Rudolf Boehm And His School Of Pharmacologists:

Rudolf Boehm and His School of Pharmacologists Otto Kraye, 1998-01-01 **Discoveries in Pharmacological Sciences** Popat N. Patil, 2012 Since 1805 pure active therapeutic constituents were isolated and chemically characterized Parallel to these developments the science of human anatomy physiology biochemistry genetics and pharmacology has advanced New synthetic drugs were discovered The chemistry of perfumes and sensory functions including memory were elucidated The history of fascinating discoveries made by scientists of Nobel repute was documented Better testing methods were developed The causes of many diseases were better understood Drug laws were instituted a century ago The pharmaceutical industry flourished The text provides a panoramic view of the understanding of when where who how and why drugs were developed Educational aspects of teaching pharmacological sciences are reviewed The historical account will be invaluable to graduate students and creative scientists who can prepare for the future **Pharmacology of Purine and Pyrimidine Receptors** Kenneth A Jacobson, Joel Linden, 2011-06 This is an overview of the fast moving field of purinergic signalling through adenosine and ATP receptors Authors are the leading authorities in their fields Subject matter is important for understanding tissue protection Subject matter is of intense interest for new drug development

Glutamate and ATP at the Interface of Metabolism and Signaling in the Brain Vladimir Parpura, Arne Schousboe, Alexei Verkhratsky, 2014-09-18 ATP acts as main energy source and is pivotal for numerous signaling cascades both inside the cells by fuelling various transport systems and donating phosphate groups and between the cells by chemical transmission Similarly glutamate acts as an important molecule for both intercellular signaling through glutamatergic transmission and cell energetics by contributing to ATP production In this collection of chapters written by the leading experts in the field of cell metabolism and energetics intracellular signaling and neurotransmission we covered various aspects of the interfacing between these two fundamental molecules This book will be particularly useful for researchers students physicians and psychotherapists working in the field of neurobiology neurology and psychiatry **Purinergic Signalling in the Central Nervous System and its pharmacological importance in neurological and psychiatric illnesses.** Yong Tang, Patrizia Rubini, Beata Sperlagh, Henning Ulrich, 2024-01-26 This Research Topic aims to honour the 80th birthday of Professor Peter Illes who is a member of the European Academy of Sciences the founder first president of the German Purine Club and Honorary President of the Chinese Purine Club He established a worldwide co operation network on purinergic signalling and is an internationally recognized leader in the field We aim to collect research articles and reviews from friends colleagues and co operation partners of Dr Illes to showcase build on and develop research being achieved related to the physiological pathophysiological roles of purines in the central nervous system CNS Adenosine Triphosphate ATP is an intracellular energy storing molecule but may also reach the extracellular space where it participates in cell to cell signalling For this purpose ATP utilises a range of purinergic receptors activated either by ATP itself P2X receptors seven subtypes or

by ATP ADP and UTP UDP P2Y receptors 8 subtypes and finally via its enzymatic degradation product adenosine P1 A receptors 4 subtypes Purine nucleotides and nucleosides together with the whole plethora of receptors and degrading enzymes constitute the purinome This fascinating and extensive network exists both in the animal kingdom and in humans and is essential in regulating important physiological functions Disturbances in the network can lead to a variety of illnesses clinically associated with both neurological or psychiatric traits In recent years hope has arisen that pharmacological chemistry together with various newly developed methods will enable researchers to discover and design efficient drugs for treating these neurodegenerative and affective diseases

SCIENCE AND MEDICINE IN IMPERIAL RUSSIA Anatoly Bezkorovainy, 2018-05-30 The author's intention to write Science and Medicine in Imperial Russia was to acquaint the American medical and scientific professionals and hopefully the general public with the accomplishments of Russian scientists and physicians in the areas of their professions The author has limited his story to medicine chemistry and biology the areas of his extended experience American public's thinking due to a number of reasons is that Imperial Russia was a swamp to use President Trump's

expression in which nothing of medical or scientific importance has ever been discovered or developed This author of course thinks otherwise and presents in this volume an ample amount of evidence to show that in the fields listed above the accomplishments of the Russians were surprisingly numerous As an example one can cite the discoveries of Russian organic chemists especially at the Kazan University which arguably were exceeded only by the Germans

Insights in Cardiovascular and Smooth Muscle Pharmacology: 2023 Simon Lebek, Daniel Reichart, Yan Sanders, Line Pedersen, 2025-01-17 Cardiovascular diseases have evolved as the main cause of morbidity and mortality worldwide with the frequency expected to increase in the next coming years Cardiovascular disease summarizes a variety of different pathologies including but not limited to heart failure atrial and ventricular arrhythmias inherited cardiomyopathies or toxic cardiomyopathy e.g. alcoholic Plus the interaction with important comorbidities like for example sleep disordered breathing further reduces patients outcome Despite recent treatment advances especially in heart failure patients with reduced ejection fraction patients prognosis remains dramatically reduced necessitating new therapeutic strategies This could be achieved by patient individualized approaches optimized for the various cardiovascular disease entities and their comorbidities Therefore detailed understanding of each individual pathomechanism is required
