Population The Dynamics Of Demographic Change:

Population Dynamics Ralph Thomlinson, 1976 Population Charles B. Nam, Susan O. Gustavus, Susan Gustavus Demography: Analysis and Synthesis, Four Volume Set Graziella Caselli, Jacques Vallin, Guillaume Wunsch, 2006-01-03 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized. The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks Demography Analysis and Synthesis offers a long overdue thorough treatment of the field Choosing the analytical method that fits the data and the situation requires insights that the authors and editors of Demography Analysis and Synthesis have explored and developed This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic social political and cultural environments Limiting themselves to human populations only the authors and editors cover subjects that range from the core building blocks of population change fertility mortality and migration to the consequences of demographic changes in the biological and health fields population theories and doctrines observation systems and the teaching of demography The international perspectives brought to these subjects is vital for those who want an unbiased rounded overview of these complex multifaceted subjects Topics to be covered Population Dynamics and the Relationship Between Population Growth and Structure The Determinants of Fertility The Determinants of Mortality The Determinants of Migration Historical and Geographical Determinants of Population The Effects of Population on Health Economics Culture and the Environment Population Policies Data Collection Methods and Teaching about Population Studies All chapters share a common format Each chapter features several cross references to other chapters Tables charts and other non text features are widespread Each chapter contains at least 30 bibliographic citations Population Dynamics and Projection Methods John Stillwell, Martin Clarke, 2011-02-15 Although the human population growth rate of the world has been declining since peaking in the early 1960s the populations of individual countries are changing at different rates Population dynamics at national level are partly determined by levels of fertility and mortality but the impact of international migration is playing an increasingly important role Moreover internal migration plays a major part in population change at the sub national level This fourth volume in the series Understanding Population Trends and Processes is a celebration of the work of Professor Philip Rees It contains chapters by contributors who have collaborated with Phil Rees on research or consultancy projects or as postgraduate students Several chapters demonstrate the technical nature of population projection modelling and simulation methods while others illustrate issues relating to data availability and estimation This book demonstrates the

application of theoretical and modelling methods and addresses key issues relating to contemporary demographic patterns **Demographic Change in Uruguay** Rafael Rofman, Verónica Amarante, Ignacio Apella, 2016-06-10 The and trends population of Uruguay is undergoing a slow but sustained aging process driven by the demographic transition that started early in the twentieth century While this reflects significant improvements in mortality and fertility trends it also creates important challenges for the fiscal sustainability of some social policies and the economic trends in the medium and long term Uruguay is currently going through the demographic bond stage of this process as the proportion of the population aged between 15 and 65 years old is peaking This temporary situation creates the possibility of increasing the endowment of capital and labor force and entering a path of sustained economic growth For this to happen it is necessary to generate institutional financial and fiscal conditions that promote larger savings and investment to increase the productivity of the economy and sustain per capita GDP growth This book studies the opportunities and challenges that the demographic transition poses for Uruquay s economy Once the demographic bond has passed population aging will have a significant impact on fiscal accounts especially in social protection expenditures This represent a serious policy challenge demanding reforms to adapt the institutions and systems to a new demographic context. The main challenge for Uruguay in the next few decades will be to maintain a solid economic growth path in the context of a diminishing working age population This will require that labor force participation rates increase particularly among women and older citizen but also that those in the labor market increase their productivity This will be achieved only through sustained growth of capital per worker ratio and the incorporation of innovations and technological developments that facilitate increased production of goods and services for the entire population Impact of Demographic Changes on Inflation and the Macroeconomy Mr.Jong-Won Yoon, Mr. Jinill Kim, Jungjin Lee, 2014-11-24 The ongoing demographic changes will bring about a substantial shift in the size and the age composition of the population which will have significant impact on the global economy Despite potentially grave consequences demographic changes usually do not take center stage in many macroeconomic policy discussions or debates This paper illustrates how demographic variables move over time and analyzes how they influence macroeconomic variables such as economic growth inflation savings and investment and fiscal balances from an empirical perspective Based on empirical findings particularly regarding inflation we discuss their implications on macroeconomic policies including monetary policy We also highlight the need to consider the interactions between population dynamics and macroeconomic variables in macroeconomic policy decisions **Demographic Change and Long-Run Development** Matteo Cervellati, Uwe Sunde, 2017-10-27 Recent approaches to economic demography investigating the effect of the transition to low mortality and low fertility on economic development Over the last two hundred years mortality and fertility levels in the Western world have dropped to unprecedented levels This demographic transition was accompanied by an economic transition that led to widespread education and economic growth after centuries of near stagnation At the same time other

changes have occurred in family structures culture and the organization of society Economists have only recently begun to take into account the demographic transition from high mortality and high fertility when modeling and researching economic development This CESifo volume reviews recent approaches to economic demography considering such topics as the bio geographic origins of comparative development differences the role of health improvements and mortality decline as well as physiological familial cultural and social aspects After an overview of the study of demography and economic demography the chapters cover subjects including the Neolithic era and the period of the formation of states and social institutions longevity and economic growth household decision making and fertility land inequality education and marriage in nineteenth century Prussia and caste systems and technology in pre modern societies The book concludes with a call for further investigation of the institutional and social factors that influence demographics and economies suggesting that unified growth theory offers a potential approach to studying development Contributors Matteo Cervellati Francesco Cinnirella David de la Croix Carl Johann Dalgaard Matthias Doepke Elena Esposito Davide Fiaschi Tamara Fioroni Oded Galor Boris Gershman Erik Hornung Fabian Kindermann Nils Petter Lagerl f Holger Strulik Uwe Sunde David N Weil **Demographic Faces of Europe** Tomas Kucera, Olga V. Kucerova, Oksana B. Opara, Eberhard Schaich, 2012-12-06 Over the last decade Europe has experienced not only sweeping political economic and social changes but also turbulent demographic developments which will to a great extent influence the region its countries and their populations. The book presents a comprehensive overview of the recent demographic trends in the countries of Central and Eastern Europe focusing on such critical issues as fertility decline changes in mortality migration dynamics acceleration of population ageing and negative population growth The authors also discuss in what ways concerns with the population issues have evolved in relation to the specificity of national historical economic or cultural background and how these issues are being currently addressed and articulated by professional demographers governmental authorities and broader public community Change in Australia's Rural Landscapes Gary W. Luck, Digby Race, Rosemary Black, 2010-11-30 The distribution and re distribution of people across the landscape has signi cant implications for ecological economic and social dynamics Movement of people to urban centres mostly from rural landscapes especially in the developing world is a major global phenomenon This can result in the de population of rural landscapes Conversely population growth and a changing demographic pro le have been id ti ed for particular rural landscapes with notable examples from North America Europe and Australia Yet we know little of the factors that drive demographic changes in rural landscapes and even less about the implications of these changes This book examines broad and local scale patterns of demographic change in rural landscapes identi es some of the drivers of these changes using Australian case studies or comparisons between Australian and international contexts and outlines the implications of changes for society and the environment This book makes a valuable contribution to the literature because it adopts an integrated and interdisciplinary approach by explicitly linking

demographic change with environmental land use social and economic factors. This integrated approach was achieved by encouraging interaction among authors writing on similar topics to ensure coherency and complementarity among chapters and cross pollination of ideas and perspectives. Chapters are presented as interactive and rejective d cussions that address the ndings of other contributors yet each chapter contains enough background to stand alone as a unique contribution

Understanding Neighbourhood Dynamics Maarten van Ham, David Manley, Nick Bailey, Ludi Simpson, Duncan Maclennan, 2012-09-26 This rare interdisciplinary combination of research into neighbourhood dynamics and effects attempts to unravel the complex relationship between disadvantaged neighbourhoods and the life outcomes of the residents who live therein It seeks to overcome the notorious difficulties of establishing an empirical causal relationship between living in a disadvantaged area and the poorer health and well being often found in such places There remains a widespread belief in neighbourhood effects that living in a poorer area can adversely affect residents life chances These chapters caution that neighbourhood effects cannot be fully understood without a profound understanding of the changes to and selective mobility into and out of these areas Featuring fresh research findings from a number of countries and data sources including from the UK Australia Sweden and the USA this book offers fresh perspectives on neighbourhood choice and dynamics as well as new material for social scientists geographers and policy makers alike It enriches neighbourhood effects research with insights from the closely related but currently largely separate literature on neighbourhood dynamics The Routledge Handbook of African Demography Clifford O.
