Hartley, 2014-05-23 This volume contains a selection of the best papers from the Computer Assisted Learning 1993 symposium The theme of the proceedings CAL into the mainstream reflects the growing realization over the past few years that technology has a central role to play in supporting the changes which are taking place in educational provision and practice

Learning to Think Paul Light, Sue Sheldon, Martin Woodhead, 2014-04-23 The popular image derived from Piaget of the child as a solitary thinker struggling to construct a personal understanding of the mathematical and logical properties of the physical world has given way in recent years to a view of children's learning and thinking as embedded in social relationships This shift is here reflected in a set of readings which show the child being initiated into shared cultural understandings through close relationships with parents and teachers as well as siblings and peers

Learning to Think Martin Woodhead, Paul Light, 1991 A study in child psychology which presents a series of essays that examine how a child is initiated into shared cultural understanding through close relationships with parents and teachers as well as siblings and peers

Teaching Mathematics Michelle Selinger, 2013-10-31 In this reader maths teachers in the early years of their careers will find a concise yet comprehensive guide to developments in mathematics teaching in secondary schools and the controversies which currently surround it After a brief summary of the historical context a series of short articles provides a range of perspectives on various issues of current debate which will help new teachers in the development of their own teaching styles These include the impact of computers and calculators in maths teaching the various arguments about the use of published schemes and for more investigational approaches to the curriculum and the way in which social and cultural factors can be approached through the teaching of various topics in mathematics The final section looks at how teachers might continue their professional development through action research in their own classrooms

Engaging Primary Children in Mathematics Margaret

Sangster, 2016-02-25 Effective teaching is a combination of technical skills and knowledge but good teachers also need to understand how children learn and how they can most effectively be taught *Engaging Primary Children in Mathematics* explores the various strategies for engaging children in mathematical learning in the light of theory and practice and is designed to talk straight to the teacher student about their classroom approach to the teaching of primary mathematics The importance of creating a learning environment in which children can learn to be young mathematicians where they can explore create and solve problems cannot be underestimated Margaret Sangster explores how students and practitioners can develop their practice by reviewing a range of approaches to the teaching of mathematics and the development of those young mathematicians with examples of thought provoking activities to inform their own practice *British Education Index*, 1986 The Routledge Compendium of Primary Education R.J. Campbell, 2018-02-06 First published in 1988 A guide and reference source to theory practice and policy in primary education Mathematical Enculturation Alan Bishop, 2012-12-06 Mathematics is in the unenviable position of being simultaneously one of the most important school subjects for today's children to study and one of the least well understood Its reputation is awe inspiring Everybody knows how important it is and everybody knows that they have to study it But few people feel comfortable with it so much so that it is socially quite acceptable in many countries to confess ignorance about it to brag about one's incompetence at doing it and even to claim that one is mathophobic So are teachers around the world being apparently legal sadists by inflicting mental pain on their charges Or is it that their pupils are all masochists enjoying the thrill of self inflicted mental torture More seriously do we really know what the reasons are for the mathematical activity which goes on in schools Do we really have confidence in our criteria for judging what's important and what isn't Do we really know what we should be doing These basic questions become even more important when considered in the context of two growing problem areas The first is a concern felt in many countries about the direction which mathematics education should take in the face of the increasing presence of computers and calculator related technology in society *The Philosophy of Mathematics Education* Paul Ernest, 2002-11-01 Although many agree that all teaching rests on a theory of knowledge there has been no in depth exploration of the implications of the philosophy of mathematics for education This is Paul Ernest's aim Building on the work of Lakatos and Wittgenstein it challenges the prevalent notion that mathematical knowledge is certain absolute and neutral and offers instead an account of mathematics as a social construction This has profound educational implications for social issues including gender race and multiculturalism for pedagogy including investigations and problem solving and challenges hierarchical views of mathematics learning and ability Beyond this the book offers a well grounded model of five educational ideologies each with its own epistemology values aims and social group of adherents An analysis of the impact of these groups on the National Curriculum results in a powerful critique revealing the questionable assumptions values and interests upon which it rests The book finishes on an optimistic note arguing that pedagogy left unspecified by the National

Curriculum is the way to achieve the radical aims of educating confident problem posers and solvers who are able to critically evaluate the social uses of mathematics Curricular Needs of Slow Learners W. K. Brennan, 2018-09-03 First published in 1979 This report discusses the existing practices of over 500 primary secondary and special schools with their special needs pupils The study outlines the variety of provisions facilities and equipment in the schools and the extent of use with slow learners It maps out the curricular activities in many organisational contexts and across all subject areas and discusses comparative strengths and weaknesses It relates the findings to the problems of improving the quality of education offered to slow learning pupils suggesting areas where improvement is needed and outlining possible new approaches

The Australian Mathematics Teacher ,1983 **Three Dimensions** A. Treffers, 2012-12-06 In Dutch WISKOBAS stands for a particular kind of mathematics in the elementary school ages 6 12 In tum Wiskobas was one of the depart ments in the IOWO the Institute for the Development of Mathematics Education This institute was concerned with the development of material for mathematics education as well as the related research on the possibility of change from the then existing arithmetic instruction to the future mathematics education The present publication Three Dimensions has three aims to give a picture of the goals Wiskobas set for future mathematics education at the same time to show how such goals can be described and to show the theoretical framework of the Wiskobas curriculum The problem at hand is not at all simple What is more Wiskobas ideas about mathematics education cannot literally be translated into strings of words So how can we face the accusation that our objectives are unattain able and the goal itself irrational In order to avoid this vagueness as much as possible and for the sake of clarity this book makes continuous use of illustrations of mathematics education In these examples both the subject matter and the methods of description of the goals are illustrated as explicitly as possible while at the same time creating the opportunity to read between the lines The reader is urged to follow carefully the mathe matical material at the start of each chapter This advice applies both to the more general education oriented and to the more mathematical didactical reader Teaching STEM in the Secondary School Frank Banks, David Barlex, 2020-12-29 This book looks at the purpose and pedagogy of STEM teaching and explores the ways in which STEM subjects can interact in the curriculum to enhance student understanding achievement and motivation By reaching outside their own classroom teachers can collaborate across STEM subjects to enrich learning and help students relate school science technology and maths to the wider world Packed with ideas and practical details for teachers of STEM subjects the new revised edition of this book considers what the STEM subjects contribute separately to the curriculum and how they relate to each other in the wider education of secondary school students describes and evaluates different curriculum models for STEM suggests ways in which a critical approach to the pedagogy of the classroom laboratory and workshop can support and encourage all pupils to engage fully in STEM addresses the practicalities of introducing organising and sustaining STEM related activities in the secondary school looks to ways schools can manage and sustain STEM approaches in the long term This new revised edition

is essential reading for trainee and practising teachers those engaged in further professional development and all who wish to make the learning of science technology engineering and mathematics an interesting motivating and exciting experience for their students
