Making Good Choices About Nonrenewable Resources Paula Johanson, 2009-08-15 Helps teens become proactive about nonrenewable resources by presenting facts and tips

Analyzing Nonrenewable Resource Supply Douglas R. Bohi, Michael A. Toman, 2015-09-16 Originally published in 1984 Douglas A Bohi and Michael A Toman have produced a convenient reference source about disparate elements in the theory of nonrenewable resource supply and about general issues that arise when applying dynamic economic analysis The authors emphasise the inherently dynamic nature of resource supply decisions the effects of resource depletion on costs and behaviour and the influence of uncertainty about costs prices and reserves This title will be useful to students interested in environmental studies and economics practitioners and others who need to know more about complex interactions of economic forces and the resource base

Nonrenewable Resources and You Nicholas Faulkner, Paula Johanson, 2018-07-15 The many natural resources we use in daily life such as fossil fuels are not unlimited which readers will discover from this enlightening book They will also learn about the lasting effects of using up Earth's nonrenewable resources and what this means for both the planet and all of us Most importantly however this book shows that there are alternatives to nonrenewable resources such as solar power which the world is trending toward now A thoughtful Myths and Facts section and 10 Great Questions to Ask a Science Teacher will engage readers to be more environmentally aware

System Zoo 3 Simulation Models Hartmut Bossel, 2007 About the book Mathematical modeling and computer simulation make it possible to understand and control the dynamic processes taking place in complex systems Simulation provides insights into the often surprising diversity of possible behaviors and allows identifying possibilities for intervention and options for alternative development About one hundred simulation models from all areas of life are fully documented in the three volumes of the System Zoo They can be quickly implemented and easily operated using freely available system dynamics software Volume 3 of the System Zoo contains simulation models of economic and social systems and global development among them production stocks and orders marketing and consumption competition life planning employment ecotax escalation dependence aggression population and community development debt crisis globalization the world models of the Club of Rome by Forrester and the Meadows group and examples of nonnumerical knowledge processing applied to impact assessment and decision processes The System Zoo collection of simulation models is particularly well suited for teaching training and research projects at all levels from high school to university and for individual study Volume 1 of the System Zoo contains simulation models of elementary systems and of systems from the fields of physics and engineering Volume 2 of the System Zoo presents simulation models related to climate vegetation ecosystems and resources About the author Hartmut Bossel is Professor Emeritus of environmental systems analysis He taught for many years at the University of California in Santa Barbara and the University of Kassel Germany where he was director of the Center for Environmental Systems Research until his retirement He holds an engineering degree from the Technical University of

Darmstadt and a Ph D degree from the University of California at Berkeley With a background in engineering systems science and mathematical modeling he has led many research projects and future studies in different countries developing computer simulation models and decision support systems in the areas of energy supply policy global dynamics orientation of behavior agricultural policy and forest dynamics and management He has written numerous books on modeling and simulation of dynamic systems social change and future paths and has published widely in the scientific literature in several fields

Resource Economics Jon M. Conrad,1999-10-28 The book covers basic concepts shows how to set up spreadsheets to solve dynamic allocation problems and presents economic models for various industries

An Analysis of Cartelized Market Structures for Nonrenewable Resources Robert A. Marshall,2017-10-17 Originally published in 1979 While the theory of non renewable resources under competitive and monopolistic market regimes have been relatively well developed almost no attention has been given to the development of a theoretical framework for analysis of the spectrum of mixed market structure between those extremes The world oil market structure is an example of such an intermediate market structure The purpose of this title is to develop such a theoretical framework The study examines non renewable resource markets in which a profit maximizing producer cartel co exists with a non cartel supply sector which is alternately modelled as consisting of a collection of competitive firms or as exhibiting other exogenously assumed supply behaviours This title will be of interest to students of environmental economics

Climate Policy and Nonrenewable Resources Karen Pittel,Rick Van Der Ploeg,Cees Withagen,2014-08-22 A detailed and rigorous analysis of the effect of climate policies on climate change that questions the empirical and theoretical support for the green paradox Recent developments suggest that well intended climate policies including carbon taxes and subsidies for renewable energy might not accomplish what policy makers intend Hans Werner Sinn has described a green paradox arguing that these policies could hasten global warming by encouraging owners of fossil fuel reserves to increase their extraction rates for fear that their reserves will become worthless In this volume economists investigate the empirical and theoretical support for the green paradox Offering detailed and rigorous analyses of the forces and assumptions driving Sinn s argument the contributors consider whether rising carbon tax rates inevitably speed up climate change the effects of the design of resource markets the availability of clean substitutes and the development of new technologies and the empirical evidence or lack thereof for the green paradox result They consider extraction costs sustainability and innovation timing announcement effects and time consistency in relation to policy measures and empirical results for the green paradox phenomena under several alternative policy measures Contributors Julien Daubanes Corrado Di Maria Carolyn Fischer Florian Habermacher Michael Hoel Darko Jus Gebhard Kirchgassner Ian Lange Pierre Lasserre Volker Meier Karen Pittel Stephen Salant Frank St hler Gerard van der Meijden Frederick van der Ploeg Edwin van der Werf Ngo Van Long Ralph A Winter Cees Withagen

Natural Resource Economics Jon M. Conrad,Daniel Rondeau,2020-01-30 Mathematical analysis is key to the modeling and management of natural resources By

presenting required mathematical methods classic dynamic models for non renewable and renewable resources and by exploring several contemporary problems this text provides a foundation for advanced research Topics include seminal models in fishery forestry and non renewable resource management as well as an extensive collection of contemporary applications that include the optimal transition from fossil fuels to clean energy the optimal timing of interventions to save endangered species pest control and the optimal management of antibiotic resistance Deterministic and stochastic models in both discrete and continuous time are covered The book encourages students to pursue a deeper understanding of the analytics of resource problems and to deploy numerical methods when analytical results prove intractable The combination of analysis theory and applications will launch the next generation of resource economists while serving as a useful reference for established researchers

Foundations of Dynamic Economic Analysis Michael R. Caputo, 2005-01-10 Foundations of Dynamic Economic Analysis presents a modern and thorough exposition of the fundamental mathematical formalism used to study optimal control theory i e continuous time dynamic economic processes and to interpret dynamic economic behavior The style of presentation with its continual emphasis on the economic interpretation of mathematics and models distinguishes it from several other excellent texts on the subject This approach is aided dramatically by introducing the dynamic envelope theorem and the method of comparative dynamics early in the exposition Accordingly motivated and economically revealing proofs of the transversality conditions come about by use of the dynamic envelope theorem Furthermore such sequencing of the material naturally leads to the development of the primal dual method of comparative dynamics and dynamic duality theory two modern approaches used to tease out the empirical content of optimal control models The stylistic approach ultimately draws attention to the empirical richness of optimal control theory a feature missing in virtually all other textbooks of this type

Project Scheduling under Limited Resources Sönke Hartmann, 2012-12-06 Approaches to project scheduling under resource constraints are discussed in this book After an overview of different models it deals with exact and heuristic scheduling algorithms The focus is on the development of new algorithms Computational experiments demonstrate the efficiency of the new heuristics Finally it is shown how the models and methods discussed here can be applied to projects in research and development as well as market research

Fiscal Adjustment for Stability and Growth Mr. James Daniel, 2006-08-17 The pamphlet which updates the 1995 Guidelines for Fiscal Adjustment presents the IMF's approach to fiscal adjustment and focuses on the role that sound government finances play in promoting macroeconomic stability and growth Structured around five practical questions when to adjust how to assess the fiscal position what makes for successful adjustment how to carry out adjustment and which institutions can help it covers topics such as tax policies debt sustainability fiscal responsibility laws and transparency

Environmental and Natural Resource Economics Jonathan M. Harris, Brian Roach, 2017-06-26 Environmental issues are of fundamental importance and a broad approach to understanding the relationship of the human economy and the natural world is essential In a rapidly changing policy and scientific context this new edition of Environmental and Natural Resource Economics reflects an updated perspective on modern environmental topics Now in its fourth edition this book includes new

Project Scheduling with Time Windows and Scarce Resources Klaus Neumann, Christoph Schwindt, Jürgen Zimmermann, 2013-06-29 A project is a unique undertaking or endeavor to be accomplished that can be divided into individual subtasks or activities each of which requires time and scarce resources for its completion Also there is a desired objective to be attained for example minimization of project duration or of variation of resource utilization or maximization of net present value of the project Moreover there are given precedence relationships among activities prescribing the order in which activities must be carried out Project scheduling in its basic form consists of finding start times for all activities such that prescribed resource and precedence constraints are satisfied and an objective function is optimized Since the concept of a project can be interpreted quite broadly project scheduling problems arise in a great variety of practical situations These include construction work the development and introduction of new products service systems or software packages strategic long term planning in manufacturing and the service sector emergency planning and even the conducting of political campaigns Recently project scheduling has been successfully applied to production and operations management e.g. make to order production in manufacturing and batch production in process industries Since the late 1950s network based planning methods for project scheduling problems have been developed cf Elmaghraby 1977 and Moder et al

Toward Sustainable Development Philip Andrew Lawn, 2000-07-28 By now most people in the ecological and environmental fields have heard of sustainable development but how many know how we go about getting there and if we are achieving it By synthesizing the many disparate elements of the field of Ecological Economics *Toward Sustainable Development An Ecological Economics Approach* combines analysis theory and empiricism to answer the whats whys and hows of moving towards sustainable development Since the ecological economics approach to sustainable development is still a relatively new paradigm its long term success rests heavily on the formalized establishment of the most basic and fundamental principles This volume discusses the formation of these principles and their implementation in the real world Lawn establishes the ground rules by showing that development need not be achieved at the expense of ecological sustainability He presents the tools guidelines and conceptual framework necessary to move toward sustainable development Filled with figures tables and illustrations *Toward Sustainable Development An Ecological Economics Approach* systematically develops a conceptual framework from which to design workable policies The author shows that development and ecological sustainability don't have to be trade offs but can be complementary and outlines a range of economic and non economic indicators to measure performance

Environmental and Natural Resource Economics Jonathan M. Harris, Brian Roach, 2021-11-28 Environmental issues

are of fundamental importance and a broad approach to understanding the relationship between the human economy and the natural world is essential. In a rapidly changing policy and scientific context, this new edition of *Environmental and Natural Resource Economics* reflects an updated perspective on modern environmental topics. Now in its fifth edition, this textbook includes enhanced and updated material on energy, climate change, greening the economy, population, agriculture, forests, and water, reflecting the greater urgency required to solve the big environmental problems in these areas. It introduces students to both standard environmental economics and the broader perspective of ecological economics, balancing analytical techniques of environmental economics topics with a global perspective on current ecological issues such as population growth, global climate change, and green national income accounting. Harris and Roach's premise is that a pluralistic approach is essential to understand the complex nexus between the economy and the environment. This perspective, combined with its emphasis on real-world policies, is particularly appealing to both instructors and students. This is the ideal text for undergraduate classes on environmental, natural resource, and ecological economics, and postgraduate courses on environmental and economic policy.
