## **Nutritional Treatment Of Chronic Renal Failure:**

*Nutritional Treatment of Chronic Renal Failure* Sergio Giovannetti, 2012-12-06 Enormous progress has been made in the treatment of chronic renal failure over the last decades. Until the 1950s, chronic renal failure was considered to be an inexorably lethal condition. This is no longer the case. In addition, the disease severe uremic syndrome is now extremely rare if existent at all in industrialized countries. Physicians of my generation who saw patients hospitalized with hemorrhages, pericarditis, severe anemia, cardiac failure, malignant hypertension, pruritus, vomiting, generalized edema, and convulsions are particularly grateful for this progress. I will remember seeing such patients hospitalized in the last days or weeks of their lives and also remember the sense of impotence I suffered for the complete lack of efficient measures I had at my disposal to manage their condition. Nowadays, hemodialysis, peritoneal dialysis, and kidney transplantation allow patients with chronic renal failure to survive for very long periods of time in a satisfactory condition. Why then is there still a sense of dissatisfaction and why should we study dietary management? The drawbacks of dialysis and transplantation are the main reasons, but the certainty that dietary therapy is complementary to dialysis and even better than dialysis in certain conditions is also very important. *Nutritional Management of Renal Disease* Joel D. Kopple, Shaul G. Massry, Kamyar

Kalantar-Zadeh, 2012-12-31 This translational text offers in depth reviews of the metabolic and nutritional disorders that are prevalent in patients with renal disease. Chapter topics address the growing epidemic of obesity and metabolic syndrome. Each chapter integrates basic and clinical approaches from cell biology and genetics to diagnosis, patient management, and treatment. Chapters in sections 4-7 include new illustrative case reports and all chapters emphasize key concepts with chapter ending summaries. New features also include the latest National Kidney Foundation Clinical Practice Guidelines on Nutrition in Chronic Renal Failure, the most recent scientific discoveries, and the latest techniques for assessing nutritional status in renal disease and literature reviews on patients who receive continuous veno-venous hemofiltration with or without dialysis. Provides a common language for nephrologists, nutritionists, endocrinologists, and other interested physicians to discuss the underlying research and translation of best practices for the nutritional management and prevention of renal disease. Saves clinicians and researchers time in quickly accessing the very latest details on nutritional practice as opposed to searching through thousands of journal articles. Correct diagnosis and therefore correct treatment of renal metabolic and nutritional disorders depends on a strong understanding of the molecular basis for the disease. Both nephrologists and nutritionists will benefit. Nephrologists and nutritionists will gain insight into which treatments, medications, and diets to use based on the history, progression, and genetic make up of a patient. Case Reports will offer an added resource for fellows, nutritionists, and dieticians who need a refresher course.
