Woods, 1985 Proceedings of a session at the ASCE National Convention held in Detroit Michigan October 23 1985 Sponsored by the Geotechnical Engineering Division of ASCE This collection contains four papers presented to recognize the accomplishments of Professor F E Richart The geotechnical specialty known as soil dynamics has evolved during the past 25 years from a minor role to a mainstream discipline Professor Richart played a major role in the development of this specialty He has progressively led the way to conquering the basic elements required to build a sound and rational approach to problems of soil and foundation dynamics Topics include the strength of soils in terms of effective stress recent developments in resonant column testing limits on dynamic measurements and instrumentation and shallow seismic exploration in soil dynamics *Richart Commemorative Lectures* R. D. Woods, 1985 *Foundation Engineering Handbook* Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction *Advanced Laboratory Stress-Strain Testing of Geomaterials* R. Kuwano, 2018-04-24 A discussion of developments in the measurement and interpretation of advanced laboratory stress strain testing of geomaterials It includes a collection of case studies which apply the test results and is based on the activities of the technical committee No 29 of the ISSMGE **Dynamic Geotechnical Testing II** Ronald J.
