Lung Cancer Advances In Basic And Clinical Research:

Lung Cancer Heine H. Hansen, 2012-12-06 Primary lung tumors are now a global health problem. The incidence has risen dramatically during the last 5-6 decades reflecting the popularity of cigarette smoking. In this, the fifth volume dealing with lung cancer in the series *KappaCANCER TREATMENT AND RESEARCH*, many current research topics are covered by notable authorities including chemoprevention, growth factors, multidrug resistance, new agents, and haematopoietic growth factors. Altogether, the 17 chapters from twelve countries highlight some of the rapid developments taking place in basic and clinical research of lung cancer. These chapters not only give up-to-date information; they will also stimulate further research into this man-made disease which was almost unheard of a century ago. *Recent Advances in Clinical Trial Design and Analysis* Peter F. Thall, 2012-12-06 Clinical trials have two purposes: to treat the patients in the trial and to obtain information which increases our understanding of the disease and especially how patients respond to treatment. Statistical design provides a means to achieve both these aims, while statistical data analysis provides methods for extracting useful information from the trial data. Recent advances in statistical computing have enabled statisticians to implement very rapidly a broad array of methods which previously were either impractical or impossible. Biostatisticians are now able to provide much greater support to medical researchers working in both clinical and laboratory settings. As our collective toolkit of techniques for analyzing data has grown, it has become increasingly difficult for biostatisticians to keep up with all the developments in our own field. *Recent Advances in Clinical Trial Design and Analysis* brings together biostatisticians doing cutting-edge research and explains some of the more recent developments in biostatistics to clinicians and scientists who work in clinical trials. *Cancer Policy: Research and Methods* C.L. Bennett, Tammy Stinson, 2007-08-20 Policy and outcome studies represent a new area of research in oncology. Understanding the factors that affect quality of life, costs of care, patterns of care, and outcomes in oncology is important to providing comprehensive care. Health services research is meant to be both a productive area of research as well as a discipline that improves patient decision making. In sum, *Cancer Policy* highlights some of the important areas of health services research in oncology. *Advances in Allogeneic Hematopoietic Stem Cell Transplantation* Richard K. Burt, Mary M. Brush, 2012-11-28 The field of hematopoietic stem cell transplantation is rapidly evolving. Realization that hematopoietic stem cells give rise to the immune compartment has resulted in clinical trials of hematopoietic stem cell transplantation for patients with autoimmune diseases. Allogeneic hematopoietic transplants are a form of adoptive immunotherapy resulting in beneficial graft-versus-tumor effects. Large numbers of hematopoietic cells can be collected with ease. Therefore, a renewable source of cells for ex vivo genetic manipulations is readily available. Multiple trials combining hematopoietic transplants and gene therapy are in progress. One such application is the infusion of allogeneic lymphocytes containing a suicide gene to abort graft-versus-host disease. Hematopoietic stem cell transplantation is, in reality, the clinical and practical application of cellular therapy. Hematopoietic transplant physicians are, by design or by

practical application evolving into cell and gene therapy specialists The excitement and enthusiasm in hematopoietic transplantation is that it offers a door to the future A future not of drugs or titrating poisonous chemotherapy but rather of cellular and gene therapy

1 ALLOGENEIC PERIPHERAL BLOOD STEM CELL TRANSPLANTATION FOR HEMATOLOGIC DISEASES Martin Korbling University of Texas MD Anderson Cancer Center Houston Texas 77030 INTRODUCTION

Circulating hematopoietic stem cells have emerged as an alternative to bone marrow BM stem cells for allografting For many years the reconstitutive potential of circulating stem cells was questioned peripheral blood stem cells PBSC were even characterized a waste product

1 *Diagnostic and Therapeutic Advances in Hematologic Malignancies* Martin S. Tallman, Leo I. Gordon, 2007-11-23 There is no field of medicine in which advances in therapy have been so closely linked to a better understanding of molecular medicine than in the area of hematologic malignancies Diagnostic and Therapeutic Advances in Hematologic Malignancies will provide practitioners and academic clinicians with a better understanding of the constant evolving concepts in this area

Technical and Biological Components of Marrow Transplantation C. Dean Buckner, Reginald Clift, 1995-08-31 Technical and Biological Components of Marrow Transplantation presents up to date information on the scientific and technological advances that will extend and improve the clinical application of bone marrow transplantation The book includes the latest information on chronic myeloid leukemia and thalassemia advances in supportive care cytokines and progenitor expansion and cord stem cell technology Soon more of patients will receive marrow transplants as part of the therapy for solid tumors and metabolic disease than for the treatment of hematologic disease The contributors to this volume describe some of these applications hinting at yet further exciting possibilities

Advances in Radiation Therapy Bharat B. Mittal, James A. Purdy, K.K. Ang, 2012-12-06 Recent advances in radiation oncology have depended upon and are intertwined with subsequent scientific discoveries and the development of new techniques in the fields of radiation and molecular biology physics electrical engineering surgery and medical oncology This volume describes how some of the recent discoveries in the radiological sciences have influenced the way radiation oncology is practised As there are many advances in this field the Editors have chosen to concentrate on selected topics in clinical radiotherapy radiation physics and biology and technical innovations that have had a major impact on radiation oncology in the past twenty years It is hoped that the techniques described in this volume will increase tumor control and prolong patient survival and at the same time decrease radiation induced side effects and complications

Biological and Hormonal Therapies of Cancer Kenneth A. Foon, Hyman B. Muss, 2012-12-06 This volume Biological and Hormonal Therapies of Cancer which is part of the series Cancer Treatment and Research presents selected new information concerning biologic and hormonal therapy of cancer We have attempted to provide the reader with topics of major interest in a timely fashion There is renewed interest in biologic therapy of cancer Two chapters review the role of interferon in the hematologic malignancies and in solid tumors Vaccine therapies have come to the forefront of cancer therapy recently and two chapters approach different strategies of

vaccine therapies one reviews the cellular vaccine therapies and another the anti idotype approach The hormonal therapy chapters focus on current uses of endocrine therapy in endometrial breast and prostate cancer In addition hormonal strategies for the prevention of breast cancer and endometrial cancer including exciting information relating to phytochemicals are presented The effects of tamoxifen on endometrium is a topic of major interest and is discussed in detail Finally there is a chapter on estrogen receptor expression and regulation in human breast cancer These chapters are all written by experts in the field and contain timely and relevant information of interest to laboratory and clinical scientists and practitioners alike Biologic and endocrine therapies represent major areas of cancer research interest The advent of newer biologic therapies including new antibody targeted treatments and the use of biologics as tumor modulators to enhance the effects of other treatment regimens is an exploding avenue of research

Surgical Oncology Raphael E. Pollock, 2012-12-06 Among the standard oncology modalities surgical oncology is singular in that it lacks a separate board certification or even an added qualification mechanism Card carrying surgical oncologists are certified by the American Board of Surgery as are all other general surgeons What distinguishes the surgical oncologist is a set of cognitive skills rather than a specific armamentarium of surgical techniques This different conceptual framework is derived from extensive additional training that leads to an in depth understanding of the natural history and biologic behavior of the various solid tumor systems Equipped with this perspective the surgical oncologist is particularly well positioned to integrate the various available therapeutic modalities into a coherent care program for the solid tumor patient As a central theme the chapters of this book demonstrate that increasingly sophisticated diagnostic and staging approaches are helping to move chemotherapy and radiotherapy into the preoperative neoadjuvant setting This fundamental alteration is based on the awareness that even early stage solid tumor disease is frequently systemic at the time of presentation at least on a subclinical level And although the primary tumor may be controllable by surgery with radiotherapy the uncontrolled and initially clinically unapparent distant disease ultimately determines patient survival The other perspective driving the neoadjuvant approach is an emerging awareness that for most solid tumor systems neoadjuvant treatment responses can facilitate less mutilating surgery with comparable levels of local disease control

Drug Resistance William N. Hait, 2012-12-06 Resistance to treatment represents the final common outcome for far too many patients with cancer Even our most promising new drugs fall victim to drug resistance Hormones and newer biological therapies though safe and active also lose their activity over time In this volume of Drug Resistance leading investigators in the field have reviewed the most basic mechanisms of drug resistance and have proposed ways to modulate resistance This comprehensive volume should be of value for basic and clinical scientists who wish to delve more deeply into this intriguing problem in the laboratory and devastating problem in the clinic

Diagnostic and Therapeutic Advances in Pediatric Oncology David O. Walterhouse, Susan L. Cohn, 2012-12-06 The purpose of Diagnostic and Therapeutic Advances in Pediatric Oncology for the Cancer Treatment and Research Series is to

provide an up to date summary of how recent advances in cancer research are being applied to the care of children with solid tumors The interface of cancer research with clinical practice in pediatric oncology has never been more intimate than today While researchers are identifying oncogenes and tumor suppressor genes and are studying their specific functions clinicians are using knowledge of oncogenes and tumor suppressor genes for diagnosing cancer in children for therapeutic decision making purposes and for prognostic purposes The first three chapters in this book describe models for understanding the causes of childhood cancer that were perhaps initially identified by clinicians and that are now being studied and understood by researchers These chapters will describe research evidence that supports roles for the involvement of normal developmental regulatory genes in childhood oncogenesis of abnormal immune regulation in childhood oncogenesis and of heredity in childhood oncogenesis The next eight chapters are devoted to descriptions of the application of new research developments to clinical practice with reference to the most common forms of solid tumors of childhood outside the central nervous system The final chapter will describe late effects of childhood cancer and its therapy and the impact research is having on understanding and perhaps preventing these late effects

Peritoneal Carcinomatosis: Principles of Management Paul H. Sugarbaker, 2012-12-06 Paul Sugarbaker and his colleagues have persevered in the study and treatment of peritoneal carcinomatosis The peritoneal cavity has many unique and incompletely appreciated properties These properties coupled with the biologic behavior of many cancers results in the seeding and growth of these cancers on the peritoneum Many of these cancers remain localized to the peritoneum only never metastasizing to other sites One possible reason for this may be the obstruction of the afferent lymphatics on the undersurface of the diaphragm The mucopolysaccharides produced by many of these neoplasms are probably viscous enough to obstruct these lymphatics leading to the syndrome of pseudomyxoma peritonei Many of the neoplasms taking residence on the peritoneum have extremely long cell cycle times and are resistant to radiotherapy and many chemotherapeutic agents However much can be done for these patients resection of primary cancers omentectomies to reduce ascites formation management of recurrent ascites management of intestinal obstruction nutritional care and hopefully intraperitoneal chemotherapy We have reviewed many of these problems in the past 17 Dr Sugarbaker and his colleagues have organized the current state of knowledge and technology for continuing use The book provides a basis for thoughtful prospective research planning John S Spratt M D F A C S Professor of Surgery The James Graham Brown Cancer Center University of Louisville Louisville Kentucky References 1 Long RTL Spratt JS Dowling E Gastrointestinal Oncology A. B. Benson, 2012-12-06 Gastrointestinal tract malignancies encompass a spectrum of diseases with marked differences in etiology incidence biological behavior and treatment outcome The incidence of new gastrointestinal cases recorded yearly for patients residing in the United States is approximately 230 000 representing nearly 20% of all cancer cases Worldwide gastrointestinal malignancies are responsible for the largest number of cancer deaths particularly because of the high incidence of hepatocellular and gastric cancer in other countries

Gastrointestinal Oncology is directed to those most involved in the multidisciplinary approach to the gastrointestinal cancer patient including medical radiation and surgical oncologists gastroenterologists interventional radiologists pathologists oncology nurses and oncology physicians in training

Management of Infectious Complication in Cancer Patients

Gary A. Noskin, 2007-11-23 Infection is a major cause of morbidity and mortality in patients with neoplastic disease because of compromised host defenses These defects result in an increased risk of infection and its complications The nature of the underlying malignancy the immunodeficiencies associated with it and the treatments directed against it are all important determinants of infection In recent years the introduction of more intensive chemotherapeutic regimes and the widespread use of bone marrow and peripheral stem cell transplantation have changed the pattern of infection in many patients Furthermore the increasing use of central venous access devices and antimicrobial prophylaxis has changed the epidemiology of infection in these patients as well The goal of this volume in the Cancer Treatment and Research series is to emphasize that while the management of infection in cancer patients is common it is constantly changing With the increasing complexity of these patients optimal management requires a multidisciplinary approach Ultimately it is hoped that this book will assist clinicians in the diagnosis management and prevention of infection in order to optimize care for patients with cancer

Mammary Tumor Cell Cycle, Differentiation, and Metastasis Robert B. Dickson, Marc E. Lippman, 2012-12-06 Mammary Tumor Cell Cycle Differentiation and Metastasis is the fifth volume since 1988 in a series designed to broadly examine current advances in the cellular and molecular biology of breast cancer As in previous volumes the editors have invited recognized experts in cutting edge topics to provide a chapter focused on their area of research The editors have turned to the researchers who study rodent models of the disease and to those who study the cellular and molecular basis of human breast cancer The first section of the book is devoted to new mouse models of mammary development and tumorigenesis The second section moves to studies of human breast cancer and focuses on receptors signalling and the cell cycle The final section deals with defective tissue interactions in human breast cancer We are now in a period of extremely rapid accumulation of data on the molecular and cellular biology of breast cancer These findings are highlighted in chapters from Mammary Tumor Cell Cycle Differentiation and Metastasis Advances in Cellular and Molecular Biology of Breast Cancer

Gynecologic Oncology Robert F. Ozols, 2013-03-14 In recent years there have been major advances in the treatment of patients with gynecologic malignancies Perhaps the biggest advances have been in the area of ovarian cancer Gynecologic Oncology focuses primarily upon this malignancy This volume discusses cytoreductive surgery screening for ovarian cancer chemotherapy new chemotherapeutic drugs the controversy regarding the role of high dose chemotherapy in gynecologic cancers the hereditary basis for gynecologic malignancies molecular genetics molecular biology and new biologic therapies Other topics covered are the treatment of all stages of cervical cancer including radiotherapy In addition a chapter on advances in the pathology of gynecologic cancers is included The advances made in the treatment of gynecologic

malignancies are due in part to the clinical studies performed by many of the contributors to this volume Clinical advances have been the result of multidisciplinary approaches which involve molecular biologists pathologists radiation therapists surgeons and chemotherapists Future advances will continue to rely upon collaborative interaction among these different disciplines

Ethical Issues in Cancer Patient Care Peter Angelos,2013-04-17 This book addresses a variety of ethical issues that arise in the care of oncology patients Many volumes have been written on medical ethics in the past 30 years However few have focused on ethical issues specific to the care of cancer patients This book brings together such a focused examination The contributors are experienced clinicians ethicists medical humanists and medical educators The issues raised have direct relevance to the care of oncology patients in treatment as well as research settings The chapters address issues that are central to contemporary medical practice and medical ethics inquiry Any practicing clinician will be well aware of the problems of communication and how uncertainty cross cultural issues and religious influences can impact patient care The limits of care and the role of advance directives and palliative care are common issues that must be addressed in treating patients at the end of life For oncologists and oncology patients participation in clinical trials may be a thorny topic especially when phase I clinical trials are being considered The impact of managed care and reimbursement issues cannot be avoided in the contemporary patient care and similarly cannot be neglected when considering the ethical ramifications raised No discussion of ethics in oncology can be complete without attention to the specific challenges raised by the pediatric patient with cancer All of these topics are explored by the contributors to this book
