Computer-Integrated Manufacturing Handbook V.D. Hunt,2012-12-06 Manufacturing has entered the early stages of a revolutionary period caused by the convergence of three powerful trends The rapid advancement and spread of manufacturing capabilities worldwide has created intense competition on a global scale The emergence of advanced manufacturing technologies is dramatically changing both the products and processes of modern manufacturing Changes in traditional management and labor practices organizational structures and decision making criteria represent new sources of competitiveness and introduce new strategic opportunities These trends are interrelated and their effects are already being felt by the u s manufacturing community Future competitiveness for manufacturers worldwide will depend on their response to these trends Based on the recent performance of u s manufacturers efforts to respond to the challenges posed by new competition technology and managerial opportunities have been slow and inadequate Domestic markets that were once secure have been assailed by a growing number of foreign competitors producing high quality goods at low prices In a number of areas such as employment capacity utilization research and development expenditures and capital investment trends in u s manufacturing over the last decade have been unfavorable or have not kept pace with major foreign competitors such as Japan There is substantial evidence that many u s manufacturers have neglected the manufacturing function have overemphasized product development at the expense of process improvements and have not begun to make the adjustments that will be necessary to be competitive
