Mayall, 2012-12-06 Publication of the Proceedings of the Fourth and Fifth International Congresses of Lymphology celebrates the 10th anniversary of the founding of the International Society of Lymphology a SOO member scientific association representing the world's foremost authorities on lymph nodes lymphatics lymphocytes and lymph in health and disease Utilizing a multidisciplinary approach and a wide variety of techniques including visualization interruption ablation diversion sampling and characterization of regional lymph and lymphatic pathways Congress participants from more than 40 different nations delved into such varied topics as lymphatic spread of cancer tumor immunology propulsion of lymph microcirculatory physiology improved methods of tumor detection and diagnosis electron microscopy of lymphatic capillaries lymphoscopy immunoprotein chemistry relationship of viruses to neoplasia radiotherapy of lymphomas structure and function of normal and abnormal lymphocytes transplantation biology lymphovascular surgery edema including lymphedema and effusion portal hypertension filariasis congenital lymphatic malformations and protein losing enteropathy and nephropathy Only a few years after William Harvey discovered the circulation of blood Gaspar Asellius discovered the lymphatic system When asked in the twilight of his career to enter the raging controversy about this new circulation Harvey responded It is useless for you to spur me to gird myself to any new investigations seeing now that I am not only ripe in years but also weary It seems to me indeed that I am entitled to ask for my honorable discharge from duty **Cumulated Index Medicus**, 1972 **Radiocontrast Agents** M. Sovak, 2012-12-06 Contrast media are drugs by default Had there been no default there would be no need for a related pharmacology and thus no need for this book Radiographic contrast media CM are substances whose primary purpose is to enhance diagnostic information of medical imaging systems The position of CM in pharmacology is unique First there is the unusual requirement of biological inertness An ideal CM should be completely biologically inert i.e. stable not pharmacologically active and efficiently and innocuously excretable Because they fail to meet these requirements CM must be considered drugs The second unusual aspect of CM is that they are used in large quantities their annual production being measured in tens of tons It is not in spite of but because of the increased use of new radiographic systems computed tomography digital radiography etc that consumption is on the rise And it is not likely that the other emerging imaging modalities NMR ultrasonography etc will displace radiographic CM soon it is quite probable that these remarkable compounds will continue to play an active role in diagnostic imaging in the foreseeable future
