Managing Information In The Financial Services:

Challenges of Managing Information Quality in Service Organizations Al-Hakim, Latif, 2006-09-30 Incorrect and misleading information associated with an enterprise's production and service jeopardize both customer relationships and customer satisfaction and ultimately have a negative effect on revenue. This book provides insight and support for academic professionals as well as for practitioners concerned with the management of information. Provided by publisher *Managing Information Technology Resources in Organizations in the Next Millennium* Information Resources Management Association. International Conference, 1999-01-01 *Managing Information Technology Resources in Organizations in the Next Millennium* contains more than 200 unique perspectives on numerous timely issues of managing information technology in organizations around the world. This book featuring the latest research and applied IT practices is a valuable source in support of teaching and research agendas. Management Information Systems : Made Easy Dr. Padmakar Shahare I Dr. Ajay Pethe I Dr. Mukul Burghate, Rapid globalization coupled with the growth of the Internet and Information Technology (IT) has led to a complete transformation in the way businesses or organizations function today. This has not only affected the management culture but has also led to an increase in competition in terms of markets and resources. Businesses have become more customer driven and e-business is gaining popularity. Traditional means of communication (correspondence) have given way to online dealings (e-mails and chats). With such a radical shift in the approach to doing business came the need for specialized systems to handle the various departments and functions in an organization. Management Information System (MIS) is an organized and well-structured system used by organizations for the collection, storage, processing, and dissemination of data in the form of information that facilitates the smooth functioning of the organization. Management information systems involve three primary resources: people, technology, and information or decision making. It is in this context that a textbook on introduction to the subject of MIS is presented to the students of Management program. The book contains the syllabus from basics of the subjects going into the intricacies of the subjects. All the concepts have been explained with relevant examples and diagrams to make it interesting for the readers. An attempt is made here by the experts to assist the students by way of providing case-based study material as per the curriculum with non-commercial considerations. However, it is implicit that these are exam-oriented Study Material and students are advised to attend regular classroom classes in the Institute and utilize reference books available in the library for in-depth knowledge.
