It presents some very important tools and methodologies that can be used to address chemical exposure and public health risk management problems in a consistent, efficient, and cost effective manner. On the whole, the book represents a collection and synthesis of the principal elements of the risk assessment process that may be used to more effectively address issues pertaining to human exposures to chemicals found in modern societies. This also includes an elaboration of pertinent risk assessment concepts and techniques, methodologies for performing human health risk assessments. Written for both the novice and the experienced, the subject matter of this book is an attempt at offering a simplified and systematic presentation of public health risk assessment methods and application tools. All these facilitated by a layout that will carefully navigate the user through the major processes involved. A number of illustrative example problems are interspersed throughout the book in order to help present the book in an easy to follow pragmatic manner.

**Cities and Their Vital Systems** Advisory Committee on Technology and Society, 1989 Cities and Their Vital Systems asks basic questions about the longevity, utility, and nature of urban infrastructures, analyzes how they grow, interact, and change, and asks how, when, and at what cost they should be replaced. Among the topics discussed are problems arising from increasing air travel and airport congestion, the adequacy of water supplies and waste treatment, the impact of new technologies on construction, urban real estate values, and the field of telematics, the combination of computers and telecommunications that makes money machines and national newspapers possible.
