Rennie, 2025-11-21 This book offers new methodological approaches that contextualize the lives of German First World War aviators through the iconography that created their image the act of killing and rituals of death in aerial combat and the collapsing perceptions of

space and time created by the world's first aerial conflict. Readers will encounter pilots and observers who endured the violent experience of flying aircraft made of wood and canvas while struggling for survival in an environment that could just as easily kill and maim through mechanical or structural failure as well as through combat. Embedded in this history are aviators who forged a new kind of warfare, overcame remarkable physical and psychological injuries, and cemented the public idea of the fighter pilot. In doing so, they established aviation as a site of memory, mourning, and meaning-making, which in the aftermath of defeat became a significant pillar in the rhetoric used to fuel the rise of Fascism and Nazism. This volume will appeal to advanced undergraduate and graduate students of the First World War and modern Germany, as well as to general readers interested in First World War aviation.

[Tiger Check](#) Steven A. Fino, 2017-11-01

How did American fighter pilots respond to the challenges posed by increasing automation? Spurred by their commanders during the Korean War to be tigers—aggressive and tenacious—American fighter pilots charged headlong into packs of fireball-spewing enemy MiGs, relying on their keen eyesight, piloting finesse, and steady trigger fingers to achieve victory. But by the 1980s, American fighter pilots vanquished their foes by focusing on a four-inch square cockpit display manipulating electromagnetic waves and launching rocket-propelled guided missiles from miles away. In this new era of automated long-range air combat, can fighter pilots still be considered tigers? Aimed at scholars of technology and airpower aficionados alike, Steven A. Fino's *Tiger Check* offers a detailed study of air-to-air combat, focusing on three of the US Air Force's most famed aircraft: the F-86E Sabre, the F-4C Phantom II, and the F-15A Eagle. Fino argues that increasing fire control automation altered what fighter pilots actually did during air-to-air combat. Drawing on an array of sources, as well as his own decade of experience as an F-15C fighter pilot, Fino unpacks not just the technological black box of fighter fire control equipment but also fighter pilots' attitudes toward their profession and their evolving aircraft. He describes how pilots grappled with the new technologies, acutely aware that the very systems that promised to simplify their jobs while increasing their lethality in the air also threatened to rob them of the quintessential, albeit mythic, fighter pilot experience. Finally, Fino explains that these new systems often required new, unique skills that took time for the pilots to identify and then develop. Eschewing the typical "great machine" or "great pilot" perspectives that dominate aviation historiography, *Tiger Check* provides a richer perspective on humans and machines working and evolving together in the air. The book illuminates the complex

interactions between human and machine that accompany advancing automation in the workplace
