Holgate,1995-10-18 Immunopharmacology represents the boundary between the immune system and chemical mediators of the inflammatory and neuroendocrine responses The subject as applied to the respiratory system embraces most of the common non malignant lung diseases of which asthma and allied disorders are the most prevalent An

understanding of the underlying mechanisms of the disorders provides rationale for prevention and drug treatment as well as creating opportunities for novel drug development Immunopharmacology of Respiratory System embraces all of these principles and should enable the reader to become rapidly updated in an area of medical importance Focuses on aspects of disease pathogenesis that are common to a variety of lung disorders Includes coverage of the mechanisms of asthma origin progression and novel therapeutic interventions This volume is another in the Systems section of the Handbook of Immunopharmacology

TLR4-Dependent Homeostasis and Immunopathology: Focus on Cross-talk With Other Signaling Pathways Jerrold Weiss, 2022-11-11 *Anatomy and Physiology of the Circulatory and Ventilatory Systems* Marc Thiriet, 2013-11-27 Together the volumes in this series present all of the data needed at various length scales for a multidisciplinary approach to modeling and simulation of flows in the cardiovascular and ventilatory systems especially multiscale modeling and coupled simulations The cardiovascular and respiratory systems are tightly coupled as their primary function is to supply oxygen to and remove carbon dioxide from the

body's cells. Because physiological conduits have deformable and reactive walls, macroscopic flow behavior and prediction must be coupled to nano and microscopic events in a corrector scheme of regulated mechanism. Therefore, investigation of flows of blood and air in physiological conduits requires an understanding of the biology, chemistry, and physics of these systems together with the mathematical tools to describe their functioning in quantitative terms. The present volume focuses on macroscopic aspects of the cardiovascular and respiratory systems in normal conditions, i.e., anatomy and physiology, as well as the acquisition and processing of medical images and physiological signals.
