Miller, 2011-12-21 At once a pioneering study of evolution and an accessible and lively reading experience a book that offers the most convincing and radical explanation for how and why the human mind evolved Consciousness morality creativity language and art these are the traits that make us human Scientists have traditionally explained these qualities as merely a side effect of surplus brain size but Miller argues that they were sexual attractors not side effects He bases his argument on Darwin s theory of sexual selection which until now has played second fiddle to Darwin s theory of natural selection and draws on ideas and research from a wide range of fields including psychology economics history and pop culture Witty powerfully argued and continually thought provoking *The Mating Mind* is a landmark in our understanding of our own species

by taking it S L O W Welcome to Your Brain Sandra Aamodt, Sam Wang, 2008-03-04 Challenges popular myths while drawing on recent findings in neuroscience to offer insight into how the human brain actually works sharing additional information on a wide variety of topics from the brain's role in religious beliefs and ways of coping with jet lag to the differences between male and female brains The Evolution of Human Sociability Ron Vannelli, 2015-09-25 How do desires and fears motivate human sociability What effect do these motivators have on reproductive social and political behaviour And crucially how might we understand them separate from preconceived notions of design or higher morality Taking these questions as a focus this book examines human evolution with the emphasis on sexual selection and the evolution of a number of human psychological processes Exploring evolutionary sexual and maturational processes along with primate fossil and geological evidence Vannelli argues that human nature can be conceptualised as species typical desires and fears derived from sexual selection during human evolution and that these are major motivators of behaviour Presenting additional evidence from the anthropology of band societies along with material from group behaviour Vannelli highlights the importance of pair bonding friendship alliance behaviour vengeance seeking and interpersonal politics in social behaviour providing a unique interdisciplinary framework for understanding human nature and the evolution of human sociability

Human Brain Evolution Stephen Cunnane, Kathlyn Stewart, 2010-07-30 The evolution of the human brain and cognitive ability is one of the central themes of physical biological anthropology This book discusses the emergence of human cognition at a conceptual level describing it as a process of long adaptive stasis interrupted by short periods of cognitive advance These advances were not linear and directed but were acquired indirectly as part of changing human behaviors in other words through the process of exaptation acquisition of a function for which it was not originally selected Based on studies of the modern human brain certain prerequisites were needed for the development of the early brain and associated cognitive advances This book documents the energy and nutrient constraints of the modern brain highlighting the significant role of long chain polyunsaturated fatty acids LC PUFA in brain development and maintenance Crawford provides further emphasis for the role of essential fatty acids in particular DHA in brain development by discussing the evolution of the eye and neural systems This is an ideal book for Graduate students post docs research scientists in Physical Biological Anthropology Human Biology Archaeology Nutrition Cognitive Science Neurosciences It is also an excellent selection for a grad student discussion seminar **Reason in Revolt, Vol. II** Alan Woods, Ted Grant, 2003 The dialectical materialism of Marx is not only a useful philosophical method for understanding the processes of society but is also a powerful tool for the assessment of the scientific method according to Marxists Grant and Woods In Reason in Revolt they explain the philosophical basis of dialectical materialism and defend its practice using examples from current work in formal logic and physics They suggest that just as science provides confirmation of dialectical materialism so dialectical materialism helps demonstrate where science has lost its way They are especially critical of the injection of mysticism into current works of theoretical physics

Book News The present world situation suggests that the capitalist system is now reaching a similar impasse to the one reached earlier by Stalinism The crisis can be explained in quite scientific terms To do so however a knowledge of the Marxist method of dialectical and historical materialism is necessary Many blame the activities of the US President George W Bush But Mr Bush is only the unconscious agent of historical processes that he has inherited and the existence of which he does not suspect Paradoxically by acting in the way he has he is hastening the demise of the socio economic system he hopes to preserve Now America has the reputation of the most counter revolutionary force on earth but we may come to witness a very graphic example of the dialectic of history Ted Grant joined Britain s Independent Labour Party in 1934 His published writings include The Unbroken Thread 1989 Scotland Socialism or Nationalism 1992 Where is Britain Going 1995 and Russia from Revolution to Counter Revolution 1997 Woods is the author of Marxism in Our Time 1992 China in Crisis 1994 The Socialist Alternative to the European Union 1997 A New Stage in the Capitalist Crisis 1998 Indonesia the Asian Revolution Has Begun 1998 and Crisis in Russia the Free Market Failure

Science, Music, And Mathematics: The Deepest Connections (Second Edition) Michael Edgeworth McIntyre, 2023-08-02 Professor Michael Edgeworth McIntyre is an eminent scientist who has also had a part time career as a musician In this book he offers an extraordinary synthesis revealing the many deep connections between science music and mathematics He avoids equations and technical jargon The connections are deep in the sense of being embedded in our very nature rooted in biological evolution over hundreds of millions of years Michael guides us through biological evolution perception psychology and even unconscious science and mathematics all the way to the scientific uncertainties about the climate crisis He also has a message of hope for the future Contrary to popular belief he holds that biological evolution has given us not only the nastiest but also the most compassionate and cooperative parts of human nature This insight comes from recognizing that biological evolution is far more than a simple competition between selfish genes Instead he argues in some ways it is more like the turbulent eddying flow in a river or in an atmospheric jet stream a complex process spanning a vast range of timescales Professor McIntyre is a Fellow of the Royal Society of London FRS and has long been interested in how different branches of science can better communicate with each other and with the public His work harnesses aspects of neuroscience and psychology that point toward the deep lucidity principles that underlie skilful communication principles related to the way music works music of any genre This Second Edition sharpens the previous discussion of communication skills and their importance for today s great problems ranging from the widely discussed climate crisis to the need to understand the strengths and weaknesses of artificial intelligence

Neanderthals and Atlantis Andrew Welburn, 2024-11-25 Where do we come from The idea of human origins the whole pattern of prehistory has been through a revolution The long held Darwinian view purported to show how adopting an upright posture caused the gradual transition from animal to human That theory has fallen apart spectacularly Human orientation and equilibrium are now seen as a biological new beginning Characteristics such as social

complexity and artistic ability emerged with startling suddenness in a Stone Age cognitive explosion In place of Darwin an entirely new history has emerged a migration out of Africa and a Middle Eastern transformation Crucial to understanding this is the discovery of our mystical shamanic roots as shown in the cave paintings that dazzled Picasso It has become clear that the cognitive leap was a spiritual revolution Not least our supposed human uniqueness has been challenged by the Neanderthals whose heritage has been hidden for millennia In no sense crude ape men they were a highly intelligent culturally advanced people whose history long overlapped ours Without them human evolution would undoubtedly be very different Over one hundred years ago Rudolf Steiner spoke of two human types or species This book illustrates how many of Steiner's descriptions of human development coincide remarkably with emerging perspectives His evolutionary thinking about humanity's distinctive role can set scientific discoveries in a dramatic new light His concepts concerning rhythmic phases and transitions grounded in the formation and disintegration of continents give authentic scientific expression to the myth of Atlantis Welburn weaves Steiner's perspectives with contemporary research in this ground breaking work exploring the turning points of human consciousness In doing so he helps replace the search for man's animal connections with the need to re think the very meaning of being human

Life and Language Beyond Earth Raymond Hickey, 2023-09-21 Could we communicate with lifeforms on exoplanets This thought provoking book explores the likelihood of life and language beyond Earth

Marine Mammals: the Evolving Human Factor Giuseppe Notarbartolo di Sciara, Bernd Würsig, 2022-06-08 The seventh volume in the series Ethology and Behavioral Ecology of Marine Mammals describes aspects of the often complex relationship between humans and marine mammals From a primeval condition of occasional predators during the last century humans have become a major factor negatively affecting the status of most marine mammals through over hunting habitat encroachment and environmental degradation This has led to the extirpation of many marine mammal populations and even to the extinction of species However in parallel to this destructive drive since antiquity humanity has been influenced by a strong fascination for marine

mammals which contributes today to an increased human appreciation of the natural world admixed with widespread concern for its degrading condition The special status occupied by marine mammals in human imagination and affection stands in stark contrast with the current predicament of many populations still threatened by the doings of Homo sapiens a condition emblematic of the relationship of humanity with nature and key to understanding where humanity is heading

Reason in Revolt Alan Woods ,Ted Grant ,2015-12-15 The achievements of science and technology during the past century are unparalleled in history They provide the potential for the solution to all the problems faced by the planet and equally for its total destruction Allegedly scientific theories are being used to prove that criminality is caused not by social conditions but by a criminal gene Black people are alleged to be disadvantaged not because of discrimination but because of their genetic make up Of course such science is highly convenient to right wing politicians intent on ruthlessly cutting welfare In the field of theoretical physics and cosmology there is a growing tendency towards mysticism The Big Bang theory of the origin of the universe is being used to justify the existence of a Creator as in the book of Genesis For the first time in centuries science appears to lend credence to religious obscurantism Yet this is only one side of the story **Spark** John J. Ratey,2008-01-10 A groundbreaking and fascinating investigation into the transformative effects of exercise on the brain from the bestselling author and renowned psychiatrist John J Ratey MD Did you know you can beat stress lift your mood fight memory loss sharpen your intellect and function better than ever simply by elevating your heart rate and breaking a sweat The evidence is incontrovertible Aerobic exercise physically remodels our brains for peak performance In Spark John J Ratey M D embarks upon a fascinating and entertaining journey through the mind body connection presenting startling research to prove that exercise is truly our best defense against everything from depression to ADD to addiction to aggression to menopause to Alzheimer s Filled with amazing case studies such as the revolutionary fitness program in Naperville Illinois which has put this school district of 19 000 kids first in the world of science test scores Spark is the first book to explore comprehensively the connection between exercise and the brain It will change forever the way you think about your morning run or for that matter simply the way you think A Mind So Rare Merlin Donald,2002 Donald psychology Queen s University Canada challenges the prevailing view that seeks to explain away human consciousness and presents a theory on the origins of the modern mind He describes the cultural and neuronal forces that power human modes of awareness and proposes that the human mind is a hybrid product of the interweaving of the brain with an invisible symbolic web of culture to form a distributed cognitive network Using evidence from brain and behavioral studies of humans and animals he explains how an expansion of consciousness transcends the limitations of the mammalian mind and elaborates the foundations of self evaluation and self reflection c Book News Inc Not Saved Peter Sloterdijk,2017-05-23 One can rightly say of Peter Sloterdijk that each of his essays and lectures is also an unwritten book That is why the texts presented here which sketch a philosophical physiognomy of Martin Heidegger should also be characterized as a collected renunciation of exhaustiveness In

order to situate Heidegger's thought in the history of ideas and problems Peter Sloterdijk approaches Heidegger's work with questions such as If Western philosophy emerged from the spirit of the polis what are we to make of the philosophical suitability of a man who never made a secret of his stubborn attachment to rural life Is there a provincial truth of which the cosmopolitan city knows nothing Is there a truth in country roads and cabins that would be able to undermine the universities with their standardized languages and globally influential discourses From where does this odd professor speak when from his professorial chair in Freiburg he claims to inquire into what lies beyond the history of Western metaphysics Sloterdijk also considers several other crucial twentieth century thinkers who provide some needed contrast for the philosophical physiognomy of Martin Heidegger A consideration of Niklas Luhmann as a kind of contemporary version of the Devil's Advocate a provocative critical interpretation of Theodor Adorno's philosophy that focuses on its theological underpinnings and which also includes reflections on the philosophical significance of hyperbole and a short sketch of the pessimistic thought of Emil Cioran all round out and deepen Sloterdijk's attempts to think with against and beyond Heidegger Finally in essays such as Domestication of Being and the Rules for the Human Park which incited an international controversy around the time of its publication and has been translated afresh for this volume Sloterdijk develops some of his most intriguing and important ideas on anthropogenesis humanism technology and genetic engineering

The Watchman's Rattle Rebecca Costa, 2010-10-12 Why can't we solve our problems anymore Why do threats such as the Gulf oil spill worldwide recession terrorism and global warming suddenly seem unstoppable Are there limits to the kinds of problems humans can solve Rebecca Costa confronts and offers a solution to these questions in her highly anticipated and game changing book The Watchman's Rattle Costa pulls headline for today's news to demonstrate how accelerating complexity quickly outpaces that rate at which the human brain can develop new capabilities With compelling evidenced based on research in the rise and fall of Mayan Khmer and Roman empires Costa shows how that tendency to find a quick solutions leads to frightening long term consequence Society's ability to solve its most challenging intractable problems becomes gridlocked progress slows and collapse ensues A provocative new voice in the tradition of thought leaders Thomas Friedman Jared Diamond and Malcolm Gladwell Costa reveals how we can reverse the downward spiral Part history part social science part biology The Watchman's Rattle is sure to provoke engage and incite change

Human Evolution Beyond Biology and Culture Jeroen C. J. M. van den Bergh, 2018-10-18 A complete account of evolutionary thought in the social environmental and policy sciences creating bridges with biology

The Group Dimension Claire Bacha, 2024-07-24 The Group Dimension presents a thorough exploration of the history and theory of the group dimension particularly in the context of modern capitalist society The book traces the development of capitalism from feudalism where the first polis groups can be identified and describes the growth of the power of the state prescribed by John Maynard Keynes to form neoliberalism Bacha then explores the deep history of human groups examines how our brains are built for and by multibody

interactions and understandings and provides an overview of our knowledge of groups building on findings from group analysis The book concludes by exploring how an understanding of groups their facilitation and their consciousness redefines current individualistic and autistic freedom to build the new world through dialogue The Group Dimension will be essential reading for anyone involved in groups as practitioners or clients It will also be of interest to readers looking to learn more about groups in the context of modern politics social and liberation movements The Network of Life David P.

Mindell,2024-06-04 Why evolution is like a network not a family tree and why it matters for understanding the health of all living things In The Network of Life David Mindell explains why the conventional narrative of evolution needs to evolve Ever since Darwin evolution has largely been thought to work like a family tree in which species are related through a series of branching events But today a growing knowledge of the ways species share genetic materials in a process known as horizontal evolution has revealed that evolution is actually a network of shared genealogy in which species are more interconnected than previously thought In this book Mindell presents this new narrative of life s evolution and its profound implications for all life on Earth The Network of Life describes the drivers of horizontal evolution interbreeding and genetic recombination the merger of species horizontal gene transfer and coevolution The network view of evolution that emerges supports a new symbiotic theory of health which holds that the future health of humans other species and our shared environments depends on evolution and adaptation across life s network Difficult times lie ahead for many of Earth s species as climates and habitats transform At the same time new and altered life forms are arising and spreading in association with human activities We are also learning to reshape and create life by mimicking the mechanisms of horizontal evolution and we are coevolving with technology as we enhance our bodies brains and life spans The Network of Life shows why and how increasing our knowledge of horizontal evolution can provide critical lessons as we navigate our looming challenges
