Macbrydes Signs And Symptoms:

MacBryde's Signs and Symptoms Cyril Mitchell MacBryde, Robert Stanley Blacklow, 1983 **The Nature of Suffering and the Goals of Medicine** Eric J. Cassell Clinical Professor of Public Health Cornell University Medical College, 1991-10-03

The Nature of Suffering underscores the change that is taking place in medicine from a basic concern with disease to a greater focus on the sick person. Cassell centers his discussion on the problem of suffering because he says its recognition and relief are a test of the adequacy of any system of medicine. He describes what suffering is and its relationship to the sick person. Bodies do not suffer; people do. An exclusive concern with scientific knowledge of the body and disease therefore impedes an understanding of suffering and diminishes the care of the suffering patient. The growing criticism that medicine is not sufficiently humanistic does not go deep enough to provide a basis for a new understanding of medicine. New concepts in medicine must have their basis in its history and in the development of ideas about disease and treatment. Cassell uses many stories about patients to demonstrate that despite the current dominance of science and technology there can be no diagnosis, search for the cause of the patient's disease, prognostication or treatment without consideration of the individual sick person. Recent trends in medicine and society, Cassell believes, show that it is time for the sick person to be not merely an important concern for physicians but the central focus of medicine. He addresses the exciting problems involved in such a shift. In this new medicine, doctors would have to know the person as well as they know the disease. What are persons, however, and how are doctors to comprehend them? The kinds of knowledge involved are varied, including values and aesthetics as well as science. In the process of knowing the experience of patient and doctor move to center stage. He believes that the exploration of the person will engage medicine in the 21st century just as understanding the body has occupied the last hundred years.

Signs and Symptoms Cyril Mitchell MacBryde, 1957 The Nature of Suffering and the Goals of Medicine Eric J. Cassell, 2004-03-25

This is a revised and expanded edition of a classic in palliative medicine originally published in 1991. With three added chapters and a new preface summarizing our progress in the area of pain management, this is a must have for those in palliative medicine and hospice care. The obligation of physicians to relieve human suffering stretches back into antiquity. But what exactly is suffering? One patient with metastatic cancer of the stomach from which he knew he would shortly die said he was not suffering. Another someone who had been operated on for a minor problem in little pain and not seemingly distressed said that even coming into the hospital had been a source of pain and not suffering. With such varied responses to the problem of suffering, inevitable questions arise. Is it the doctor's responsibility to treat the disease or the patient? And what is the relationship between suffering and the goals of medicine? According to Dr. Eric Cassell, these are crucial questions but unfortunately have remained only queries void of adequate solutions. It is time for the sick person, Cassell believes, to be not merely an important concern for physicians but the central focus of medicine. With this in mind, Cassell argues for an understanding of what changes should be made in order to successfully treat the sick while

alleviating suffering and how to actually go about making these changes with the methods and training techniques firmly rooted in the doctor's relationship with the patient Dr Cassell offers an incisive critique of the approach of modern medicine Drawing on a number of evocative patient narratives he writes that the goal of medicine must be to treat an individual's suffering and not just the disease In addition Cassell's thoughtful and incisive argument will appeal to psychologists and psychiatrists interested in the nature of pain and suffering

Lumbar Spine Syndromes Gunnar B.J. Andersson, Thomas W. McNeill, 2012-12-06 The question facing anyone contemplating a book on low back pain is Why write another book It is certainly true that there are many books on this topic addressing a wide variety of audiences Some books are all inclusive and scholarly in nature others are personal descriptions of diagnostic and treatment philosophies This book is a combination of these two extremes It represents our views on the low back problem supported by scientific data Most aspects on back pain presented in this book can be found in other texts The organization of the material is unique however Our approach is to start by listening to and looking at the patient It becomes apparent then that patients can be classified into one of the syndromes described in chapters 4 through 13 We believe that this syndrome classification which is quite simple to make clinically will allow you to diagnose and treat your patients more effectively To set the stage for the syndrome chapters the first three chapters of the book are generic to the remaining chapters They review the epidemiology pathology biomechanics etiologic theory diagnostic methods and treatment modalities applicable to the low back syndromes They should be read before the syndrome chapters At the end of the book you will find four chapters that are specific to disease entities
