fascinating story of how porcelain became a vehicle for the transmission and assimilation of artistic symbols themes and designs across vast distances from Japan and Java to Egypt and England It not only illustrates how porcelain influenced local artistic traditions but also shows how it became deeply intertwined with religion economics politics and social identity Bringing together many strands of history in an engaging narrative studded with fascinating vignettes this is a history of cross cultural exchange focused on an exceptional commodity that illuminates the emergence of what is arguably the first genuinely global culture

Uncommon Thinking Babashola Chinsman,2007-02-08 When independence arrived in sub Saharan Africa in the early 1960s everyone was optimistic higher living standards would quickly follow But after almost half a century of intensive policy and institutional reforms and massive foreign grants and loans the condition of the majority has hardly improved Bad governance has been a key factor and must be rectified before the region can attain its aspirations But the need for reforms extends beyond African governments alone Some of the prescriptions donors enthusiastically promoted were flawed Others acted as disincentives to development Market principles backed with external aid mostly targeting humanitarian relief did not lay a solid foundation for growth The problem though is not with the basic principles but with the failure to apply them contextually The response to poverty the major challenge in the region is a typical case in point Conventional programmes try to mitigate the suffering of the poor only to keep them hovering at the edge of hardship A pragmatic response would recognize that poverty prevents an economy from operating at its full potential and would elicit action to bring the poor into mainstream economic activity Reducing poverty is no longer a magnanimous gesture because it makes good economic and business sense This uncommon perspective taking social realities in the region into account is the basis of the new strategies for policy and institutional reforms aid management and governance that are advanced It is not policies and strategies alone that need to be fixed Complex delivery processes need to be simplified Progress would not require a revolution but a gradual accumulation of small results interacting to produce big impact Most importantly development should be promoted as an activity people do for themselves With the right incentives people can organize themselves to beat the adversity of poverty

A Hybrid Imagination Andrew Jamison,Steen Hyldgaard Christensen,Lars Botin,2022-05-31 This book presents a cultural perspective on scientific and technological development As opposed to the story lines of economic innovation and social construction that tend to dominate both the popular and scholarly literature on science technology and society or STS the authors offer an alternative approach devoting special attention to the role played by social and cultural movements in the making of science and technology They show how social and cultural movements from the Renaissance of the late 15th century to the environmental and global justice movements of our time have provided contexts or sites for mixing scientific knowledge and technical skills from different fields and social domains into new combinations thus fostering what the authors term a hybrid imagination Such a hybrid imagination is especially important today as a way to counter the competitive and commercial hubris that is so much taken for granted in contemporary science

and engineering discourses and practices with a sense of cooperation and social responsibility The book portrays the history of science and technology as an underlying tension between hubris literally the ambition to play god on the part of many a scientist and engineer and neglect the consequences and a hybrid imagination connecting scientific facts and technological artifacts with cultural understanding The book concludes with chapters on the recent transformations in the modes of scientific and technological production since the Second World War and the contending approaches to greening science and technology in relation to the global quest for sustainable development The book is based on a series of lectures that were given by Andrew Jamison at the Technical University of Denmark in 2010 and draws on the authors many years of experience in teaching non technical or contextual knowledge to science and engineering students The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED supported by the Danish Strategic Research Council from 2010 to 2013 Table of Contents Introduction Perceptions of Science and Technology Where Did Science and Technology Come From Science Technology and Industrialization Science Technology and Modernization Science Technology and Globalization The Greening of Science and Technology Practical Matter Margaret C. Jacob, Larry Stewart, 2006-09-01 Margaret Jacob and Larry Stewart examine the profound transformation that began in 1687 From the year when Newton published his Principia to the Crystal Palace Exhibition of 1851 science gradually became central to Western thought and economic development The book aims at a general audience and examines how despite powerful opposition on the Continent a Newtonian understanding gained acceptance and practical application By the mid eighteenth century the new science had achieved ascendancy and the race was on to apply Newtonian mechanics to industry and manufacturing They end the story with the temple to scientific and technological progress that was the Crystal Palace exhibition Choosing their examples carefully Jacob and Stewart show that there was nothing preordained or inevitable about the centrality awarded to science It is easy to forget that science might have been stillborn or remained the esoteric knowledge of court elites Instead for better and for worse science became a centerpiece of Western culture **Discoveries and Inventions in Literature for Youth** Joy L. Clay Suzanne Staubach, 2013-09-03 More than a third of the houses in the world are made of clay. Clay vessels were instrumental in the invention of cooking wine and beer making and international trade. Our toilets are made of clay. The first spark plugs were thrown on the potter's wheel. Clay has played a vital role in the health and beauty fields. Indeed, this humble material was key to many advances in civilization, including the development of agriculture and the invention of baking, architecture, religion, and even the space program. In *Clay*, Suzanne Staubach takes a lively look at the startling history of the mud beneath our feet. Told with verve and erudition, this story will ensure you won't see the world around you in quite the same way after reading the book.

Charles Darwin, Geologist Sandra Herbert, 2005 Pleasure of imagination. I, a geologist, have an ill-defined notion of land covered with ocean former animals slowly cracking surface, a truly poetical form. Charles Darwin's Notebook M 1838. The early nineteenth century was a golden age for the study of geology. New discoveries in the field were greeted with the same enthusiasm reserved today for advances in the biomedical sciences. In her long-awaited account of Charles Darwin's intellectual development, Sandra Herbert focuses on his geological training, research, and thought, asking both how geology influenced Darwin and how Darwin influenced the science. Elegantly written, extensively illustrated, and informed by the author's prodigious research in Darwin's papers and in the nineteenth-century history of earth sciences, *Charles Darwin, Geologist* provides a fresh perspective on the life and accomplishments of this exemplary thinker. As Herbert reveals, Darwin's great ambition as a young scientist, one he only partially realized, was to create a simple geology based on movements of the earth's crust. Only one part of his scheme has survived in close to the form in which he imagined it: a theory explaining the structure and distribution of coral reefs. Darwin collected geological specimens and took extensive notes on geology during all of his travels. His grand adventure as a geologist took place during the circumnavigation of the earth by H. M. S. Beagle, 1831-1836, the same voyage that informed his magnum opus, *On the Origin of Species*. Upon his return to England, it was his geological findings that first excited scientific and public opinion. Geologists, including Darwin's former teachers, proved a receptive audience; the British government sponsored publication of his research, and the general public welcomed his discoveries about the earth's crust. Because of ill health, Darwin's years as a geological traveler ended much too soon; his last major geological fieldwork took place in Wales when he was only thirty-three. However, the experience had been transformative; the methods and hypotheses of Victorian-era geology Herbert suggests profoundly shaped Darwin's mind and his scientific methods as he worked toward a full-blown understanding of evolution and natural selection.

The Singularity

of Western Innovation Leonard Dudley, 2017-08-14 This book highlights the contribution of language standardization to the economic rise of the West between 1600 and 1860 Previous studies have been unable to explain why during this period almost all industrial innovation was confined to small areas around the main cultural centers of three Western states Britain France and the United States This book argues that Western Europe and its offshoots were the only Eurasian societies able to apply typography cheaply to their writing systems The emergence in the West of large networks of people able to communicate in standardized languages made possible the breakthroughs of the Industrial Revolution Military byproducts of three macro innovations the steam engine machine tools and interchangeable parts then constituted the West's toolbox for empire The book will appeal to readers seeking to explain how the West attained its unprecedented advance over Asia in the nineteenth century and why this lead has since proved temporary
