Russell W. Porter, Arctic Explorer, Artist, Telescope Maker Berton C. Willard, 1976 Was a member of the Fiala Ziegler Expedition 1903 1905 *Russell W. Porter, Arctic Explorer, Artist, Telescope Maker* Berton C. Willard, 1976 Was a member of the Fiala Ziegler Expedition 1903 1905 **The Arctic Diary of Russell Williams Porter** Russell Williams Porter, 1976 The author's narrative of his expeditions into the arctic with famous explorers such as Peary and Cook illustrated with his pencil sketches and watercolours **Astronomy and Astrophysics National Historic Landmark Theme Study** Harry A. Butowsky, 1989 **Prologue**, 1997 *The Greatest Show in the Arctic* P. J. Capelotti, 2016-05-06 In Gilded Age America Arctic explorers were fabulous celebrities assured of riches and near immortality so long as they reached the North Pole first Of the many attempts to meet that goal three American expeditions launched from the Russian archipelago of Franz Josef Land ended in abject failure their exploits consigned to near oblivion Even so these ventures the Wellman expedition 1898 99 the Baldwin Ziegler 1901 2 and the Fiala Ziegler 1903 5 have much to tell us about the personalities politics and economics of exploration in their day In *The Greatest Show in the Arctic* the first book to chronicle all three expeditions P J Capelotti explores what went right and what in the end went tragically wrong The cast of colorful characters from the Franz Josef Land forays included Walter Wellman a Chicago journalist and bon vivant running from debts his mistress and an illegitimate daughter Evelyn Briggs Baldwin a deranged meteorologist with a fetish for balloons and a passion for Swedish conserves and Anthony Fiala a pious photographer in search of God in the Arctic Featuring an international cast of supporting characters worthy of a three ring circus *The Greatest Show in the Arctic* follows each of the three expeditions in turn from spectacular feats of financing to their bitter ends Along the way the explorers accumulated considerable geographic knowledge and left a legacy of place names Through close study of the expeditions journals Capelotti reveals that the Franz Josef Land endeavors foundered chiefly because of poor leadership and internal friction not for lack of funding as historians have previously suspected Presenting tales of noble intentions novel inventions and epic miscalculations *The Greatest Show in the Arctic* brings fresh life to a unique and underappreciated story of American exploration **Millikan's School: A History of the California Institute of Technology** Judith Goodstein, 2020-10-19 In November 1891 wealthy former abolitionist and Chicago politician Amos Throop founded a thoroughly undistinguished small college in Pasadena California which he named after himself Millikan's School is the history of this institution that stands today at the pinnacle of world academics with 300 full time faculty nearly 1 000 undergraduate 1 250 graduate students and 39 Caltech and alumni Nobel Prize recipients Although Amos Throop the name of the college was changed to Caltech in 1920 could not have realized the importance of geography the fact that Pasadena lay at the foot of Mount Wilson was central to its success astronomer George Ellery Hale built his telescope there in 1902 the finest at that time in the world Later Hale joined the board of trustees of the struggling school and persuaded Arthur Amos Noyes former president of MIT and the nation's leading physical chemist to join him in

Pasadena The third member of Caltech's founding troika was renowned physicist Robert A. Millikan from the University of Chicago. The dedication of Caltech in 1920 and the proclamation of what it stood for in science and education set the stage for Millikan, who functioned as the school's president to bring the best and the brightest from all over the world. Theodore von Kármán in aeronautics, Thomas Hunt Morgan in biology, Paul Sophus Epstein in physics, Beno Gutenberg in seismology, Linus Pauling in chemistry to Pasadena to work in an ever larger number of areas in science and technology. The book also covers the funding, planning and construction of the 200 inch telescope on Palomar Mountain, Willy Fowler's work in nuclear astrophysics and the wartime rocket experiments that grew into the Jet Propulsion Laboratory (JPL), today the world leader in deep space exploration. Millikan's School presents an interesting and thoroughly reliable account of the astonishing change over a period of a few years of a small technical school in Pasadena, California, into one of the world's leading scientific institutions.

Linus Pauling In Millikan's School Judith Goodstein tells the remarkable story of the rise of Caltech. She details how Millikan, aided by Hale and Arthur Amos Noyes, America's leading physical chemist and another of Hale's inspired acquisitions, took a former trade school and forged from it a grandiose university among the orange groves. It would be impossible while reading Goodstein's lively account not to be impressed by the energy, drive and boundless enthusiasm of men like Millikan, Hale and Noyes, who had the bare-faced audacity to set about building an institute to rival the cream of the universities of Europe and America.

Marcus Chown New Scientist Goodstein's story is first and foremost the tale of three men: the astronomer George Ellery Hale, the chemist Alfred Noyes and the physicist Robert Millikan. It is the story of their attempts to transform an undistinguished little school founded in 1891 into a world-class scientific establishment. A useful book. Tony Rothman Science In Millikan's School the story of Throop University's transformation into Caltech is told with precision. Judith Goodstein's history offers a quick tour of the landmarks of science in the mid 20th Century and a glance at how pure science puts itself at the service of government, commerce and the military. Goodstein approaches her subject with a healthy sense of humor and an acute sense of academic politics. She tells a wonderful story about how Caltech lost to Princeton in a bidding war over the services of Albert Einstein, for example. To her credit, Goodstein asks the hard question: What is the best way to do science? Millikan's School offers enough hard data to enable us to come to our own conclusions.

Jonathan Kirsch Los Angeles Times A cleanly written, scientifically well-informed account of one of the world's foremost institutions for science and technology. Ed Regis Nature Relying on archival material, published secondary sources and interviews with institute scientists, Goodstein presents a highly readable account of Caltech's beginnings at the turn of the century, substantive, informative and a good read.

Rebecca S. Lowen Technology and Culture As a history of science, this book is well-crafted. Orderly in its flow, it is not only a tribute to Millikan but also places him within the development of physics as a field.

Andrew Rolle Southern California Quarterly A fascinating history that speaks to issues far larger than Cal Tech itself. This well-written and honest account, which witnesses the many cited instances of anti-Semitism in the scientific world, is both a good read and a

sobering reminder that big science and top schools are not brought by storks Carroll Pursell History of Education Quarterly The author focuses on the personalities and the research fields of the principal scientific figures The emphasis on personalities and capsule surveys of relevant scientific fields produce a book that can be apprehended by a wide audience Roger Geiger Isis This chronicle offers glimpses of the passion and drive that have motivated a roster of distinguished scientists Publishers Weekly A lively tale Goodstein s individual profiles are lean and candid her background on subjects as diverse as nuclear astrophysics seismology aeronautical design quantum mechanics and rocket fuel are crisp and understandable With a light style and meticulous documentation Goodstein has produced a tale worthy of her subject Marshall Robinson Foundation News A distinguished and uniquely American institution has found its chronicler and its chronicle in Judith Goodstein s thorough but compact story of Millikan s School The emergence of Caltech as a powerhouse of science and engineering and a makeweight in the technological advancement of 20th century industry is both beautifully and reliably presented Harry Woolf Institute for Advanced Study Princeton University *Theaters of Time and Space* Jordan Marche,2005-06-08 Every year millions of Americans visit planetariums and are captivated by their strikingly realistic portrayal of the night sky Today it is indeed difficult to imagine astronomy education without these magnificent celestial theaters But projection planetariums first developed in Germany have been a part of American museum pedagogy only since the early twentieth century and were not widespread until the 1960s In this unique social history former planetarium director and historian of science Jordan D March II offers the first complete account of the community of individuals and institutions that during the period between 1930 and 1970 made planetariums the popular teaching aids they are today March addresses issues such as the role of gender and social developments within the planetarium community institutional patronage and the popularization of science He reveals how at different times various groups including financial donors amateur scientists and government officials viewed the planetarium as an instrument through which they could shape public understanding and perceptions of astronomy and space science Offering an insightful wide ranging look into the origins of an institution that has fascinated millions *Theaters of Time and Space* brings new perspectives to how one educational community changed the cultural complexion of science helped shape public attitudes toward the U S space program and even contributed to policy decisions regarding allocations for future space research *American Astronomy* John Lankford,Ricky L.
