## Rules Of Green:

**Green Fiscal Rules? Challenges and Policy Alternatives** Francesca Caselli,Andresa Lagerborg,Mr. Paulo A Medas,2024-06-21 This paper studies the impact of green fiscal rules designed to protect climate related spending on debt dynamics Simulations of green rules that exempt green spending from the rule limits for an emergingmarket economy illustrate that they can lead to unsustainable debt dynamics when the net zero emissions goal is pursued mostly using spending based instruments e g investment and subsidies Or the rule would need to implicitly assume a large fiscal adjustment in the non green budget which would undermine its credibility It will be needed to build broad public consensus for a more comprehensive fiscal strategy that tackles the difficult policy tradeoffs that will be required and takes into account long term effects A more appropriate mix of climate policies including actively employing carbon pricing should be pursued within the overall setting of fiscal and debt objectives Developing green medium term fiscal frameworks would help to integrate climate change considerations into fiscal policy design in a more comprehensive manner

**Patent Law, Green Technology and Innovation** Ankit Singh,Yogendra Srivastava,2022-09-19 In the era of modern industrial regimes the role of technology in tackling climate change is pivotal International goals of climate change mitigation and sustainable development cannot be achieved without the contribution of new technologies At the same time the importance of patent protection and an efficient patent system that facilitates technology transfer among international frontiers cannot be overlooked Many patented technologies are either not accessible for further dissemination or do not hold much technical value Therefore advanced systems of collaborative innovation have been developed especially in the sector of green technology and green innovation The environmental concerns of the global community cannot be tackled by a single company person sector or country Innovation partnerships and collaborative research will play a vital role in combating global climate concerns and in determining the diffusion of green technologies for maximum impact This book argues that policy makers should encourage partnerships in technology rather than focusing on gaining investment and

access to green technology to encourage global technological giants to transfer their technology and knowledge to local entities It analyzes the relationship between patent protection green innovation and diffusion of green technology against the backdrop of climate change and severe climate crisis Taking an interdisciplinary approach to align patent law and green technology with the Sustainable Development Goals it examines the effects of patent protection technology transfer and compulsory licensing on the diffusion of green technologies while offering a systematic analysis of the relationship between patent protection green innovation and diffusion of green technology from a global perspective **Philosophical**

**Foundations of Criminal Law** R. A. Duff, Stuart Green, 2013-01-24 Twenty five leading contemporary theorists of criminal law tackle a range of foundational issues about the proper aims and structure of the criminal law in a liberal democracy The challenges facing criminal law are many There are crises of over criminalization and over imprisonment penal policy has become so politicized that it is difficult to find any clear consensus on what aims the criminal law can properly serve governments seeking to protect their citizens in the face of a range of perceived threats have pushed the outer limits of criminal law and blurred its boundaries To think clearly about the future of criminal law and its role in a liberal society foundational questions about its proper scope structure and operations must be re examined What kinds of conduct should be criminalized What are the principles of criminal responsibility How should offences and defences be defined The criminal process and the criminal trial need to be studied closely and the purposes and modes of punishment should be scrutinized Such a re examination must draw on the resources of various disciplines notably law political and moral philosophy criminology and history it must examine both the inner logic of criminal law and its place in a larger legal and political structure it must attend to the growing field of international criminal law it must consider how the criminal law can respond to the challenges of a changing world Topics covered in this volume include the question of criminalization and the proper scope of the criminal law the grounds of criminal responsibility the ways in which offences and defences should be defined the criminal process and its values criminal punishment the relationship between international criminal law and domestic criminal law Together the essays provide a picture of the exciting state of criminal law theory today and the basis for further research and debate in the coming years **Green Shipping Contracts** Pia Rebelo, 2024-08-22 This book applies a contract

governance theory to the implementation of decarbonisation objectives in the international maritime sector In doing so it provides an overview of how the network of contractual relationships that characterise commercial shipping can become effective sites of collaboration between shipping actors to improve upon energy efficiency and CO2 reduction To achieve this aim the book investigates and develops a set of contractual tools that can enable private actors to strengthen their commitments to net zero targets whether state mandated or voluntary and develop cooperative norms to guide decision making and contractual interpretation These mechanisms include contractual clauses and drafting considerations which can secure a desired outcome for contractual performance thereby managing climate risks and providing adequate remedy where

such risks materialise In a transnational sector such as shipping where contracts can exert greater influence on corporate decarbonisation efforts than international regulation the book challenges the traditional limitations of contract law and calls for a deeper integration of green principles into private relationships
