Sven Walter, Heinz-Dieter Heckmann

Mind Causation Action:

Physicalism and Mental Causation Sven Walter, Heinz-Dieter Heckmann, 2015-11-04 Physicalism the thesis that everything there is in the world including our minds is constituted by basic physical entities has dominated the philosophy of mind during the last few decades But although the conceptual foundations of the physicalist agenda including a proper explication of notions such as causation determination realization or even physicalism itself must be settled before more specific problems e.g. the problems of mental causation and human agency can be satisfactorily addressed a comprehensive philosophical reflection on the relationships between the various key concepts of the debate on physicalism is yet missing This book presents a range of essays on the conceptual foundations of physicalism mental causation and human agency written by established and leading authors in the field

Embodied Minds in Action Robert Hanna, Michelle Maiese, 2009-01-08 In *Embodied Minds in Action* Robert Hanna and Michelle Maiese work out a unified treatment of three fundamental philosophical problems the mind body problem the problem of mental causation and the problem of action This unified treatment rests on two basic claims The first is that conscious intentional minds like ours are essentially embodied This entails that our minds are necessarily spread throughout our living organismic bodies and belong to their complete neurobiological constitution So minds like ours are necessarily alive The second claim is that essentially embodied minds are self organizing thermodynamic systems This entails that our mental lives consist in the possibility and actuality of moving our own living organismic bodies through space and time by means of our conscious desires The upshot is that we are essentially minded animals who help to create the natural world through our own agency This doctrine the Essential Embodiment Theory is a truly radical idea which subverts the traditionally opposed and seemingly exhaustive categories of Dualism and Materialism and offers a new paradigm for contemporary mainstream research in the philosophy of mind and cognitive neuroscience

Causation in Early Modern Philosophy Steven Nadler, 2010-11-01 *Understanding Mental Causation* Andrea White, 2024-12-17 *Understanding Mental Causation* proposes a new non relational theory of mental causation Andrea White believes that contemporary philosophy of mind labours under a misapprehension of what mental causation is supposed to be This volume explains where the leading theories go astray and how the new theory proposed solves critical problems for philosophers of mind and action Ordinary experience suggests that what we do with our bodies causally depends somehow on what is going on in our minds However the problem of how to understand the causal relationship between mind and body remains Contemporary philosophy of mind is shaped by the question how is it possible for the mental to causally interact with the physical Mental causation is often presented as a cause effect relation between mental and physical entities This understanding of mental causation is widely endorsed because it seems like a straightforward explanation of what is going on when people act intentionally Desires and beliefs are seen as causes of the actions they explain entailing the existence of causal relations between mental items and physical events White calls this the causalist view of intentional

action This view is not universally accepted The non causalist view denies that intentional action entails the existence of causal relations between mental items and physical events However non causalists reach this conclusion by arguing that explanations of intentional actions which cite beliefs or desires are not usually causal explanations at all White presents a theory of intentional action that falls between the causalist and non causalist views She rejects the idea that as a cause is how we should understand the place of mentality in intentional action Concepts like belief desire and intention do not refer to items which can stand in causal relations to actions or physical events However like causalists she holds that explanations of intentional actions which cite the agent s thoughts do give causal information This intermediary view demands a new theory about the causation that is on display when human beings act intentionally one that does not reduce mental causation to a relation between mental items and physical events Orthodox theories of causation inspired by David Hume assume that causation is always a relation between events Therefore the causation demonstrated in intentional action must be a relation because all causation is and will count as mental causation if and only if at least one of the terms of that relation is a mental entity White challenges this orthodoxy by presenting her own non relational theory of causation Denying causation is always a relation she holds instead that causation is a general type of process in which substances engage and that exercising a causal power is to engage in a process White shows how this novel theory can be used to provide a better understanding of intentional action and the mental causation associated with it She suggests that to act intentionally is to engage in a process and as such to exercise a power but a power of a special sort The power to act intentionally is a power to structure one s own activities so that they demonstrate a pattern a pattern which is only revealed by attributing mental states to the agent So when an agent acts intentionally they engage in the process of mental causation because the agent is manifesting a special power to organise their activities into a pattern that can be made sense of by appeal to mental concepts Broadening our understanding of causation and more specifically incorporating the concepts power and process opens up new ways of understanding intentional action and mental causation In *Understanding Mental Causation* White presents a compelling new account in this key area of philosophy of mind

Minding Minds Radu J. Bogdan, 2003-08-11 Drawing on philosophical psychological and evolutionary perspectives Bogdan analyzes how primates create the resources for metamentation the ability of the mind to think about its own thoughts Mental reflexivity or metamentation a mind thinking about its own thoughts underpins reflexive consciousness deliberation self evaluation moral judgment the ability to think ahead and much more Yet relatively little in philosophy or psychology has been written about what metamentation actually is or about why and how it came about In this book Radu Bogdan proposes that humans think reflexively because they interpret each other s minds in social contexts of cooperation communication education politics and so forth As naive psychology interpretation was naturally selected among primates as a battery of practical skills that preceded language and advanced thinking Metamentation began as interpretation mentally rehearsed through mental sharing of attitudes and information about items

of common interest interpretation conspired with mental rehearsal to develop metamentation Drawing on philosophical psychological and evolutionary perspectives Bogdan analyzes the main phylogenetic and ontogenetic stages through which primates abilities to interpret other minds evolve and gradually create the opportunities and resources for metamentation Contrary to prevailing views he concludes that metamentation benefits from but is not a predetermined outcome of logical abilities language and consciousness

Computational Cultural Neuroscience Joan Y. Chiao, 2024-08-02 This book provides novel insights into the study of empirical computational approaches in the field of cultural neuroscience It discusses and analyses topics such as cultural intelligence cultural machine learning cultural brain dynamics and cultural security This comprehensive text engages with computational principles to guide the research on the influence of cultural environments on human genetics It explores the theoretical and methodological approaches involved in computational neuroscience The author elucidates how cultural processes intersect with the structural organization of the nervous system contributing to the study of computational principles and neural information processing mechanisms at the cultural level Research in this subject area can help provide better understanding of the role of computation in cultural neuroscience stimulating further research into practice and policy Computational Cultural Neuroscience An Introduction is the ideal resource for academics researchers and students of psychology neuroscience computer science or philosophy who are interested in cultural neuroscience

Scientific and Philosophical Perspectives in Neuroethics James J. Giordano, Bert Gordijn, 2010-02-18 While neuroscience has provided insights into the structure and function of nervous systems hard questions remain about the nature of consciousness mind and self Perhaps the most difficult questions involve the meaning of neuroscientific information and how to pursue and utilize neuroscientific knowledge in ways that are consistent with some construal of social good Written for researchers and graduate students in neuroscience and bioethics Scientific and Philosophical Perspectives in Neuroethics explores important developments in neuroscience and neurotechnology and addresses the philosophical ethical and social issues and problems that such advancements generate It examines three core questions First what is the scope and direction of neuroscientific inquiry Second how has progress to date affected scientific and philosophical ideas and finally what ethical issues and problems does this progress and knowledge incur both now and in the future

Philosophy of Mind Jaegwon Kim, 2018-04-19 This book explores a range of issues in the philosophy of mind with the mind body problem as the main focus It serves as a stimulus to the reader to engage with the problems of the mind and try to come to terms with them and examines Descartes s mind body dualism

Ontology of Consciousness Helmut Wautischer, 2008-04-11 Scholars from many different disciplines examine consciousness through the lens of intellectual approaches and cultures ranging from cosmology research and cell biophysics laboratories to pre Columbian Mesoamerica and Tibetan Tantric Buddhism in a volume that extends consciousness studies beyond the limits of current neuroscience research The hard problem of today s consciousness studies is subjective experience understanding why some brain processing is accompanied

by an experienced inner life Recent scientific advances offer insights for understanding the physiological and chemical phenomenology of consciousness But by leaving aside the internal experiential nature of consciousness in favor of mapping neural activity such science leaves many questions unanswered In Ontology of Consciousness scholars from a range of disciplines from neurophysiology to parapsychology from mathematics to anthropology and indigenous non Western modes of thought go beyond these limits of current neuroscience research to explore insights offered by other intellectual approaches to consciousness These scholars focus their attention on such philosophical approaches to consciousness as Tibetan Tantric Buddhism North American Indian insights pre Columbian Mesoamerican civilization and the Byzantine Empire Some draw on artifacts and ethnographic data to make their point Others translate cultural concepts of consciousness into modern scientific language using models and mathematical mappings Many consider individual experiences of sentience and existence as seen in African communalism Hindi psychology Zen Buddhism Indian vibhuti phenomena existentialism philosophical realism and modern psychiatry Some reveal current views and conundrums in neurobiology to comprehend sentient intellection Contributors Karim Akerma Matthijs Cornelissen Antoine Courban Mario Crocco Christian de Quincey Thomas B Fowler Erlendur Haraldsson David J Hufford Pavel B Ivanov Heinz Kimmerle Stanley Krippner Armand J Labb James Maffie Hubert Markl Graham Parkes Michael Polemis E Richard Sorenson Mircea Steriade Thomas Szasz Mariela Szirko Robert A F Thurman Edith L B Turner Julia Watkin Helmut Wautischer Postanalytic and Metacontinental Jack Reynolds,James Chase,James Williams,2010-06-03
