Lunar Orbiter Photographic Atlas Of The Near Side Of The Moon:

Lunar Orbiter Photographic Atlas of the Near Side of the Moon Charles Byrne, 2010-03-17 Removes the scanning artefacts and transmission imperfections to produce a most comprehensive and beautifully detailed set of images of the lunar surface To help practical astronomers all the photographs are systematically related to an Earth based view Organized to make it easy for astronomers to use enabling ground based images and views to be compared with the Orbiter photographs

The Far Side of the Moon Charles Byrne, 2007-12-06 The far side of the Moon also called the dark side of the Moon was unknown to humanity until the Luna and Lunar Orbiter pictures were returned to Earth This wonderful book contains beautiful photographs and newly assembled mosaic images of the far side of the Moon cleaned of transmission imaging stripes and processing artifacts by today's computer technology Byrne's superb analysis documents the appearance of the features of the far side with beautiful pictures from Lunar Orbiter Until now the far side Lunar Orbiter photos have only been available with strong reconstruction lines but appear here for the first time as complete photographs unmarred by imaging and processing artifacts

The Chang'E-1 Topographic Atlas of the Moon Chunlai Li, Jianjun Liu, Lingli Mu, Xin Ren, Wei Zuo, 2015-12-03 This atlas is based on the lunar global Digital Elevation Models DEM of Chang E 1 CE 1 and presents CCD stereo image data with digital photogrammetry The spatial resolution of the DEM in this atlas is 500m with horizontal accuracy of 192m and vertical accuracy of 120m Color shaded relief maps with contour lines are used to show the lunar topographical characteristics The topographical data gathered by CE 1 can provide fundamental information for the study of lunar topographical morphological and geological structures as well as for lunar evolution research

The Moon's Near Side Megabasin and Far Side Bulge Charles Byrne, 2014-02-01 Since Luna and Lunar Orbiter photographed the far side of the Moon the mysterious dichotomy between the face of the Moon as we see it from Earth and the side of the Moon that is hidden has puzzled lunar scientists As we learned more from the Apollo sample return missions and later robotic satellites the puzzle literally deepened showing asymmetry of the crust and mantle all the way to the core of the Moon This book summarizes the author's successful search for an ancient impact feature the Near Side Megabasin of the Moon and the extensions to impact theory needed to find it The implications of this ancient event are developed to answer many of the questions about the history of the Moon

Mapping of the Moon Zdenek Kopal, R.W. Carder, 2013-04-17 The aim of the present book has been to provide an outline the first of its kind of the history of the human efforts to map the topography of the surface of our satellite from the days of pre telescopic astronomy up to the present These efforts commenced modestly at the time when the unaided eye was still the only tool at the disposal of men interested in the face of our satellite and were continued since

for more than three centuries by a small band of devoted friends of the Moon in several countries. Many of these were amateur astronomers and almost all were amateur cartographers though some highly skilled in their art. The reader interested in the history of lunar mapping between 1600 and 1960 will find its outline in the first chapter of this book and can follow the way in which the leadership in the mapping of the Moon, the cradle of which stood in Italy, passed successively to France, Germany and eventually to the United States. All efforts described in this chapter were wholly superseded by subsequent developments since 1960, largely motivated by logistic needs of a grand effort which culminated with repeated manned landings on the Moon between 1969-1972, a feat which will remain for ever one of the glories of our century.

Selected U.S. Government Publications, 1972 **Atlas of the Gravity and Magnetic Fields of the Moon** Jaroslav Klokočník, Jan Kostelecký, Václav Cílek, Aleš Bezděk, Gunther Kletetschka, 2022-11-09. This book presents gravity aspects: gravity disturbance, Marussi tensor, two gravity invariants, their certain ratio, the strike angles and the virtual deformations which are computed and evaluated for the Moon using the recent static global gravity field model GRGM1200A to degree and order of 600 in spherical harmonic expansion. The magnetic anomaly model and surface topography from the LOLA mission are added. Results are shown for the whole Moon, for its segments around the Moon and as zooms for selected impact craters, maria and catenae; they are shortly interpreted and opened for further selenologic applications. The book contains information about the geology of the Moon together with basic information about the magnetic field mapping and topography models.

Early Exploration of the Moon Tom Lund, 2018-12-26. Luna 2, launched by the USSR in 1959, was the first spacecraft from Earth to land on the moon. That first voyage was followed by increasingly capable lunar exploration spacecraft from Russia and the United States. A total of 36 successful lunar exploration missions were conducted from 1959 to the last Apollo manned exploration in 1972 and the final travels of the Lunokhod lunar rover in 1973. Of all the missions that of Apollo 17 was the pinnacle of manned space exploration. Apollo 17 astronauts traveled 21 miles on the lunar surface in a dune buggy type vehicle, stopping frequently to explore and gather samples. The spacecraft that enabled lunar exploration were ingenious and reflected the best efforts of talented people working with the technology of the day. This book showcases the engineering involved in those incredible machines. The spacecraft covered and their missions are listed below: From the United States: Ranger (Photography en route to lunar impact), Lunar Orbiter (Photography of front and back side of moon), Surveyor (Soft landing, photography and soil analysis), Apollo (Manned exploration), Lunar Rover (expanded range). From the USSR: Luna 2 (Photography en route to lunar impact), Luna 3 (Photography of back side of moon on flyby), Luna 9 and 13 (Soft landing, photography and soil analysis), Luna 10, 11, 12, 14 (Photography from lunar orbit), Luna 16, 20, 24 (Soft landing, return of soil sample to Earth), Lunokhod 1, 2 (Lunar roving vehicle driven from Earth). L1: Planned manned lunar flyby but only flew unmanned. L3: Planned manned lunar landing but never flew to moon. To tell the story of these spacecraft, Tom Lund draws on over 40 years work on aircraft and spacecraft systems. He was technical lead for the landing radars for the Surveyor and

Apollo spacecraft and his practical experience is augmented by master's degrees in electrical engineering physics and business administration **Guide to U. S. Government Publications**, 1980 Observing the Moon Gerald

North, 2007-07-05 Written by an experienced and well known lunar observer this is a hands on primer for the aspiring observer of the Moon Whether you are a novice or are already experienced in practical astronomy you will find plenty in this book to help you raise your game to the next level and beyond In this thoroughly updated second edition the author provides extensive practical advice and sophisticated background knowledge of the Moon and of lunar observation It incorporates the latest developments in lunar imaging techniques including digital photography CCD imaging and webcam observing and essential advice on collimating all common types of telescope Learn what scientists have discovered about our Moon and what mysteries remain still to be solved Find out how you can take part in the efforts to solve these mysteries as well as enjoying the Moon's spectacular magnificence for yourself **Monthly Catalog of United States Government**
