Institutional Economics and the Theory of Social Value: Essays in Honor of Marc R. Tool Charles M.A. Clark, 2012-12-06 Marc R Tool both through his writings and his editorship of the Journal of Economic Issues has had a profound influence on institutional economics Tool s efforts in his own words has been to keep values on the agenda of economic inquiry which is another way of saying keep economic inquiry relevant Tool s work on the theory of social value and instrumental valuation has helped to keep institutional economics focused on the core economic and social issues facing society providing both a perspective from which to analyze the economy and a criteria for evaluating outcomes This collection of essays is a testament to this legacy Although these 15 chapters cover a wide and diverse range of topics it is the common themes which are most striking the inescapable necessity of values in economic discourse the central role of valuation in economic activity and most importantly the requirement of democratic participation to achieve efficient solutions to the economic problem These essays are offered to honor a body of work a set of ideas but mostly a man who by directing economic inquiry to these core issues has promoted the continuity of human life and the noninvidious recreation of

Science and Ethics Evandro Agazzi, Fabio Minazzi, 2008 Philosophy of science used to be identified with the logical and methodological analysis of scientific theories and any allusion to values was considered as a deplorable intromission in a philosophical investigation that should remain strictly epistemological As a reaction against this view an opposite sociological approach downplayed the usual virtues of scientific knowledge such as logical rigor and empirical adequacy as artificial imageries that cover the actual nature of science that is a social product submitted to all the kinds of social conditionings and compromises A more balanced view is badly needed today when technoscience is permeating all aspects of our civilization and wise persons understand that we cannot survive without using science and technology but at the same time we need to steer their development in view of the real benefit of humankind We must investigate how science technology and values are legitimately interconnected and in particular how the discourses of ethics politics and religion can enter a fruitful dialogue with science The essays presented in this volume offer a valuable contribution to this interdisciplinary study
