Rheumatic Fever And Streptococcal Infection Unraveling The Mysteries Of A Dread Disease:

Rheumatic Fever and Streptococcal Infection Benedict F. Massell, 1997 This is a historical review of the development of our knowledge of the clinical picture etiology pathogenesis and prevention of rheumatic fever and rheumatic heart disease over the past four centuries Benedict Massell examines the major contributions of both clinicians and investigators to our current understanding of rheumatic fever as a separate disease form Elucidating many facts about this dread disease Massell examines the frequent epidemics in training camps during World War II discusses our growing understanding of the pathogenesis and mechanisms by which streptococcal infections cause the disease and shows the important progress made in prevention through the use of penicillin and other antibiotics He includes a discussion of the many problems which can hinder our understanding and control of this disease as well as recent promising developments in the clarification of the molecular structure of the streptococcal protein and the possible application of this information to the development of a safe and effective vaccine for the prevention of streptococcal infection [Everything You Need to Know About Rheumatic Fever](#)

Phillip Margulies, 2003-12-15 Presents an overview of rheumatic fever that includes the history of the disease new developments in combating it and new ways to prevent its spread [Hot Topics in Infection and Immunity in Children IV](#)

Adam Finn, Andrew J. Pollard, 2007-12-06 Hot Topics in Infection and Immunity in Children IV contains chapters based on lectures given by speakers at the Infection and Immunity in Children course held in June 2006 at Keble College Oxford It was the fourth annual course of this name and this is the fourth book in the series as well Together the courses and books have become important components of the training available to paediatricians with an interest in this specialty and have become increasingly popular each year This book covers topics in infectious diseases in children and is intended for Pediatric Infectious Disease trainees trainers and all those who manage children with infections Paediatric Infectious Diseases is now a recognised specialty in Europe with established training programmes and training centres overseen by the European Society for Paediatric Infectious Diseases This book and the course that precedes each edition will continue to play useful parts in the development and knowledge of specialists throughout the continent and beyond [The Deadly Truth](#)

Gerald N. Grob, 2009-07 The Deadly Truth chronicles the complex interactions between disease and the peoples of America from the pre Columbian world to the present Grob's ultimate lesson is stark but valuable there can be no final victory over disease The world in which we live undergoes constant change which in turn creates novel risks to human health and life We conquer particular diseases but others always arise in their stead In a powerful challenge to our tendency to see disease as unnatural and its virtual elimination as a real possibility Grob asserts the undeniable biological persistence of disease Diseases ranging from malaria to cancer have shaped the social landscape sometimes through brief furious outbreaks and at other times through gradual occurrence control and recurrence Grob integrates statistical data with particular peoples and places while giving us the larger patterns of the ebb and flow of disease over centuries Throughout we see how much of our history

culture and nation building was determined in ways we often don't realize by the environment and the diseases it fostered. The way in which we live has shaped and will continue to shape the diseases from which we get sick and die. By accepting the presence of disease and understanding the way in which it has physically interacted with people and places in past eras, Grob illuminates the extraordinarily complex forces that shape our morbidity and mortality patterns and provides a realistic appreciation of the individual, social, environmental, and biological determinants of human health.
