Bigner, 1998-03-27 This 6th edition represents a comprehensive review of the pathology and biology of tumours which affect the nervous system Substantially enlarged and wholly revised to reflect the remarkable progress in the field this book will serve as an encyclopaedic guide to the growth of brain tumours for both practising and training neuropathologists Most significantly this edition now features eight new chapters on basic aspects of brain tumour genetics epidemiology growth factors invasion and metastasis neurocarcinogens and cellular and molecular immunology The diagnostic aspects of central nervous system tumours have been completely updated with three new chapters on cerebrospinal fluid cytopathology flow cytometry and DNA ploidy analysis and immunohistochemistry and

Now in two volumes the text has also been expanded to incorporate recent advances in the understanding of factors involved in the genesis and progression of primary malignant tumors in neuroimaging and in tumour classifications including the recently revised WHO classification system with emphasis placed on those factors identified with prognostic significance.

**The Ultrastructure of Human Tumours** Brian Eyden, S. Sankar Banerjee, Yongxin Ru, Paweł Liberski, 2014-02-12. The Ultrastructure of Human Tumours: Applications in Diagnosis and Research describes the core features as seen by transmission electron microscopy defining the different types of cellular differentiation in tumours; this is relevant for tumour nomenclature and diagnosis which in turn are important for tumour pathologists in their collaboration with oncologists for the treatment of cancer patients. The book is divided into 8 chapters. Following an introduction on technique and procedure there are chapters on epithelial tumours, melanocytic lesions, soft tissue and related tumours, lymphoma and leukaemia, CNS neoplasms and neuroendocrine and neuronal tumours. Each chapter includes an introductory text that puts the ultrastructural features in the context of classical pathology. The book includes many new findings and interpretations from well known tumours as well as ultrastructural information on several newly described tumour entities not dealt with in existing tumour ultrastructure monographs. The book will especially be of value to tumour pathologists who need to solve problem cases with the aid of electron microscopy but also to cancer research and tissue engineering scientists working to develop anti cancer and stem cell based therapies. However even those without access to electron microscopy may also benefit from this book since many of the images provide an explanation of the appearances of cells, tissues and tumours familiar to pathologists and scientists from light microscopy. In this respect it is hoped that this book will stimulate the wider use of electron microscopy in pathology. The book is comprehensively referenced, 680 pages long and lavishly illustrated with 757 figures. Dr Brian Eyden is Consultant Clinical Scientist and Dr S Sankar Banerjee is Consultant Histopathologist in the Department of Histopathology, Christie NHS Foundation Trust, Manchester, UK. Dr Yongxin Ru is Director of the Department of Electron Microscopy, Institute of Hematology and Blood Diseases Hospital, Tianjin, China. Paweł Liberski is Professor in the Department of Molecular Pathology and Neuropathology, Medical University of Poland.
