P. Newnham, M. G. Cardio-Respiratory Control in Vertebrates Mogens L. Glass, Stephen C. Wood, 2009-07-24 Hopefully this book will be taken off of the shelf frequently to be studied carefully over many years More than 40 researchers were involved in this project which examines respiration circulation and metabolism from sh to the land vertebrates including human beings A breathable and stable atmosphere rst appeared about 500 million years ago Oxygen levels are not stable in aquatic environments and exclusively water breathing sh must still cope with the ever changing levels of O₂ and with large temperature changes This is reflected in their sophisticated count current systems with high O₂ extraction and internal and external O₂ receptors 2.2 The conquest for the terrestrial environment took place in the late Devonian period 355-359 million years ago and recent discoveries portray the gradual transitional evolution of land vertebrates The oxygen rich and relatively stable atmospheric conditions implied that oxygen sensing mechanisms were relatively simple and in gain compared with acid base regulation Recently physiology has expanded into related fields such as biochemistry molecular biology morphology and anatomy In the light of the work in these fields the introduction of DNA based cladograms which can be used to evaluate the likelihood of land vertebrates and lung sh as a sister group could explain why their cardio respiratory control systems are similar The diffusing capacity of a duck lung is 40 times higher than that of a toad or lung sh Certainly some animals have evolved to rich high performance levels

The Oxford Handbook of Evolutionary Medicine Martin Brüne, Wulf Schiefenhövel, 2019-01-31

Medicine is grounded in the natural sciences where biology stands out with regard to our understanding of human physiology and the conditions that cause dysfunction Ironically though evolutionary biology is a relatively disregarded field One reason for this omission is that evolution is deemed a slow process Indeed the macroanatomical features of our species have changed very little in the last 300 000 years A more detailed look however reveals that novel ecological contingencies partly in relation to cultural evolution have brought about subtle changes pertaining to metabolism and immunology including adaptations to dietary innovations as well as adaptations to the exposure to novel pathogens Rapid pathogen evolution and evolution of cancer cells cause major problems for the immune system Moreover many adaptations to past ecologies have actually turned into risk factors for somatic disease and psychological disorder in our modern worlds i.e. mismatch among which epidemics of autoimmune diseases cardiovascular diseases diabetes and obesity as well as several forms of cancer stand out One could add depression anxiety and other psychiatric conditions to the list

The Oxford Handbook of Evolutionary Medicine is a compilation of up to date insights into the evolutionary history of ourselves as a species exploring how and why our evolved design may convey vulnerability to disease Written in a classic textbook style emphasising physiology and pathophysiology of all major organ systems the *Oxford Handbook of Evolutionary Medicine* is valuable reading for students

Environment* G. Bonsignore,2012-12-06 This volume documents the proceedings of a symposium on Lung in its Environment
held at the Ettore Majorana Center for Scientific Culture in Erice Sicily between 16th June and 21st June 1980 This was
attended by about 200 participants drawn from Europe as a whole but the majority were from Southern Europe The
discussion was recorded either in English or Italian and the tapes were reduced to a verbatim typescript by the Ente
Nazionale Interpreti Congresso The verbatim typescript has been edited using a few guiding principles as follows 1 Titles and
honorifics have been eliminated unless the statement is addressed to a specific person 2 The style of the speakers in the
discussion has been preserved as far as possible and not reduced to a strictly grammatical format 3 Where references to
illustrations e g on the blackboard are made the comments have been left unaltered and many are understandable Removing
them detracted from the sense 4 The air of informality in the proceedings has been preserved so far as possible 5 The
responsibility for the discussion rests solely with the editors and no contributor has had the opportunity of correcting what
he said 6 No manuscript was received from two participants but the discussion of their presentations has been included since
it contains some points of substance 7 *Allergy and Allergic Diseases* A. Barry Kay,Jean Bousquet,Patrick G. Holt,Allen P.
