Rickover And The Nuclear Navy The Discipline Of Technology:

Rickover and the Nuclear Navy Francis Duncan, 1990 No book will ever come closer than this to providing an inside overview of Admiral Hyman G Rickover's nuclear propulsion program. The author, an Atomic Energy Commission AEC historian assigned to the admiral's office, spent years observing the project and its controversial leader in action, and the insights he provides here reflect both his familiarity with the subject and his ability to remain an objective observer. From 1974 to the day Rickover retired in 1982, Francis Duncan had free access to files, documents, and personnel at every level of involvement, a rare, never to be repeated opportunity that most historians dream of but few get. And as this book clearly shows, he took full advantage of the situation to gain a unique understanding of exactly how the program operated. The result is a thorough, balanced record of what may well be the U.S. Navy's and the nation's most important and far-reaching project of the twentieth century. Knowing that facts and figures alone don't tell the entire story, Duncan talked to scores of people who dealt with day-to-day operations, watched men in prototype training, and then accompanied them to sea, visited civilian and naval installations, and had close contact with Rickover himself. He also interviewed former U.S. presidents, secretaries of the navy, chiefs of naval operations, AEC chairmen, and legislative leaders who kept tabs on the projects but were removed from daily activities. Never once, the author says, did the admiral attempt to interfere with his research, nor did Rickover read the manuscript. While the focus here is on the nuclear program, not the man, this book does provide fascinating insights into Rickover's personality and his efforts to maintain standards of excellence that would assure the program's safety and its ultimate success. Using one of the admiral's favorite terms, the discipline of technology, to demonstrate the method of technological application advocated by Rickover, Duncan effectively balances technical detail with astute analysis and even drama. Filled with information not found elsewhere, his study is a valuable chronicle of the development of submarine propulsion reactors, the loss of the Thresher, the struggle over the application of nuclear propulsion to surface fleet, and the use of the Shippingport Atomic Power Plant to illustrate the feasibility of a light water breeder reactor.

Rickover: The Struggle for Excellence Francis Duncan, 2021-06-17 Admiral Hyman G Rickover 1900-1986, the Father of the Nuclear Navy, was born Chaim Godalia Rickover in eastern Poland to Jewish parents fleeing Russian antisemitic pogroms in 1906. With his mother and sister, he joined his father, who had traveled to America since 1897, in New York City. The family soon moved to Chicago, where Rickover's father worked as a tailor. Congressman Adolph Sabath, a Czech Jewish immigrant, nominated Rickover for appointment to the US Naval Academy. Rickover passed the entrance exams and entered the Academy in 1918. After sea duty on several ships and submarines, he served as head of the Electrical Section in the Bureau of Ships and in 1946 was sent to Oak Ridge to start working on nuclear naval propulsion reactors, a program he would lead for the rest of his career. He became a four-star admiral in 1973. Rickover's work on nuclear propulsion had a profound effect on the post-World War II world and on the development of civilian nuclear reactors for electricity generation. His demand for excellence and

accountability was felt far beyond the naval community yet few other flag officers in the US Navy have been so controversial. Drawing on the admiral's private papers and the personal insights of friends and family members, this biography examines Rickover's extraordinary naval career and his private life. Francis Duncan, in his long-awaited full biography of Hyman Rickover, achieves that difficult dual goal of close personal insight and honesty of distance. Duncan details Rickover's many controversies, his towering rages, and his contempt for tradition, bureaucracy, and stupidity, a very readable cruise through the life of a notorious curmudgeon who, after all, served his country well and had a major impact on the ships of the U.S. Navy, on the engineering profession, and on the development of nuclear power in the United States.

Rodney Carlisle, *The Journal of American History*: This fine treatment of a remarkable man is highly recommended.

Malcolm Muir Jr, *Technology and Culture*: Francis Duncan is uniquely qualified to write the biography of Admiral Hyman G. Rickover. He is the only person to whom Admiral Rickover ever made himself available for interviews and allowed use of his personal papers, including the letters between himself and his first wife, Ruth. This is an enjoyable book, especially for the thousands who served or serve now in the nuclear programs, civilian or military. It is also an important addition to the history of a man who was one of the giants of the twentieth century.

United States: Robert Loewenthal, *The Journal of Military History*: Victorious in his struggle for excellence, Rickover's personal baton of highly disciplined professionalism was passed without a hitch to those he had selected, educated, and trained to run nuclear power plants safely and efficiently. We still feel his presence; his legacy endures. This book does him long-awaited justice.

Admiral James D. Watkins, USN Ret, Chief of Naval Operations, 1982-86: Impressively researched, insightful, and readable, Duncan captures the Rickover behind the myths and sea stories. This account of his remarkable life and only in America story will appeal to a wide audience.

midshipman to CEO: Admiral Bruce DeMars, USN Ret, Director, Navy Nuclear Propulsion, 1988-96: This excellent book offers insights not available to previous authors who did not enjoy Francis Duncan's close association with Rickover and his family. Particularly useful are early chapters that define the character of the man.

Admiral Kinnard R. McKee, USN Ret, Director, Navy Nuclear Propulsion, 1982-88: This is the authentic biography of Hyman Rickover, one of the most influential persons in naval history and in the creation of an international civilian nuclear power industry. Duncan has given us a national treasure that is both authoritative and enjoyably readable. There's something in it for everyone.

Dr. Theodore Rockwell, former technical director of Rickover's naval reactors program: *Rickover: The Struggle for Excellence* is an original and absolutely fundamental contribution both to naval history and to a general understanding of nuclear power development. It is very objective and accessible. There is no comparable book.

Dr. Gary Weir, Naval Historical Center: I believe *Rickover: The Struggle for Excellence* by Francis Duncan is the best biography of Admiral Rickover.

Robert Rickover, son of Admiral Rickover: **Beyond Engineering** Robert Pool, 1997-07-17. We have long recognized technology as a driving force behind much historical and cultural change. The invention of the printing press initiated the Reformation. The development of the compass ushered in the Age of Exploration, and the discovery of the New World. The cotton gin created

the conditions that led to the Civil War Now in Beyond Engineering science writer Robert Pool turns the question around to examine how society shapes technology Drawing on such disparate fields as history economics risk analysis management science sociology and psychology Pool illuminates the complex often fascinating interplay between machines and society in a book that will revolutionize how we think about technology We tend to think that reason guides technological development that engineering expertise alone determines the final form an invention takes But if you look closely enough at the history of any invention says Pool you will find that factors unrelated to engineering seem to have an almost equal impact In his wide ranging volume he traces developments in nuclear energy automobiles light bulbs commercial electricity and personal computers to reveal that the ultimate shape of a technology often has as much to do with outside and unforeseen forces For instance Pool explores the reasons why steam powered cars lost out to internal combustion engines He shows that the Stanley Steamer was in many ways superior to the Model T it set a land speed record in 1906 of more than 127 miles per hour it had no transmission and no transmission headaches and it was simpler one Stanley engine had only twenty two moving parts and quieter than a gas engine but the steamers were killed off by factors that had little or nothing to do with their engineering merits including the Stanley twins lack of business acumen and an outbreak of hoof and mouth disease Pool illuminates other aspects of technology as well He traces how seemingly minor decisions made early along the path of development can have profound consequences further down the road and perhaps most important he argues that with the increasing complexity of our technological advances from nuclear reactors to genetic engineering the number of things that can go wrong multiplies making it increasingly difficult to engineer risk out of the equation Citing such catastrophes as Bhopal Three Mile Island the Exxon Valdez the Challenger and Chernobyl he argues that is it time to rethink our approach to technology The days are gone when machines were solely a product of larger than life inventors and hard working engineers Increasingly technology will be a joint effort with its design shaped not only by engineers and executives but also psychologists political scientists management theorists risk specialists regulators and courts and the general public Whether discussing bovine growth hormone molten salt reactors or baboon to human transplants Beyond Engineering is an engaging look at modern technology and an illuminating account of how technology and the modern world shape each other Needs and Opportunities in the Modern History of the U.S. Navy Michael J. Crawford, 2018 This is a compilation of a series of papers presented in conjunction with a year long lecture series sponsored by the Naval History and Heritage Command Provided by publisher One Hundred Years of Sea Power George W. Baer, 1996-07-01 A navy is a state s main instrument of maritime force What it should do what doctrine it holds what ships it deploys and how it fights are determined by practical political and military choices in relation to national needs Choices are made according to the state s goals perceived threat maritime opportunity technological capabilities practical experience and not the least the way the sea service defines itself and its way of war This book is a history of the modern U S Navy It explains how the Navy in the century after 1890 was

formed and reformed in the interaction of purpose experience and doctrine

Belief-based Energy Technology

Development in the United States Chi-Jen Yang, 2009 This book is a comparative study of two energy policies that illustrates how and why technical fixes in energy policy failed in the United States In the post WWII era the U S government forcefully and consistently endorsed the development of civilian nuclear power It adopted policies to establish the competitiveness of civilian nuclear power far beyond what would have occurred under free market conditions Even though synthetic fuel was characterized by a similar level of economic potential and technical feasibility the policy approach toward synthetic fuel was sporadic and indeterminate The contrast between the unfaltering faith in nuclear power and the indeterminate attitude toward synthetic fuel raises many important questions The answers to these questions reveal provocative yet compelling insights into the policy making process The author argues that these diverging paths of development can be explained by exploring the dominant government ideology of the time or ideology of the state as the sociology literature describes it The forceful support for nuclear power was a result of a government preoccupied with fighting the Cold War The U S national security planners intentionally idealized and deified nuclear power to serve its Cold War psychological strategy These psychological maneuverings attached important symbolic meaning to nuclear power This symbolism in turn explains the society wide enthusiasm The fabricated myth of the Atomic Age became a self fulfilling prophecy and ushered in a bandwagon market On the other hand a confused indeterminate and relatively powerless welfare state stood behind synthetic fuel The different ideologies of the state explain the government s different attitudes toward nuclear and synfuel endeavors The overarching discovery is a mode of belief based decision making in long term energy planning This discovery goes against the prevalent assumption of rational choice in social sciences The author argues that rational choice assumption is inapplicable because of the extreme long term nature of energy planning It is not usually possible to predict the sociopolitical and economic conditions in the distant future Rational decisions require supporting information which often includes impossible long term foresights One cannot rationally choose between one unknown and another unknown Pivotal decisions in long term energy planning must inevitably be belief based and beliefs are subject to political manipulation and distortions by social mechanisms Understanding these peculiar but pervasive characteristics of energy business bears important lessons for today s decision making about energy technologies and the stakes if anything are even higher than before Energy policy communities historians of the Cold War American history and technology and sociologists would find this book an invaluable resource

A History of the Atomic Space Age and Its Implications for

the Future Willis L. Shirk, 2018-02-12 The Atomic Space Age has been and continues to be an engine for future wealth creation Humanity stands on the verge of becoming an interplanetary species We know we are made of star stuff precisely because many of the isotopes in our bodies originated in the death throes of dying suns With the discovery of nuclear fission in 1938 mankind was for the first time able to glimpse both our distant past and our possible future As with the discovery of

fire and agriculture thousands of years ago wind power hundreds of years ago and steam power and electricity in the nineteenth century we must now learn to tame this powerful new force locked within the heart of the atom Buckminster Fuller once observed that wealth is nothing more than energy compounded by ingenuity Since mass energy can never decrease and ingenuity will only increase there is no limit to the quantity of wealth that our species can and will create using nuclear space propulsion
