**History of Science in Latin America: The Construction of an Intellectual Field (20th century)** María de la Paz Ramos-Lara, Luis Carlos Arboleda, 2024-12-23 This book provides a unique analysis of how the History of Science became institutionalized in Latin America during the last two decades of the 20th century. It examines the establishment of the first Latin American community in the History of Science and its connections with the international community and various international institutions such as the International Union of History and Philosophy of Science and Technology Division of History of Science and Technology IUHPST DHST. The authors are the same scholars who have been involved in several activities and strategies to professionalize and institutionalize this field in Latin America. They explore the impact of Western educational institutions and theoretical and methodological perspectives on the introduction of the History of Science in several Latin American nations. The book examines the two way movement of European scholars to Latin America and Latin American students mainly to France. At that time the organization of congresses in France Spain the United States and other European countries encouraged the participation of Latin American historians of science. Notable events include the Science and Empires congress in Paris 1990 the Ciencia descubrimiento y mundo colonial conference in Madrid 1991 and the International Congresses of History of Science and Technology ICHST. The authors refer to seven Latin Americans who signed the Declaration of Bucharest 1981 to promote the history of sciences in their countries. This initiative led to the establishment of the Latin American Society for the History of Science and Technology LASHST in 1982 under the leadership of Juan Jos Salda a director of Quipu and Cuadernos de Quipu. With his leadership existing national societies were reactivated and new ones were created up to ten in four years Argentina Brazil Colombia Mexico Chile Peru Venezuela Costa Rica Ecuador and Cuba. This effort internationally legitimized Latin American scientific practice culminating in celebrating the XXI ICHST in Mexico City in 2001. He founded the International Association for Scientific Cultural Diversity IASCUD and became the first Latin American to serve as Secretary General of IUHPST DHS from 2001 to 2005. Through his various actions and activities Salda a and the LASHST community were able to promote the institutionalization of the History of Science in Latin America. This book pays a well deserved tribute to his efforts.

y Houssay: reconciliando ciencia y tecnología en Argentina Carmelo José Felice (h). Este libro analiza la relación entre ciencia y tecnología en Argentina mostrando cómo eslabón crítico al sistema de patentes. La falta de tecnologías originales propias a pesar de un sostenido crecimiento científico por algunas se explica al escuchar en las raíces culturales de la herencia colonial española. También se muestra que las visiones de Perón y Houssay al crear las instituciones se basan en ciencia y tecnología del país son complementarias y solo trabajando juntas pueden beneficiar al país. Una análisis de las publicaciones de Houssay, Leloir, Milstein y Rabinovich entre otros brillantes científicos argentinos permite describir ejemplos prácticos de cómo obtener tecnología a partir de ciencia básica en temas que oscilan desde biología molecular hasta física cuántica. En un capítulo se muestran las regulaciones como influencers de la ciencia hasta el punto de obligar a redefinir planes de investigación. En otro capítulo se apoya la idea de que los jóvenes becarios e investigadores argentinos son los principales protagonistas del cambio. Los que pueden hacer despegar al país. En un capítulo crucial se presenta el problema de los investigadores que buscan crear empresas mostrando cómo estas acciones pueden ayudar al desarrollo argentino y cuál debe ser la actitud del estado al respecto. En el capítulo final se explica que la posición de las universidades frente al sistema de patentes debe ser con los pies en la tierra y la mirada en el cielo.

**La ciencia como calamidad** Marcelino Cereijido, 2012-01-01 La ciencia ya no es sólo un atributo ventajoso de nuestra especie sino que se ha constituido en un elemento indispensable de la supervivencia. Si la ciencia desapareciera hoy nosotros los descendientes de aquellas criaturas que no habían necesitado de ciencia moderna podríamos perecer porque ahora somos demasiado numerosos como para poder sobrevivir en las naciones modernas sin energía, abrigo, alimentos, medicina y tecnología derivados de la ciencia. Si tocáramos el planeta con una varita mágica que hiciera desaparecer la ciencia y todo lo producido por la ciencia y la tecnología en pocos días moriríamos al menos un 80% de la humanidad. Hoy la distribución desigual de la ciencia moderna entre los pueblos de la Tierra nos ha colocado al borde de la extinción. Este desastre puede ocurrir a causa de un aumento creciente del oscurantismo habitual que menoscaba esa ciencia de la cual ahora dependemos o porque el competidor pone en juego estrategias que arruinan el modelo que manejamos nosotros y nos fuerza a desempeñarnos en situaciones en las que nuestra manera de interpretar resulta poco menos que inservible. Con el estilo claro que caracteriza sus ensayos, Cereijido nos sugiere una serie de tareas que debemos emprender para mejorar y tratar de salir vivos de este trance.
