Numerical Recipes in Fortran 90: Volume 2, Volume 2 of Fortran Numerical Recipes William H. Press,1996-09-28 This book gives a detailed introduction to Fortran 90 and to parallel programming with all 350 routines from the second edition of Numerical Recipes Introduction to Parallel Algorithms C. Xavier,S. S. Iyengar,1998-08-05 Parallel algorithms Made Easy

The complexity of today's applications coupled with the widespread use of parallel computing has made the design and analysis of parallel algorithms topics of growing interest. This volume fills a need in the field for an introductory treatment of parallel algorithms appropriate even at the undergraduate level where no other textbooks on the subject exist. It features a systematic approach to the latest design techniques providing analysis and implementation details for each parallel algorithm described in the book. Introduction to Parallel Algorithms covers foundations of parallel computing, parallel algorithms for trees and graphs, parallel algorithms for sorting, searching and merging, and numerical algorithms. This remarkable book presents basic concepts in clear and simple terms, incorporates numerous examples to enhance students' understanding, shows how to develop parallel algorithms for all classical problems in computer science, mathematics, and engineering, employs extensive illustrations of new design techniques, discusses parallel algorithms in the context of the PRAM model, includes end-of-chapter exercises and detailed references on parallel computing. This book enables universities to offer parallel algorithm courses at the senior undergraduate level in computer science and engineering. It is also an invaluable text reference for graduate students, scientists, and engineers in computer science, mathematics, and engineering.

New Computing Techniques In Physics Research Iii - Proceedings Of The 3rd International Workshop On Software

Engineering, Ai And Expert Systems For High Energy And Nuclear Physics K H Becks, Denis Perret-gallix, 1994-02-04

No basic or applied physics research can be done nowadays without the support of computing systems ranging from cheap personal computers to large multi-user mainframes. Some research fields like high energy physics would not exist if computers had not been invented. Departing from the more conventional numerical applications, this series of workshops has been initiated to focus on Artificial Intelligence (AI) related developments such as symbolic manipulation for lengthy and involved algebraic computations, software engineering to assist groups of developers in the design, coding, and maintenance of large packages, expert systems to mimic human reasoning and strategy in the diagnosis of equipment or neural networks to implement a model of the brain to solve pattern recognition problems. These techniques developed some time ago by AI researchers are confronted by down-to-earth problems arising in high energy and nuclear physics. All this and more are covered in these proceedings.
