Popular History Of American Inventi 2vol:

A Popular History of American Invention Waldemar Kaempffert, 1975 **History of American Industrial Science** Courtney Robert Hall, 1972 **A Biographical Dictionary of People in Engineering** Carl W. Hall, 2008

Advancements in the field of engineering that have led to major inventions and discoveries are built on the foundations of predecessors and their work. In many cases small steps are taken by a variety of researchers leading ultimately to a very momentous discovery. A Biographical Dictionary of People in Engineering Literature lists the work and contributions of thousands of people from many countries representing numerous fields of endeavor over many centuries. The ancient cultures of people in China, Arabia, India, and Japan, the renaissance culture of the Greeks, Egyptians, Romans, and in addition the European cultures of the Russians, Germans, French, and others all have contributed to what is now called engineering. The terms engineer and engineering are rather recent but former builders, architects, instrument makers, inventors, discoverers, and shop workers were part of the process. This work contains the necrologies, names, dates, and a brief biography up to the year 2000 of people who are found in engineering and invention literature. The names were culled from histories, biographies, literature, and handbooks, particularly from those reference titles including words such as distinguished, honored, leaders, outstanding, pioneers, prominent, recognized, renowned, and respected. The necrologies are necessarily abbreviated with the major employers and dates of employment and specialties listed, and references to the sources of information. This book is a must for reference collections and those in the media who cover the field of engineering advancement.

In revising Beckmann's celebrated Work we have endeavoured to improve it principally by altering such names, characters, descriptions

and opinions as have become obsolete or are now known to be erroneous and by such additions as seemed necessary to bring the accounts of the subjects treated of to the present state of knowledge In some cases these additions may appear to diverge from the declared object of the work but in this we have only followed the example of Beckmann himself who frequently deviates from a strict historical path and we think advantageously for the purpose of introducing curious instructive or amusing information In most cases where the subject under consideration is a process of manufacture we have given a brief outline of its practice or theory unless this had previously been done by the author The translation also has been carefully compared with the German but in only a very few cases could we detect errors which rendered the passages contradictory or unintelligible on the whole it is extremely well executed and too much praise cannot be given to Johnston for the judicious manner in which he has embodied in one article detached essays on the same subject which Beckmann^{viii} published at different periods as he acquired fresh information
