Mathematics of Oil Recovery Dominique Guerillot, D. Guérillot, Olivier Guillon, 1990-12      *Numerical Simulation in Oil Recovery* Mary Fanett Wheeler, 1988 The papers of this book are based on a Symposium on Numerical Simulation in Oil Recovery held at the Institute for Mathematics and its Applications The major research emphasis is on the modeling of fractures heterogeneities viscous fingering and diffusion dispersion effects in the flow in porous media This volume contains seventeen comprehensive papers on the latest developments in this exciting subject Its diverse presentation brings together the various disciplines of applied mathematics chemical engineering physics and hydrology      **Flow Control** Max D. Gunzburger, 2012-12-06 The articles in this volume cover recent work in the area of flow control from the point of view of both engineers and mathematicians These writings are especially timely as they coincide with the emergence of the role of mathematics and systematic engineering analysis in flow control and optimization Recently this role has significantly expanded to the point where now sophisticated mathematical and computational tools are being increasingly applied to the control and optimization of fluid flows These articles document some important work that has gone on to influence the practical everyday design of flows moreover they represent the state of the art in the formulation analysis and computation of flow control problems This volume will be of interest to both applied mathematicians and to engineers      *Computation and Applied Mathematics*, 2002      *Numerical Treatment of Multiphase Flows in Porous Media* Zhangxin Chen, Richard E. Ewing, Zhong-Ci Shi, 2008-01-11 The need to predict understand and optimize complex physical and chemical processes occurring in and around the earth such as groundwater contamination oil reservoir production discovering new oil reserves and ocean hydrodynamics has been increasingly recognized Despite their seemingly disparate natures these geoscience problems have many common mathematical and computational characteristics The techniques used to describe and study them are applicable across a broad range of areas The study of the above problems through physical experiments mathematical theory and computational techniques requires interdisciplinary collaboration between engineers mathematicians computational scientists and other researchers working in industry government laboratories and universities By bringing together such researchers meaningful progress can be made in predicting understanding and optimizing physical and chemical processes The International Workshop on Fluid Flow and Transport in Porous Media was successfully held in Beijing China August 2-6 1999 The aim of this workshop was to bring together applied mathematicians computational scientists and engineers working actively in the mathematical and numerical treatment of fluid flow and transport in porous media A broad range of researchers presented papers and discussed both problems and current state of the art techniques      Modeling Transport Phenomena in Porous Media with Applications Malay K. Das, Partha P. Mukherjee, K. Muralidhar, 2017-11-21 This book is an ensemble of six major chapters an introduction and a closure on modeling transport phenomena in porous media with applications Two of the six chapters explain the underlying theories whereas the rest focus on new applications Porous

media transport is essentially a multi scale process Accordingly the related theory described in the second and third chapters covers both continuum and meso scale phenomena Examining the continuum formulation imparts rigor to the empirical porous media models while the mesoscopic model focuses on the physical processes within the pores Porous media models are discussed in the context of a few important engineering applications These include biomedical problems gas hydrate reservoirs regenerators and fuel cells The discussion reveals the strengths and weaknesses of existing models as well as future research directions

*Fluid Flow and Transport in Porous Media, Mathematical and Numerical Treatment* Zhangxin Chen, Richard E. Ewing, 2002 The June 2001 conference brought together mathematicians computational scientists and engineers working on the mathematical and numerical treatment of fluid flow and transport in porous media This collection of 43 papers from that conference reports on recent advances in network flow modeling parallel computation optimization upscaling uncertainty reduction media characterization and chemically reactive phenomena Topics include modeling horizontal wells using hybrid grids in reservoir simulation a high order Lagrangian scheme for flow through unsaturated porous media and a streamline front tracking method for two and three phase flow No index Annotation copyrighted by Book News Inc Portland OR

**PREFACE**

Advances in resource recovery and confinement remediation of environmental hazards requires a coordinated interdisciplinary effort involving mathematicians scientists and engineers The intent of this collection of papers is to summarize recent theoretical computational and experimental advances in the theory of phenomena in porous media with the intent to identify similarities and differences concerning applications related to both resource recovery and confinement and remediation of environmental hazards

Mathematical Aspects of Scientific Software J.R. Rice, 2012-12-06 Since scientific software is the fuel that drives today's computers to solve a vast range of problems huge efforts are being put into the development of new software systems and algorithms for scientific problem solving This book explores how scientific software impacts the structure of mathematics how it creates new subfields and how new classes of mathematical problems arise The focus is on five topics where the impact is currently being felt and where important new challenges exist namely the new subfield of parallel and geometric computations the emergence of symbolic computation systems into general use the potential emergence of new high level mathematical systems and the crucial question of how to measure the performance of mathematical problem solving tools

*Mathematics in Industrial Problems* Avner Friedman, 2012-12-06 This is the third volume in the series Mathematics in Industrial Problems The motivation for these volumes is to foster interaction between Industry and Mathematics at the grass roots that is at the level of specific problems These problems come from Industry they arise from models developed by the industrial scientists in ventures directed at the manufacture of new or improved products At the same time these problems have the potential for mathematical challenge and novelty To identify such problems I have visited industries and had discussions with their scientists Some of the scientists have subsequently presented their problems in the IMA seminar on Industrial Problems The book is based on questions raised in the seminar and subsequent discussions Each chapter is devoted to one of the talks and is self contained The chapters usually provide references to the mathematical literature and a list of open problems which are of interest to the industrial scientists For some problems partial solution is indicated briefly The last chapter of the book contains a short description of solutions to some of the problems raised in the second volume as well as references to papers in which such solutions have been published

**Computational Fluid Dynamics and Reacting Gas Flows** Bjorn Engquist, Mitchell Luskin, Andrew Majda, 2012-12-06 This IMA Volume in Mathematics and its Applications COMPUTATIONAL FLUID DYNAMICS AND REACTING GAS FLOWS is in part the proceedings of a workshop which was an integral part of the 1986-87 IMA program on SCIENTIFIC COMPUTATION We are grateful to the Scientific Committee Bjorn Engquist Chairman

Roland Glowinski Mitchell Luskin and Andrew Majda for planning and implementing an exciting and stimulating year long program We especially thank the Workshop Organizers Bjorn Engquist Mitchell Luskin and Andrew Majda for organizing a workshop which brought together many of the leading researchers in the area of computational fluid dynamics George R Sell Hans Weinberger

**PREFACE** Computational fluid dynamics has always been of central importance in scientific computing It is also a field which clearly displays the essential theme of interaction between mathematics physics and computer science Therefore it was natural for the first workshop of the 1986 87 program on scientific computing at the Institute for Mathematics and Its Applications to concentrate on computational fluid dynamics In the workshop more traditional fields were mixed with fields of emerging importance such as reacting gas flows and non Newtonian flows The workshop was marked by a high level of interaction and discussion among researchers representing varied schools of thought and countries

**Homogenization and Porous Media** Ulrich Hornung, 2012-12-06 This book offers a systematic rigorous treatment of upscaling procedures related to physical modeling for porous media on micro meso and macro scales including detailed studies of micro structure systems and computational results for dual porosity models Next Generation Environmental Models and Computational Methods George Delic, Mary Fanett Wheeler, 1997-01-01 Large scale changes are taking place in the way modelling is performed within the US EPA and a new generation of environmental models is currently under construction The US EPA is engaging in several modelling efforts in response to Congressional mandates such as the Clean Air Act and the Clean Water Act These mandates require the scientific modelling of the impact of pollutants on human health and the environment The complexity of scale in environmental models has increased by several orders of magnitude with a simultaneous demand for increased stability accuracy and efficiency in the computed model solution This book showcases numerical algorithms appropriate to the subject areas listed below and explores how new algorithmic methods would benefit the US EPA s environmental models and other environmental studies *Computer Aided Proofs in Analysis* Kenneth R. Meyer, Dieter S. Schmidt, 2012-12-06 This IMA Volume in Mathematics and its Applications COMPUTER AIDED PROOFS IN ANALYSIS is based on the proceedings of an IMA Participating Institutions PI Conference held at the University of Cincinnati in April 1989 Each year the 19 Participating Institutions select through a competitive process several conferences proposals from the PIs for partial funding This conference brought together leading figures in a number of fields who were interested in finding exact answers to problems in analysis through computer methods We thank Kenneth Meyer and Dieter Schmidt for organizing the meeting and editing the proceedings A vner Friedman Willard Miller Jr **PREFACE** Since the dawn of the computer revolution the vast majority of scientific compu tation has dealt with finding approximate solutions of equations However during this time there has been a small cadre seeking precise solutions of equations and rigorous proofs of mathematical results For example number theory and combina torics have a long history of computer assisted proofs such methods are now well established in these fields In analysis the use of computers to obtain exact results has been fragmented
