North American Deserts:

The North American Deserts Edmund Carroll Jaeger, 1957 Compares and contrasts the 5 North American deserts according to terrain weather and wildlife *Fishes in North American Deserts* Robert J. Naiman, David L. Soltz, 1981-07 Surveys the biology and ecology of desert fishes Detailed articles cover the fishes physiological evolutionary and ecological characteristics as well as the nature and management and conservation problems of their habitats **The North American Deserts** Edmund C. Jaeger, 1961 **Few and Far Between**, 1997 Campbell's pairings bring forth both what is hidden and What is revealed in the desert the passing of time and timelessness the flora that manages to survive despite the meager resources and the ancients for whom the desert has measured life His years of training in anthropology and the natural sciences have given Campbell the rare ability to remain objective Yet he sees with all the fullness of experience the ways that nature and time have transformed these places and he knows that this alone can speak wonders Thus to travel with Campbell is to experience the unfolding of the desert's deeply held secrets **Botanical Features of North American Deserts** Daniel Tremblay MacDougal, 1908 *Encyclopedia of Deserts* Michael A. Mares, 2017-01-19 Encyclopedia of Deserts represents a milestone it is the first comprehensive reference to the first comprehensive reference to deserts and semideserts of the world Approximately seven hundred entries treat subjects ranging from desert survival to the way deserts are formed Topics include biology birds mammals reptiles amphibians fishes invertebrates plants bacteria physiology evolution geography climatology geology hydrology anthropology and history The thirty seven contributors including volume editor Michael A Mares have had extensive careers in deserts research encompassing all of the world's arid and semiarid regions The Encyclopedia opens with a subject list by topic an organizational guide that helps the reader grasp interrelationships and complexities in desert systems Each entry concludes with cross references to other entries in the volume inviting the reader to embark on a personal expedition into fascinating previously unknown terrain In addition a list of important readings facilitates in depth study of each topic An exhaustive index permits quick access to places topics and taxonomic listings of all plants and animals discussed More than one hundred photographs drawings and maps enhance our appreciation of the remarkable life landforms history and challenges of the world's arid land *Physiological Ecology of North American Desert Plants* Stanley D. Smith, Russell Monson, Jay E. Anderson, 2012-12-06 This book begins with the physical and biological characterization of the four North American deserts and a description of the primary adaptations of plants to environmental stress In the following chapters the authors present case studies of key species representing dominant growth forms of the North American deserts and provide an up to date and comprehensive review of the major patterns of adaptations in desert plants One chapter is devoted to several important exotic plants that have invaded North American deserts The book ends with a synthesis of the adaptations and resource requirements of North American desert plants Further it addresses how desert plants may respond to global climate change **Botanical Features of North**

American Deserts Daniel Trembly MacDougal, 1971 *The Biology of Deserts* David Ward, 2016-08-25 This book offers a concise but comprehensive introduction to desert ecology and adopts a strong evolutionary focus As with other titles in the Biology of Habitats Series the emphasis in the book is on the organisms that dominate this harsh environment although theoretical and experimental aspects are also discussed In this updated second edition there is a greater focus on the effects of climate change and some of its likely effects on deserts seeing desertification as among the most serious results of climate change leading ultimately to the increasing size of arid and semi arid regions The Biology of Deserts Second Edition includes a wide range of ecological and evolutionary issues including morphological and physiological adaptations of desert plants and animals species interactions the importance of predation and parasitism food webs biodiversity and conservation It features a balance of plant and animal both invertebrate and vertebrate examples and also emphasizes topical applied issues such as desertification and invasive species The book concludes by considering the positive aspects of desert conservation This accessible textbook is intended for senior undergraduate and graduate students as well as professional ecologists conservation practitioners and resource managers working in the field of desert ecology

Arid Land Ecosystems: Volume 1 R. A. Perry, D. W. Goodall, 1979-03-08 This comprehensive account of arid land ecosystems will be of importance to university teachers and professional ecologists throughout the world

Nomadic Desert Birds W. Richard J. Dean, 2013-06-29 My interest in the behaviour and movements of birds of arid and semi arid ecosystems began when my wife Sue Milton and I were Roy Siegfried Director at that time of the Percy approached by Prof FitzPatrick Institute of African Ornithology to set up a project to investigate granivory in the South African Karoo Sue and I spent some time finding a suitable study site setting up accommodations and an automatic weather station at Tierberg in the southern Karoo near the village of Prince Albert and planning projects Among our first projects was a transect where we noted plant phenology measured seed densities on the soil surface counted birds observed ant activity measured soil surface temperatures and collected whatever climate data we could at 40 sites along a 200 km oval route Along the way we became interested in the marked presence and absence of birds at certain sites abundant birds one day and very few birds at the same site a month later Subsequent counts along fixed transects through shrublands confirmed that a number of bird species were highly nomadic over short and long distances locally and regionally leading to speculation on how widespread these movements were in the arid ecosystems of the world

Desert Truffles Varda Kagan-Zur, Nurit Roth-Bejerano, Yaron Sitrit, Asunción Morte, 2013-10-30 Desert truffles are found in every known desert irrespective of the habitat cool or hot loamy or acidic sandy or heavy soil the only common condition seems to be a limited supply of water In contrast to true truffles desert truffles have evolved over time in different families mainly within the order Pezizales While in some arid areas desert truffles have been traditionally used as food in most regions interest has only recently been increasing and truffles are now treasured for their nutritional value as an income source and for research This volume gives a comprehensive overview of the

phylogeny biology mycorrhizal association and distribution of desert truffles their use biochemical and medicinal properties as well as their domestication and cultivation *The Ecology of Desert Communities* Gary A. Polis, 2023-01-10 Provides interesting and thought provoking reading and is highly recommended to anyone interested in desert ecosystems or community ecology The book should serve as an inspiration to many for future research Journal of Biogeography This book is not just about deserts it is an update of the contributions that research in desert systems is making to community ecology This book will provide a useful reference for desert ecologists as well as indicate critical directions where progress needs to be made Ecology This important book fills a significant gap in previous syntheses by presenting a detailed series of reviews of current understanding of community patterns and structure in desert environments Each chapter is thorough and well written and closes with a discussion of suggested future research These ideas will do much to focus interest on the importance of desert systems in understanding community Thus this book has interest well beyond desert ecologists alone BioScience Valuable reading and reference for ecology students teachers and researchers Quarterly Review of Biology

Desert Meteorology Thomas T. Warner, 2009-01-18 Aridity prevails over more than one third of the land area of the Earth and over a significant fraction of the oceans as well Yet to date there has been no comprehensive reference volume or textbook dealing with the weather processes that define the character of desert areas Desert Meteorology fills this gap by treating all aspects of desert weather such as large scale and local scale causes of aridity precipitation characteristics in deserts dust storms floods climate change in deserts precipitation processes desertification land surface physics of deserts numerical modelling of desert atmospheres and the effect of desert weather on humans A summary is provided of the climates and surface properties of the desert areas of the world The book is written with the assumption that the reader has only a basic knowledge of meteorology physics and calculus making it useful to those in a wide range of disciplines It includes review questions and problems for the student This comprehensive volume will satisfy all who need to know more about the weather and climate of arid lands It will appeal especially to advanced students and researchers in environmental science meteorology physical geography hydrology and engineering *Geomorphology of Desert Environments* A. D. Abrahams, A. Parsons, 2013-04-17 Over the last twenty years there has been a major expansion of knowledge in the field of landforms and landforming processes of deserts This advanced level book provides a benchmark for the current state of science and is written by an international team of authors who are acknowledged experts in their fields **North American Deserts** Sean P Graham, 2025 **Ecophysiology of Small Desert Mammals** Allan A. Degen, 2012-12-06 Since small mammals have a large surface to mass ratio one would expect them to quickly dehydrate and perish at high environmental temperatures Nonetheless a large number of small mammal species inhabit deserts This fascinating phenomenon is investigated by Prof A Allan Degen in his book The majority of small desert mammals are rodents but shrews of several grams and small foxes of 1 kg are also present Their survival is due mainly to behavioural adaptations and habitat selection

however physiological adaptations also contribute to the success Interestingly many small mammals that live in different deserts of the world show similarities in their adaptive traits although they have different taxonomic affinities A Desert Calling Michael A. Mares,2009-07-01 For most of us the word desert conjures up images of barren wasteland vast dry stretches inimical to life But for a great array of creatures the desert is a haven and a home Travel with Mares into the deserts of Argentina Iran Egypt and the American Southwest to encounter a rich and memorable variety of small tenacious animals **Chuckwalla Land** David Rains Wallace,2011-04-02 Wallace weaves science and mythology into a clear and entertaining story about the origin of California s deserts that invites the reader into a world of ancient mystery and modern revelation This book will appeal to anyone who cherishes arid lands and their natural history Bruce M Pavlik author of The California Deserts An Ecological Rediscovery David Rains Wallace explores the origins of the California desert with the endless curiosity of a naturalist with the wit and wordplay of a fine essayist and with the attention to detail of a lifelong scholar He burrows toward the solution of the desert s riddle by following two centuries of science in doing so Wallace writes a unique account of both the ecology of the Desert Southwest and the biologists who have devoted their lives to untangling its evolutionary history Stephen Trimble author of The Sagebrush Ocean A Natural History of the Great Basin David Rains Wallace never fails to truly enter the world of which he writes Here he tackles fiery heat ancient lava flows spiny plants and scuttling reptiles all in the service of asking some difficult how s and why s I learned a lot about places and critters I thought I knew well from this marvelous book Harry Greene Cornell professor of ecology and evolutionary biology author of Snakes the Evolution of Mystery in Nature **Ecology of Desert Systems** Walter G. Whitford,Benjamin D. Duval,2019-08-20 Nearly one third of the land area on our planet is classified as arid or desert Therefore an understanding of the dynamics of such arid ecosystems is essential to managing those systems in a way that sustains human populations This second edition of Ecology of Desert Systems provides a clear extensive guide to the complex interactions involved in these areas This book details the relationships between abiotic and biotic environments of desert ecosystems demonstrating to readers how these interactions drive ecological processes These include plant growth and animal reproductive success the spatial and temporal distribution of vegetation and animals and the influence of invasive species and anthropogenic climate change specific to arid systems Drawing on the extensive experience of its expert authors Ecology of Desert Systems is an essential guide to arid ecosystems for students looking for an overview of the field researchers keen to learn how their work fits in to the overall picture and those involved with environmental management of desert areas Highlights the complexity of global desert systems in a clear concise way Reviews the most current issues facing researchers in the field including the spread of invasive species due to globalized trade the impact of industrial mining and climate change Updated and extended to include information on invasive species management industrial mining impacts and the current and future role of climate change in desert systems
