Mechanical Connections In Wood Structures:

Mechanical Connections in Wood Structures American Society of Civil Engineers. Task Committee on Fasteners, 1996
This manual presents current design practices and research information on mechanical fasteners used in wood connections in the United States and abroad Chapters review a vast array of connections including nails spikes and staples lag screws and wood screws bolts drift bolts and pins metal connector plates and timber connectors Issues addressed range from materials and basic design criteria to fabrication practices installation practices connection details and the research basis for design practice *Mechanical Connections in Wood Structures* Task Committee on Fasteners of the Committee on Wood, ASCE Manuals and report on engineering practice ; 84, 1995 *Kinetics of Mechanical Connections in Wood Structures* Daniel Ramírez Opiso, 2013 As a part of the process of renovation of Eurocode 5 a study on the variables affecting the load bearing capacity and the kinetics of mechanical connections is conducted together with an investigation on the influence of the fiber direction in the embedment strength of wood Experiments and numerical models are made and a complementary identification of the failure mode is realized The large amount of variables and cross correlations affecting the load bearing capacity of the connections as well as the complex effect of the grain direction on the embedment strength of wood makes indispensable the further study in both subjects This report provides useful information to help defining future needed experiments **Current and Future Applications of Mechanical Fasteners for Light-frame Wood Structures**, 1993 Springer Handbook of Wood Science and Technology Peter Niemz, Alfred Teischinger, Dick Sandberg, 2023-04-01 This handbook provides an overview on wood science and technology of unparalleled comprehensiveness and international validity It describes the fundamental wood biology chemistry and physics as well as structure property relations of wood and wood based materials The different aspects and steps of wood processing are presented in detail from both a fundamental technological perspective and their realisation in industrial contexts The discussed industrial processes extend beyond sawmilling and the manufacturing of adhesively bonded wood products to the processing of the various wood based materials including pulp and paper natural fibre materials and aspects of bio refinery Core concepts of wood applications quality and life cycle assessment of this important natural resource are presented The book concludes with a useful compilation of fundamental material parameters and data as well as a glossary of terms in accordance with the most important industry standards Written and edited by a truly international team of experts from academia research institutes and industry thoroughly reviewed by external colleagues this handbook is well attuned to educational demands as well as providing a summary of state of the art research trends and industrial requirements It is an invaluable resource for all professionals in research and development and engineers in practise in the field of wood science and technology **Engineered Bamboo Structures** Yan Xiao, 2022-04-28 Bamboo is in the spotlight as a potential building material in the current pursuit of a CO2 neutral society due to its rapid maturation and excellent mechanical properties

Despite the growing interest in bamboo in academia and society there is a lack of systematic understanding of the fabrication design and construction processes using bamboo as a modern industrial material This is the first book to describe a new category of structural systems constructed with engineered bamboo It gives a definition of engineered bamboo glulam in an analogy with steel structures and wood structures Structural systems and components have been designed using glulam then industrialized production processes of glulam are described Based on state of the art research design guidelines are suggested in a comparable and parallel approach to the existing guidelines for composite wood structures The book also discusses bamboo structures in the context of sustainable development including the benefits of using bamboo as an alternative or replacement for wood especially for developing countries many of which are faced with the lack or destruction of forest resources

Design of Integrally-Attached Timber Plate Structures Yves Weinand, 2021-09-26 Design of Integrally Attached Timber Plate Structures outlines a new design methodology for digitally fabricated spatial timber plate structures presented with examples from recent construction projects It proposes an innovative and sustainable design methodology algorithmic geometry processing structural optimization and digital fabrication technology transfer and construction are formulated and widely discussed The methodology relies on integral mechanical attachment whereby the connection between timber plates is established solely through geometric manipulation without additional connectors such as nails screws dowels adhesives or welding The transdisciplinary design framework for spatial timber plate structures

brings together digital architecture computer science and structural engineering covering parametric modeling and architectural computational design geometry exploration the digital fabrication assembly of engineered timber panels numerical simulations mechanical characterization design optimization and performance improvement The method is demonstrated through different prototypes physical models and three build examples focusing specifically on the design of the timber plate roof structure of 23 large span arches called the Annen Headquarters in Luxembourg This is useful for the architecture engineering and construction AEC sector and shows how new structural optimization processes can be reinvented through geometrical adaptations to control global and local geometries of complex structures This text is ideal for structural engineering professionals and architects in both industry and academia and construction companies
