distribution or any other Perl distribution installed Perl Scripting for Computer Forensic Analysis Perl is an extremely useful and powerful tool for performing computer forensic analysis While there are applications available that let an examiner access acquired images and perform some modicum of visualization there are relatively few tools that meet the specific needs of a specific examiner working on a specific case This is where the use of Perl really shines through and becomes apparent Perl Scripting for Application Monitoring Working with enterprise level Windows applications requires a great deal of analysis and constant monitoring Automating the monitoring portion of this effort can save a great deal of time reduce system downtimes and improve the reliability of your overall application By utilizing Perl scripts and integrating them with the application technology you can easily build a simple monitoring framework that can alert you to current or future application issues
