The Relevance of Social Science for Medicine L. Eisenberg,A. Kleinman,2012-12-06 The central purpose of this book is to demonstrate the relevance of social science concepts and the data derived from empirical research in those sciences to problems in the clinical practice of medicine As physicians we believe that the biomedical sciences have made and will continue to make important contributions to better health At the same time we are no less firmly persuaded that a comprehensive understanding of health and illness an understanding which is necessary for effective preventive and therapeutic measures requires equal attention to the social and cultural determinants of the health status of human populations The authors who agreed to collaborate with us in the writing of this book were chosen on the basis of their experience in designing and executing research on health and health services and in teaching social science concepts and methods which are applicable to medical practice We have not attempted to solicit contributions to cover the entire range of the social sciences as they apply to medicine Rather we have selected key approaches to illustrate the more salient areas These include social epidemiology health services research social network analysis cultural studies of illness behavior along with chapters on the social labeling of deviance patterns of therapeutic communication and economic and political analyses of macro social factors which influence health outcomes as well as services

Health Behavior Sonya Bahar, 2013-11-11 HEALTH BEHAVIOR AS BASIC RESEARCH Health behavior is not a traditional discipline but a newly emerging interdisciplinary field. It is still in the process of establishing its identity. Few institutional or organizational structures, i.e. departments and programs, reflect it, and few books and journals are directed at it. The primary objective of this book is thus to identify and establish health behavior as an important area of basic research worthy of being studied in its own right. As a basic research area, health behavior transcends commitment to a particular behavior, a specific illness or health problem, or a single set of determinants. One way of achieving this objective is to look at health behavior as an outcome of a range of personal and social determinants rather than as a set of risk factors or as targets for intervention strategies directed at behavioral change. The book is thus organized primarily in terms of the size of the determinants of concern rather than in terms of specific health behaviors or specific health problems or conditions. With the first part of the book establishing working definitions of health behavior and health behavior research as basic frameworks, the second part moves from smaller to larger systems, informing the reader about basic research that demonstrates how health behavior is determined by personal, family, social, institutional, and cultural factors. These distinctions reflect some arbitrariness; the family, organizations, and institutions, for example, are social units.

Marginalization in Globalizing Delhi: Issues of Land, Livelihoods and Health Sanghmitra S. Acharya, Sucharita Sen, Milap Punia, Sunita Reddy, 2016-10-21 This book analyses how developmental projects in a globalizing Delhi have brought about neglect, exclusion, and alienation of certain sections of population while benefiting others. It discusses the physical, economic, and social displacement of people in the city in recent times, which has deprived them of their lands, livelihoods, and access to health care. In Delhi and the National Capital Region, beyond the obvious and apparent image of wide roads, flyovers, the metro rail network, high rises, and glittering malls, globalization has brought about skewed and uneven development. A growing middle class and a significant group of an extremely rich section of population steer the ways in which development strategies are planned and implemented. Furthermore, with government control reducing as is inevitable and consistent with a neoliberal policy framework, private players have entered not only the consumer goods sector but also basic goods and services such as agriculture, health, and education. This book explores the effects of such processes with a specific focus on equity on the marginalized sections of population in a globalizing megacity. It addresses the themes of land, livelihoods, and health as overarching, drawing upon their interlinkages. It traces the changes in the growth of the city in context of these themes and draws inferences from their interconnectedness to examine the current situation of development in Delhi.
