Rapid Methods And Automation In Microbiology And Immunology:

Rapid Methods and Automation in Microbiology and Immunology Antti Vaheri, Richard C. Tilton, Albert Balows, 2012-12-06

The current diagnostic methods for the great variety of microbial agents affecting health are clearly unsatisfactory. New important pathogens have emerged including the agent responsible for bovine spongiform encephalopathy. Moreover, there is an increasing need for more accurate microbial control of our environment and of the food and water we consume. What is needed are rapid, sensitive and reliable procedures which on the one hand should be suitable for automation and on the other hand presented in a cost effective version suitable for field use. Including new biochemical approaches such as polymerase chain reaction, recombinant gene products and synthetic peptides, these needs are discussed in these protocols of the RAMI 90 congress.

Rapid Methods and Automation in Microbiology and Immunology K.-O. Habermehl, 2012-12-06. Rapid progress in molecular biology, genetic engineering and basic research in immunology has opened up new possibilities for application to diagnostic procedures and to clinical research. In a short period a new era of diagnosis dawned covering nearly all fields of microbiology, immunology and food technology. In consequence of this rapid development, scientists of many disciplines are involved studying infections of humans, animals and plants or working in technical microbiology. The application of the newest findings of basic research to diagnostic work and to clinical research covers nearly all fields of microbiology and immunology. Moreover, it underlines the close relationship between diagnosis, therapy and epidemiology. An outstanding example of these connections is given by the recent development of hepatitis B vaccine. The discovery and identification of a non-cultivable agent by physicochemical and immunological methods were the heralds of a new era in the prevention of infectious diseases. This book provides an up-to-date comprehensive review of developments and future aspects in various fields. I am convinced that the authors have succeeded in furnishing a large variety of new ideas and possibilities. K. O. HABERMEHL. Microbiology Fergus Priest,2013-06-29 During the latter part of the last century and the early years of this century the microbiology of beer and the brewing process played a central role in the development of modern microbiology An important advance was Hansen s development of pure culture yeasts for brewery fermentations and the recognition of different species of brewing and wild yeasts The discovery by Winge of the life cycles of yeasts and the possibilities of hybridization were among the first steps in yeast genetics with subsequent far reaching consequences Over the same period the contaminant bacteria of the fermentation industries were also studied largely influenced by Shimwell s pioneering research and resulting in the improvement of beer quality Towards the end of the century the influence of brewing microbiology within the discipline as a whole is far less important but it retains an essential role in quality assurance in the brewing industry Brewing microbiology has gained from advances in other aspects of microbiology and has adopted many of the techniques of biotechnology Of particular relevance are the developments in yeast genetics and strain improvement by recombinant DNA techniques which are rapidly altering the way brewers view the most important microbiological components of the process yeast and fermentation *Biodeterioration* 7 D. Because of the magnificent response to the call for papers for the 7th International Biodeterioration Symposium held at Cambridge UK some difficulties have been experienced in the editing of these proceedings The numbers of papers submitted exceeded expectation and because of this it has been necessary to accommodate those not actually in the proceedings into the International Biodeterioration journal A small number of papers were not suitable for publication and were therefore eliminated Many authors disregarded the guidelines laid down for the length of submitted papers However every attempt has been made to accommodate the maximum number of contributions in the proceedings The original selection included those which most nearly conformed to the length requirement Even so this has meant in many cases cutting down the text eliminating tables and or illustrations and pruning the reference list When references have been trimmed a note has been included to the effect that an extended list may be obtained from the author senior author Where it was not possible to carry out these procedures without seriously altering the text and the import of the paper they have been included amongst those to be published in the journal International Biodeterioration The exceptions to the procedures outlined above are the invited review papers which have been presented in full Happily the authors have been conscientious in keeping to the guidelines laid down for these
