Recent Advances in Diagnostic Neuroradiology Ph.

Demaerel, 2013-12-20 Diagnostic neuroradiology is undergoing such rapid change that standard texts are quickly becoming outdated in important respects. Recent Advances in Diagnostic Neuroradiology is designed to complement the general textbooks of neuroradiology by documenting and discussing the progress that has been achieved. Following six introductory chapters, 26 important topics in brain and spinal imaging are discussed in detail with appropriate illustrations and a review of the most recent literature. Each of these topics has specifically been chosen in order to summarize recent developments and to document the state of the art in the field. This book, written by acknowledged experts in the field, will be of relevance and importance to all with an interest in neuroradiology. Image Processing in Radiology Emanuele Neri, Davide

Caramella, Carlo Bartolozzi, 2007-12-31 This book, written by leading experts from many countries, provides a comprehensive and up-to-date description of how to use 2D and 3D processing tools in clinical radiology. The opening section covers a wide range of technical aspects. In the main section, the principal clinical applications are described and discussed in depth. A third section focuses on a variety of special topics. This book will be invaluable to radiologists of any subspecialty. Imaging of the Pancreas Emil J. Balthazar, Alec J. Megibow, Roberto Pozzi

Mucelli, 2010-04-10 Using numerous high quality illustrations, this volume assesses strengths and limitations of techniques for the imaging of pancreatitis. Ultrasound, computed tomography, magnetic resonance imaging, and interventional imaging are considered separately in the settings of acute and chronic pancreatitis, with an additional section on imaging of complications. The significance of the imaging findings for clinical and therapeutic decision making is clearly explained, and protocols are provided to help obtain the best possible images. *Radiological Imaging of the Neonatal Chest*, 2002-07-10 As outlined by Dr V. Donoghue in her preface, recent

advances in the therapeutic management of neonates with low gestational age have resulted in a significantly higher survival rate and better outcome for these newborns. Lung and heart malformations or acquired diseases represent a major part of the life-threatening conditions in this group of critically ill patients, and radiological imaging is one of the main tools to define the appropriate therapeutic approach. This book not only provides an excellent update on the embryological and anatomical aspects of neonatal chest conditions but also offers a unique and comprehensive overview of our current knowledge and of recent progress in imaging techniques of the neonatal chest. Dr Donoghue has been successful in engaging a number of outstandingly qualified international experts to contribute to this work, and I would like to congratulate her on the excellent coordination and editing of this book. I am confident that this outstanding volume will meet with great interest not only from general as well as specialised paediatric radiologists but also from neonatologists and paediatricians. I hope it will enjoy the same success as many previous volumes in this series. Leuven ALBERT 1 BAERT Preface In the past two decades, there have been extraordinary advances in the treatment of critically ill neonates, resulting in improvements in their survival and a significant decrease in morbidity. Infants of very low gestational ages are now surviving. **Imaging of**

*Oncology for Cure and Palliation* R.G. Parker,N.A. Janjan,M.T. Selch,2013-06-29 Given that treatment with curative intent is possible in only one half of cancer victims and that such treatment frequently fails the majority of patients with cancer will require relief of symptoms and signs caused by their disease In this book the specific contribution of radiation therapy to palliation is considered within the context of multidisciplinary management Individual chapters are devoted to palliative radiation therapy for primary tumours and metastases at different sites The management of pain is discussed and chapters are also devoted to end of life care the management of complications of radiation therapy and useful medications This book will prove useful to radiation oncologists and medical students
