Oceans And Environmental Security Shared U S Russian Perspectives:

The Oceans and Environmental Security James Broadus, Raphael V. Vartanov, 1994-11-01 The concept of environmental security drawing on the widely understood notion of international strategic interdependence in facing for example threats of nuclear war or economic collapse is gaining currency as a way of thinking about international environmental management In 1989 the Institute for World Economy and International Relations of the Russian Academy of Sciences and the Marine Policy Center of Woods Hole Oceanographic Institution instituted a joint project to examine environmental security as it applies to the world's oceans The Oceans and Environmental Security is a unified expression of their findings The oceans as global commons are of central importance to issues of international environmental security Critical problems are those that are likely to destabilize normal relations between nations and provoke international countermeasures As such the book focuses on seven specific concerns land based marine pollution North Pacific fisheries depletion hazardous materials transport nuclear contamination the Arctic Ocean the Southern Ocean and Antarctica the Law of the Sea

Environmental Security in the Arctic Ocean Paul Berkman, 2012-09-10 The North Pole is being transformed from a sea ice cap to a seasonally ice free sea within the next few decades This fundamental shift in the boundary conditions of the Arctic Ocean will create a new natural system with different dynamics than anything previously experienced by humans in the region With the diminishing ice cover interests are awakening globally to take advantage of extensive energy shipping fishing and tourism prospects in the Arctic Ocean A range of states including the major Arctic powers are increasingly asserting their sovereignty seawards National security policies are being declared and nuclear capable states are adjusting their strategic deployments in the Arctic Ocean There are forums for international cooperation in the Arctic most notably the Arctic Council but peace in the Arctic Ocean has yet to be explicitly established as a common interest because of the long standing military presence Risks of political economic and cultural instabilities are inherent consequences This volume proposes environmental security as providing a holistic framework to assess these security risks and then identify the appropriate adaptation and mitigation responses Only after shared risk assessment and understanding of the appropriate responses will there be sufficient clarity about the governance paths to pursue within the international legal framework of the law of the sea

Environmental Security in the Arctic Ocean Paul Arthur Berkman, Alexander N. Vylegzhanin, 2012-11-29 This seminal book results from a NATO Advanced Research Workshop at the University of Cambridge with Russian co directorship enabling the first formal dialogue between NATO and Russia about security issues in the Arctic Ocean Involving interdisciplinary participation with experts from 17 nations including all of the Arctic states this workshop itself reflects progress in Arctic cooperation and collaboration Interests now are awakening globally to take advantage of extensive energy shipping fishing and tourism opportunities in the Arctic Ocean as it is being transformed from a permanent sea ice cap to a seasonally ice free sea This environmental state change is introducing inherent risks of political economic and cultural instabilities that are centralized

among the Arctic states and indigenous peoples with repercussions globally Responding with urgency environmental security is presented as an integrated approach for assessing and responding to the risks as well as the opportunities generated by an environmental state change In this book diverse perspectives on environmental security in the Arctic Ocean are shared in chapters from high level diplomats parliamentarians and government officials of Arctic and non Arctic states leaders of Arctic indigenous peoples organizations international law advisors from Arctic states as well as the United Nations directors of inter governmental organizations and non governmental organizations managers of multi national corporations political scientists historians and economists along with Earth system scientists and oceanographers Building on the common arctic issues of sustainable development and environmental protection established by the Arctic Council environmental security offers an holistic approach to assess opportunities and risks as well as develop infrastructure responses with law of the sea as the key international legal framework to promote the peaceful uses of the Arctic Ocean With vision for future generations environmental security is a path to balance national interests and common interests in the Arctic Ocean for the lasting benefit of all

The Oceans and Environmental Security James Broadus, Rafaël' Vramovich Vartanov, 1994-11 Human ecology is an emerging discipline that studies the interrelationships between humans and their environment drawing on insights from biology sociology anthropology geography engineering architecture landscape architecture planning and conservation While a vast multidisciplinary literature underscores this approach until now no one has synthesized the work of diverse sometimes divergent scholars to illustrate how human interactions can be understood as ecological relationships using hierarchy as an organizing device In Human Ecology noted landscape planner Frederick Steiner builds on the work of leading thinkers including Christopher Alexander William Cronon Clifford Geertz James Lovelock Eugene Odum Paul Shepard Anne Whiston Spirn E O Wilson Gerald Young and many others to present a historical and analytical examination of how humans interact with each other as well as with other organisms and their surroundings The first two chapters summarize the development of this new ecology and the theory of human ecology The remainder of the book provides an accessible introduction to the major elements of human ecological theory including language culture and technology structure function and change edges and boundaries interaction integration and institution diversity and adaptation The chapters are organized hierarchically from the smallest scale to the largest with each chapter addressing a specific level as an ecosystem The final chapter probes some of the ethical implications of this new field Human Ecology brings together for the first time scholarship from the social and natural sciences as well as the environmental design arts to offer an overview of the field of human ecology and to show how the field may help us to envision our futures While the approach is largely theoretical it has broad policy and practical implications and represents an important new work for anyone concerned with interactions between humans and the environment

National Security and International Environmental Cooperation in the Arctic — the Case of the Northern Sea Route Willy Østreng, 2012-12-06 The basic objective of this report is to

place the debate about the future of the Northern Sea Route into the larger picture of Arctic politics and the emerging agenda of the Arctic as a developing region in international society National security and international environmental cooperation are the objects of study employed both separately and in various conceptual combinations to realize this purpose To help me in this I was privileged to draw on the profound expertise of my highly esteemed co authors Professor Franklyn Griffiths at the University of Toronto and Senior Researchers at IMEMO in Moscow Raphael Vartanov Alexei Roginko and Alexander Kolossov To their cooperative spirit friendship and solid contributions to this report am deeply indebted The report is the result of multiple contributions both in terms of substance and funding extending far beyond the inputs of the team of authors The professional input and thorough work behind the scene done by Liv Astrid Sverdrup Researcher at FNI at an early stage of the project has been invaluable Senior Consultant Kjell Moe at the Norwegian Polar Institute also provided valuable comments and improvements to the biological parts of the Introductory chapter whilst Senior Consultant Ann Skarstad at FNI worked wonders with the language for those of us not having English as our mother tongue Claes Lykke Ragner Deputy head of the NSROP secretariat and Dr Environmental Change and Security Project Report ,1998

Shakespeare's Ocean Daniel Brayton, 2012 Study of the sea both in terms of human interaction with it and its literary representation has been largely ignored by ecocritics In Shakespeare s Ocean Dan Brayton foregrounds the maritime dimension of a writer whose plays and poems have had an enormous impact on literary notions of nature and in so doing plots a new course for ecocritical scholarship Shakespeare lived during a time of great expansion of geographical knowledge The world in which he imagined his plays was newly understood to be a sphere covered with water In vital readings of works ranging from The Comedy of Errors to the valedictory The Tempest Brayton demonstrates Shakespeare s remarkable conceptual mastery of the early modern maritime world and reveals a powerful benthic imagination at work

The Oceans in the Nuclear Age David D. Caron, Harry N. Scheiber, 2014-07-17 The advent of the nuclear age in 1945 fundamentally altered the course of human events The oceans are not the focus of the nuclear age but the affairs of the oceans are deeply woven into the history of that age Knowledge of what the nuclear age has meant for the oceans however is highly fragmented and there exists a surprising gap in research on the impact of the nuclear age on the oceans and on ocean law and policy Ranging from dumped wastes to transportation to security this study frames the complex multidimensional set of relationships between the oceans and the nuclear age and illuminates patterns of impact and response in ocean law This timely expanded edition includes a new chapter by Lt Todd Hutchins USN on Nuclear Risks in Coastal Areas Legal and Regulatory Responses It provides a full discussion of the 2011 coastal Fukushima Nuclear Power Plant disaster together with analysis more generally of the challenges to the environment and to the legal order globally that are posed by coastal siting of nuclear power plants

Research Handbook on International Environmental Law Malgosia Fitzmaurice, David M. Ong, Panos Merkouris, 2010 an impressive volume and the editors have put together a high quality collection Research Handbook on International Environmental Law ought to be an invaluable reference source for both teachers and students of international environmental law in the years to come Web Journal of Current Legal Issues This wide ranging and comprehensive Handbook examines recent developments in international environmental law IEL and the crossover effects of this expansion on other areas of international law such as trade law and the law of the sea The expert contributors offer analyses of foundational issues in IEL such as responsibility for environmental damage sustainable development and the precautionary principle alongside studies in topical subject areas including marine protection and the law of international watercourses This Research Handbook offers an in depth analysis of

IEL both as a field of law in its own right and as part of the wider system of international law. It gives a comprehensive view of IEL in all its forms and complexity. With thorough examination of specific environmental regimes and compliance mechanisms, this Handbook will be an indispensable resource for legal scholars, students and practitioners alike. *A Guide to International Disarmament Law* Stuart Casey-Maslen, Tobias Vestner, 2019-05-24. Disarmament is integral to the safeguarding and promotion of security, development and human rights. Hundreds of millions of dollars are spent each year on disarmament operations, yet no comprehensive guide exists to explain clearly the international rules governing disarmament. This book seeks to fill that gap. It describes the international legal rules that govern disarmament and the operational, political and technical considerations that govern their implementation. This book aims to support compliance, implementation and further development of international disarmament law. Traditionally, disarmament focused on weapons of mass destruction. This remains a critically important area of work. In recent decades, the scope of disarmament has broadened to encompass also conventional weapons, including through the adoption of rules and regulations to govern arms transfers and measures to eliminate specific munitions from stockpiles and to destroy explosive remnants of war. There have also been four generations of programmes to address small arms and light weapons at national or sub-national level through disarmament, demobilisation and reintegration (DDR) programmes during and following the end of armed conflict. While an internationally accepted definition of disarmament does not yet exist, it is widely agreed that disarmament encompasses or interrelates with prohibitions and restrictions on the development, production, stockpiling, testing and transfer of weapons and on their destruction. In addition to clarifying these elements, chapters of this guide will also consider the relationship between disarmament and the law of armed conflict and with the United Nations Security Council, human security, public health and non-state actors.

Arms Control and the Environment Lakshman Guruswamy, Suzette Grillo, 2021-10-01. Arms and the Environment is the first book to systematically address the conceptual gap between international arms control norms and informed awareness of environmental perils. It presents searching analyses and solutions from active professionals in a variety of related fields, including international peacekeeping and defense procurement, as well as representatives of concerned non-governmental organizations and distinguished academics in the natural sciences, law and political science. Published under the Transnational Publishers imprint.

Naval Strategy in Northeast Asia Duk-Ki Kim, 2012-10-12. Over the past decade, Northeast Asia has been dominated by quite significant strategic change, which is ongoing and brings with it many uncertainties. Naval capabilities in Northwest Asia are instrumental in promoting maritime security interests, helping to build a stable security environment through active participation in regional naval co-operation. This landmark book explores the region's maritime peace and stability and examines in depth the strategic, military and apolitical issues that underpin any effort to develop maritime co-operation.

Environmental Law of Armed Conflict Nada Al-Duaij, 2021-10-25. This timely study examines how the environmental impact of modern warfare violates fundamental principles of international environmental

and humanitarian laws and why these consideration need to be included in rules of armed conflict If direct attacks on innocent civilians are universally recognized as unacceptable then environ mental devastation of their habitat by acts of war must also be recognized as an unacceptable consequence of armed conflict The author presents the case that the international community understand its responsibility to curb environ mental consequences of modern weaponry and incorporate environmental concerns into the conventions regulating armed conflict Published under the Transnational Publishers imprint
