graphical information in documents either from paper or electronic formats Topics of interest for the graphics recognition community are vectorization symbol recognition analysis of graphic documents with a grammatic notation like electrical diagrams architectural plans engineering drawings musical scores maps etc graphics based information retrieval performance evaluation in graphics recognition and systems for graphics recognition In addition to the classic objectives in recent years graphics recognition has faced up to new and promising perspectives some of them in conjunction with other scientific communities Examples of that are sketchy interfaces and on line graphics recognition in the framework of human computer interaction or query by graphic content for retrieval and browsing in large format graphic documents digital libraries and Web applications Thus the combination of classic challenges with new research interests gives the graphics recognition field an active scientific community with a promising future

Mathematical Foundations Of Parallel

Computing V V Voevodin, 1992-03-24 Parallel implementation of algorithms involves many difficult problems In particular among them are round off analysis the way to convert sequential programs and algorithms into the parallel mode the choice of appropriate or optimal computer architecture and so on To solve these problems it is necessary to know very well the structure of algorithms This book deals with the mathematical mechanism that permits us to investigate structures of both sequential and parallel algorithms This mechanism allows us to recognize and explain the relations between different methods of constructing parallel algorithms the methods of analysing round off errors the methods of optimizing memory traffic the methods of working out the fastest implementation for a given parallel computer and other methods attending the joint investigation of algorithms and computers

Multisensor Surveillance Systems Gian Luca Foresti, Carlo S. Regazzoni, Pramod K. Varshney, 2012-12-06 Monitoring of public and private sites is increasingly becoming a very important and critical issue especially after the recent flurry of terrorist attacks including the one on the World Trade Center in September 2001 It is therefore imperative that effective multisensor surveillance systems be developed to protect the society from similar attacks in the future The new generation of surveillance systems to be developed have a specific requirement they must be able to automatically identify criminal and terrorist activity without sacrificing individual privacy to the extent possible Privacy laws concerning monitoring and surveillance systems vary from country to country but in general they try to protect the privacy of their citizens Monitoring and visual surveillance has numerous other applications It can be employed to help invalids or handicapped and to monitor the activities of elderly people It can be used to monitor large events such as sporting events as well Nowadays monitoring is employed in several different contexts including transport applications such as monitoring of railway stations and airports dangerous environments like nuclear facilities or traffic flows on roads and bridges The latest generation of surveillance systems mainly rely on hybrid analog digital or completely digital video communications and processing methods and take advantage of the greater flexibility offered by video processing algorithms that are capable of focusing a human operator's
