural science research imagination in social scientific practice and relationships between paradigms of inquiry and scientific fraud The next part considers the practice of social science discovery Chapters discuss the lack of genuine scientific discovery in finance where hypotheses concern the cheapness of securities the logic of scientific discovery in macroeconomics and the nature of that what discovery with the Solidarity movement as a case study The final part covers formalising theories in social science Chapters analyse the abstract model theory of institutions as a way of representing the structure of scientific theories the semi automatic generation of cognitive science theories and computational process models in the social sciences The volume offers a unique perspective on scientific discovery in the social sciences It will engage scholars and students with a multidisciplinary interest in the philosophy of science and social science The Political Economy of Development Norman Thomas Uphoff, Warren Frederick Ilchman, 1972 The new political economy Development in the perspective of political economy Problems and policies of development Measures and models for development The political economy of education and employment The political economy of economic policy

Modelling and Simulation in the Social Sciences from the Philosophy of Science Point of View R. Hegselmann, Ulrich Mueller, Klaus G. Troitzsch, 2013-03-09

Model building in the social sciences can increasingly rely on well elaborated formal theories At the same time inexpensive large computational capacities are now available Both make computer based model building and simulation possible in social science whose central aim is in particular an understanding of social dynamics Such social dynamics refer to public opinion formation partner choice strategy decisions in social dilemma situations and much more In the context of such modelling approaches novel problems in philosophy of science arise which must be analysed the main aim of this book Interest in social simulation has recently been growing rapidly world wide mainly as a result of the increasing availability of powerful personal computers The field has also been greatly influenced by developments in cellular automata theory from mathematics and in distributed artificial intelligence which provided tools readily applicable to social simulation This book presents a number of modelling and simulation approaches and their relations to problems in philosophy of science It addresses sociologists and other social scientists interested in formal modelling mathematical sociology and computer simulation as well as computer scientists interested in social science applications and philosophers of social science

Social Science Literature Wesley L. Gould, Michael Barkun, 2015-03-08 This bibliography is a companion volume to International Law and the Social Sciences One of the aims of the earlier work by Wesley L Gould and Michael Barkun was to show how social science concepts could be employed in research in international law With the support and encouragement of the American Society of international Law they have now compiled a broad and thorough survey of social science literature of potential usefulness to students and practitioners of international law Arranged by topics the works cited range over political science economics sociology anthropology geography and many interdisciplinary fields Material on possible methodological approaches is also included Each citation is fully and critically annotated and cross indexed Originally published in 1972 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
